DRAFT

1. Introduction

The centennial of Daniel Burnham's and Edward Bennett's *Plan of Chicago* has given us an opportunity to revisit the impact of that plan on our region. It also should challenge us to think about our long-term future. How will future generations look back on the choices that we are making today?

Thinking about our region's future raises many critical questions. What businesses will drive our economy, and what types of employment will be available? How will our transportation system function? Will we have clean air and water? How will we accommodate growth and demographic change? The answers depend on how we respond to challenges facing the region. Today's policy and investment choices will determine quality of life for decades to come.

One of metropolitan Chicago's foremost challenges is to prosper in the rapidly changing global economy. As parts of the economy grow, shrink, or disappear entirely, we must continually reinvent ourselves as a region, continue to retain and attract jobs and businesses, and keep our place as a global economic center. Maintaining a strong and diverse economy brings its own set of challenges. Our infrastructure – including transportation, housing, water, wastewater, stormwater, open space, energy, and telecommunications systems – needs to be maintained and improved to sustain the current economy and allow it to adapt and expand. To achieve sustainable prosperity and continue to attract high-quality jobs to our region, we also must ensure that none of our residents are left behind as the economy and social systems adapt to change.

Reducing consumption of natural resources must also be a high priority. To help create a sustainable future, we must limit our emissions of greenhouse gases – the chemicals that cause climate change – and also be prepared to adapt to a future in which climate change has occurred. We must address our energy supply and demand, by embracing clean energy sources and by reducing consumption. Also, our region's demand for water continues to increase, while supplies do not; if current trends continue, parts of the region could face water shortages by 2040.

The resources to achieve our goals are finite. Every decision requires trade-offs, every expenditure has "opportunity costs," and every policy has consequences. Especially in today's daunting economic climate, we must ensure that policies and investments make the best possible use of public and private funds.

In short, the region has difficult decisions to make, and the need for action is clearly immediate. Many of today's challenges are the result of policy decisions made -- or deferred -- in past decades. Yet the benefits of effective planning can actually emerge quite rapidly when the will to implement those plans is strong.

As a region, we must seize this moment. And with its *GO TO 2040* plan, the Chicago Metropolitan Agency for Planning (CMAP) is prepared to lead. *GO TO 2040* is the region's long-range comprehensive plan to link transportation, land use, the natural environment, economic prosperity, housing, and human and community development. This preferred Regional Scenario builds on the Regional Vision and on many months of research and public input. It provides the clear path toward completion and implementation of the first truly comprehensive regional plan for northeastern Illinois.

2. The preferred Regional Scenario's role in *GO TO 2040*

To meet its many challenges, our region needs to carefully choose and implement policies and investments that will lead to positive results, both now and well into the future. The long-range, comprehensive *GO TO 2040* plan is meant to do just this for metropolitan Chicago. Led by the Chicago Metropolitan Agency for Planning (CMAP), which was formed in 2005 to integrate transportation and land use planning in the region, the *GO TO 2040* plan will set the course to sustain our region's prosperity through 2040 and beyond.

This report is an important interim product of the *GO TO 2040* plan. It describes the *GO TO 2040* preferred Regional Scenario, which is a combination of actions that will prepare the region to achieve its goals for 2040. The scenario goes beyond the broad goal statements of the Regional Vision by identifying in more detail the best course of action to reach the vision's goals. But it does not go so far as recommending specific policies, investments, and implementation responsibilities; that level of detail will be stated in the full *GO TO 2040* plan.

While the future cannot be predicted with certainty, CMAP's analysis and outreach indicate that if the preferred Regional Scenario becomes our region's reality, it will bring substantial quality-of-life benefits. Infrastructure will be more effective to use and efficient to maintain. The economy will be stronger, and public costs will be contained. The environment will be healthier, and pressure on natural resources will be eased. The region as a whole will be a more equitable place to live and work.

