## Terminology

### Geo ID numbers

For State and County tables: The first two digits represent the state FIPS code; the last three digits represent the county FIPS code.

### Confidence Interval

A confidence interval is a range of values that, with some level of certainty, contains the true value the estimate is approximating. For example, each state and county estimate is listed with a 90 percent confidence interval. This means that for a particular estimate, if we carried out our estimation procedure and created a confidence interval 100 times, the actual value that the estimate is approximating is in that interval approximately 90 out of the 100 times.