To attain this future, our region must focus on the policies and investments that matter most. We need to:

- Create more compact, mixed-use, livable communities to serve as the building blocks of our region's future development.
- Invest more effectively in education and workforce development, while fostering a business climate that encourages job growth and innovation by the private sector.
- Improve the region's high-quality system of parks and open space, while using conservation measures to reduce our consumption of energy and water.
- Plan multi-modally for transportation and target transportation investments to achieve outcomes such as economic growth, environmental protection, or congestion reduction, while finding more sustainable ways to finance infrastructure improvements.
- Track our region's performance to assess where to make improvements to reach the desired future.

These priorities are described in more detail later in this report, and they will be at the core of implementing the *GO TO 2040* plan.

Many communities and other organizations around the region are already working toward these goals and have made substantial progress toward achieving them. These significant and important efforts will be highlighted in the full plan. In seeking to implement the priorities of *GO TO 2040*, it is important to recognize that the plan builds on past and ongoing work by many other groups.

Building on the Regional Vision

The preferred Regional Scenario builds on the Regional Vision that CMAP put forth in June 2008. The Regional Vision describes where our region should be in 2040, organized by themes such as quality of life, economic competitiveness, environment, and many others. During the 18 months since it was adopted, CMAP and its partners have carried out intensive research and analysis of potential implementation strategies, while also conducting extensive public outreach to get residents' and stakeholders' views for how they would implement the vision. While regional unanimity isn't possible, the public feedback has been extremely supportive of the general implementation strategies under consideration, with most residents clearly wanting better transit, more compact development, and preservation of natural resources.

To take the *GO TO 2040* plan to completion and implementation, this preferred Regional Scenario is the next major step, in which CMAP is articulating the strategies the region should pursue to make its Regional Vision a reality. In addition to extensive, thoughtful input from residents and stakeholders, the research that underpins these policy directions has been rigorous. It includes more than three dozen in-depth strategy papers (http://www.goto2040.org/strategy_papers.aspx), authored by CMAP and its partners on topics suggested by the Regional Vision. CMAP also continues to publish a series of Regional Snapshot reports (<http://www.cmap.illinois.gov/snapshot.aspx>) that analyze broad areas requiring further in-depth study, such as the jobs-housing balance, air quality, the Latino population, infill, and more. Ongoing work includes an analysis of regional taxation issues and a study of infrastructure and economic development as it relates to the freight industry. CMAP also continues developing the Regional Indicators project (<http://www.goto2040.org/indicators.aspx>), a close partnership with The Chicago Community Trust to establish metrics to predict and measure progress by the region and its communities in implementing the Regional Scenario and Vision.

The next section briefly recaps the Regional Vision's central themes and how each relates to policy directions in the preferred Regional Scenario.

Regional Vision themes and Regional Scenario policy directions

The *GO TO 2040* Regional Vision describes our desired future in terms of the region's **quality of life**, **natural environment**, **social systems**, **economy**, and **governance**. The economy theme contained a section on **transportation** that is also treated as a separate theme below. Throughout all of these vision themes, three other cross-cutting issues recur: **sustainability**, **equity**, and **innovation**.

Vision Theme: Quality of Life. The Regional Vision describes a future quality of life based on “attractive, interdependent communities” that offer a “range of housing options,” “diverse... transportation and recreation choices,” and access to “employment, education, health care, and other regional assets [such as] an abundance of art forms.”

Scenario Policy Direction: To strengthen existing communities, and to find opportunities to encourage new development and redevelopment in livable communities that are denser and designed for mixed uses.

Vision Theme: Natural Environment. The Regional Vision describes a future environment in which “open space [is] preserved and enhanced,” the region consumes “less energy and fewer natural

resources,” treats “water...as a critical natural resource,” preserves “the overall ecological health and diversity of the region,” and improves its residents’ health through “the availability of open space, transportation and recreation options, healthy food, clean water, and clean air.”

***Scenario Policy Direction:** To improve the region’s system of parks and open space, providing recreation options and protecting ecosystem function, and to conserve natural resources. This requires increasing the resources devoted to protection of an open space network, designing communities to meet environmental goals, taking a proactive approach to both supply and demand for energy and water, supporting green jobs and industry, and directly incorporating local food systems in the long-range plan.*

Vision Theme: Social Systems. The Regional Vision describes future social systems that “foster an educated, healthy, safe, and involved populace,” housing that is “safe, decent, affordable, and stable” and that follows fair housing practices, and “access to quality education, jobs, health care, cultural and social amenities, and transportation” for all residents.

***Scenario Policy Direction:** To pursue a balanced housing supply, with denser development that helps increase affordability while minimizing household transportation costs, and to support and encourage policies and programs to fill gaps that cannot be met by the private market. To improve the quality of education in the region, by eliminating gaps and increasing collaboration across early childhood, K-12, and higher education systems.*

Vision Theme: Economy. The Regional Vision describes a future economy with a “global status” that “ensures superior job opportunities” by “enhancing our...education systems and physical infrastructure... [as well as] workforce development programs and other training” and being a “center of innovation across all disciplines.”

***Scenario Policy Direction:** To support economic growth and innovation without overly involving the public sector in private sector decisions, by investing in infrastructure, education, and workforce training for jobs of all skill levels, by seeking ways to support new economic sectors such as green jobs, and by creating a supportive business environment, including addressing tax policy.*

Vision Theme: Transportation. The Regional Vision describes a future multi-modal transportation system that is “safe, accessible, easy to navigate, affordable, and coordinated with nearby land use,” reduces congestion and improves regional mobility, and supports “reinvestment in our existing communities...leading to environmentally sensitive and fiscally efficient outcomes.”

***Scenario Policy Direction:** To maintain existing infrastructure of all types and gain operational efficiencies from it, make additional investments in transit and freight, use innovative and sustainable finance and system management ideas, link transportation investments with housing and land use, and encourage choices that result in livable, walkable, transit-supportive communities.*

Vision Theme: Governance. The Regional Vision describes a region where “governance systems [are] characterized by high degrees of intergovernmental coordination” with links between physical planning and “social systems like health care, public safety, education, and social services.”

***Scenario Policy Direction:** To increase data sharing, governmental transparency, and intergovernmental collaboration, and to remove artificial barriers across programs at the local, regional, state, and federal levels.*

3. Policy directions and outcomes of the preferred Regional Scenario

This section describes the most important policy directions that are contained within the preferred Regional Scenario. The intent is to communicate priorities rather than to present an exhaustive list of all of the policies that the plan may support or encourage. It focuses only on policies that are the most important or that require the deepest analysis and discussion.

By pursuing and implementing the policies of the preferred Regional Scenario as described in this report, our region will reap significant and lasting quality-of-life benefits. We should expect a stronger economy with lower fiscal costs; a healthier environment; better-performing infrastructure systems; and a more equitable region. Throughout this section, a series of charts and qualitative descriptions contrast the expected regional characteristics of pursuing the preferred Regional Scenario with the results of continuing current trends. The region is expected to grow significantly by 2040, adding over two million people and one million jobs; depending on how we plan for the future, the effects of this growth can be either positive or negative for our region and communities.

Traditionally, comprehensive plans have chapters that separate transportation, housing, environment, and other topics. This report deliberately avoids that structure by linking inter-related issues that cannot be addressed effectively in “silos.” Instead, the policies and investments of the preferred Regional Scenario are divided between those that relate to physical infrastructure and those that relate to the overall policy environment. The section covering physical infrastructure is further broken down between infrastructure that is best addressed at the local level and infrastructure that is more regional in nature.

Within this framework, the plan’s main priorities can be summarized in three points:

- Support local actions that help to create livable communities.
- Prioritize regional infrastructure investments to achieve long-term goals.
- Foster a policy environment that supports sustainable prosperity for the region.

As explained in the introduction, this preferred Regional Scenario report does not contain detailed recommendations for action, which will instead be included in the draft *GO TO 2040* plan to be released in May 2010.

Local infrastructure

The many planning decisions made at the local level have, in sum, major regional impacts. This section describes the approach of *GO TO 2040* to community livability, affordability, and conservation of natural resources. The plan's overall intent in this area is to support the efforts of local governments to improve livability within their communities and to encourage a future pattern of more compact, mixed-use development that focuses growth where infrastructure already exists.

Local control

It is important for local control of land use to continue, and none of the plan's recommendations should be interpreted as conflicting with this local responsibility. The plan will support intergovernmental coordination and cooperation, while recognizing that land use decision-making authority rests with individual local governments.

Livable communities

The region's development pattern is extremely diverse, reflecting the unique characters of our many communities; growth between now and 2040 will be equally diverse. The plan will seek to accommodate our region's growth in livable communities that are well-designed, walkable, and offer access to the region's assets. These outcomes can often be achieved through moderately dense, mixed-use development, and the plan will recommend that local governments pursue opportunities for development of this type, while recognizing that the interpretation and application of these concepts will vary by community. In this report, the definition of "denser" development is expected to differ between communities, but it generally means densities that are somewhat higher than prevailing patterns of development in that area. The use of high-quality design principles to guide denser development is critically important to ensure it fits within communities, and the plan will highlight this as a key consideration. The definition of "mixed use" also varies between communities, and can refer to mixing land uses (such as residential, office, or retail) within a single structure or on the same block, or even simply providing connections between residential and commercial areas of a community.

Walkability

The design of our communities is critical for quality of life. The community-focused development pattern of the preferred Regional Scenario, and its investment in alternative transportation, is expected to *increase the number of people living in walkable communities*, defined as those with a Walk Score™ (www.walkscore.com) of 75 or over.

The plan will also recommend that much of the region's growth occur as "reinvestment," in areas within existing communities across the region that are already served by infrastructure, while recognizing that some development in currently undeveloped areas will also be necessary to support expected growth. As noted above, local governments will continue to have responsibility for land use decision-making, including the appropriate implementation of reinvestment projects in a way that respects local character and historic context, provides sufficient parks and open space, and addresses other local priorities.

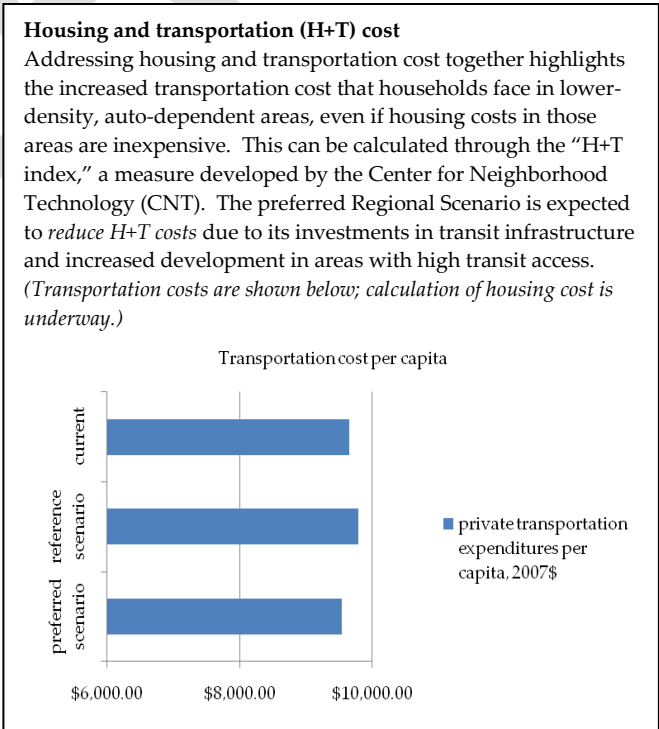

Increasing the livability of our communities is critically important to the plan’s goals. Long-range modeling of different future land use patterns showed that moderately dense development that focuses on reinvestment can have significant positive impacts in lowering the costs of infrastructure, reducing congestion and supporting alternative transportation modes, improving housing affordability, and minimizing environmental impacts. Denser, mixed-use development creates more accessible communities, allowing older residents to “age in place,” improving mobility for disabled residents, and leading to an overall healthier region. Supportive land use is also critically important to support the expansion of public transit, another of the plan’s key recommendations.

Effects on elderly and disabled residents
 Long-range planning must be sensitive to all members of all communities, including those with special needs or mobility restrictions such as elderly or disabled residents. The preferred Regional Scenario includes design features to improve the accessibility of our region’s communities, as well as investments in transit service and non-motorized transportation. These improvements, as well as a mix of land uses that brings residences and destinations closer together, make it easier for elderly or disabled residents to get around their communities. Therefore the preferred Regional Scenario is expected to *improve quality of life for elderly and disabled residents.*

The plan will focus on strategies to help local governments overcome challenges and pursue opportunities for redevelopment. One important element is the economic and financial feasibility of redevelopment projects. The public sector cannot create a market for redevelopment where none exists, but it can invest in infrastructure that makes redevelopment projects more viable. In particular, transit improvements are critical for supporting growth and can be a catalyst for redevelopment. The viability of development in these places can also be increased by, for example, remediating brownfields, reconsidering parking policies and requirements, reusing existing building stock where possible, and locating public buildings in areas where redevelopment is sought. Location of schools has been found to be especially important to livable communities and deserves particular attention in the plan.

Housing affordability

The GO TO 2040 plan treats housing as a critical part of the region’s infrastructure. The plan’s main direction is to pursue a balanced supply of housing distributed throughout the region, ensuring that each household has access to the region’s assets. A balanced housing supply that provides options positively affects many measures of quality of life, allowing people to live closer to work and improving choices for lower-income groups such as older residents and young households. It is especially important to provide opportunities for affordability in places with transit service as part of transit oriented development projects. As noted above, one benefit of a denser overall development pattern is increased affordability, particularly if the costs of transportation and housing are considered together. When households are able to spend less of their income on those items, a higher portion of their income can be spent in other areas, and the entire economy benefits.

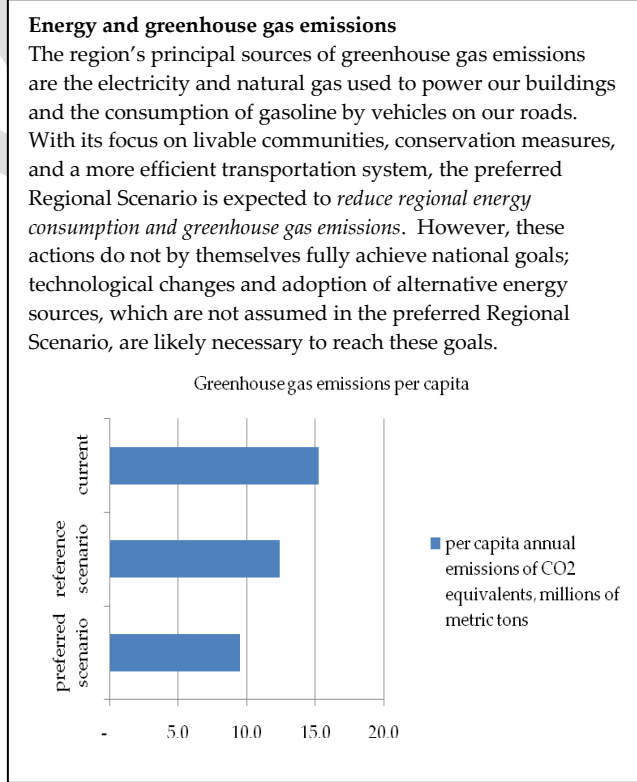

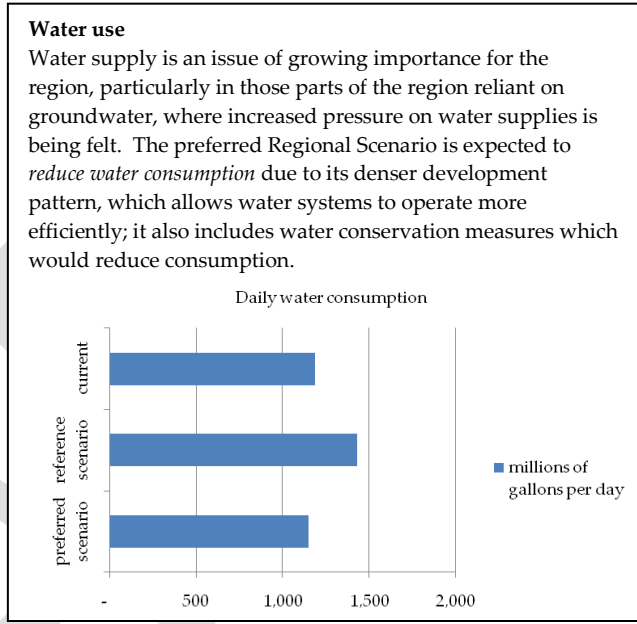

The majority of the region’s affordable housing is created by the private sector, and this is expected to continue. A key strategy for creating an adequate and regionally balanced supply of affordable housing is for local governments to support and permit its construction. Affordability and balance are broad concepts, and there will be varying ways that local governments define these terms to meet local needs. Similarly, there are a variety of housing policy options that work best when targeted to specific situations, rather than broadly applied. For example, housing preservation, inclusionary zoning, or removal of regulatory barriers are solutions that may be appropriate in different parts of the region. In addition to supporting affordable housing provided through the private market, the plan will support appropriate roles for other supplemental public programs.

Resource conservation

The plan will call for increased efforts to conserve resources, including water and energy; these can be effectively applied at the local level or by individual households and businesses. This will include a focus on green design for new developments and buildings, energy codes to guide new development, retrofits or renovations of existing buildings, and support for the growth of green jobs. Many of these improvements, in addition to imparting environmental benefits, also reduce energy costs for households and businesses, increasing affordability.

The plan will also treat our farmland and food supply as an important natural resource, emphasizing local food production and access to fresh food as a means to reduce energy consumption, improve health and the natural environment, support the agricultural economy, and increase a sense of community. Local food systems can be strengthened by local actions as well as broader regional or state policy, and the plan will identify actions at a variety of levels that support local food systems.

Resource conservation will help to reduce the region’s greenhouse gas emissions, but it is only part of the solution. Cleaner energy sources are needed to power our buildings, and cleaner fuels and more efficient vehicles must be part of the solution to reduce emissions from the transportation sector. While these issues are addressed at a larger scale than the region, the plan will support efforts to develop cleaner energy sources or use technological advancements to reduce our greenhouse gas emissions.

Regional infrastructure

Local land use decisions and regional infrastructure investments are interrelated and should be mutually supportive. Our region relies on a strong infrastructure system for its future prosperity and livability. Regional infrastructure is defined here to include both “gray” infrastructure, primarily including transportation, energy, telecommunications, water, stormwater, and wastewater systems, as well as “green” infrastructure, referring to networks of open space including waterways. The plan’s overall approach in this area is to prioritize infrastructure investments to gain the most long-term benefit.

Maximizing use of existing infrastructure

Priority will be given to the preservation and maintenance of existing infrastructure at a level that is safe and adequate. In the transportation area, this involves continued routine maintenance activities, but also maximizing the use of infrastructure and preserving its capacity through technological and operational solutions. For other areas such as water, stormwater, and sewer systems, this means replacing our aging pipes and other infrastructure, which requires significant investment; in the case of green infrastructure, it means maintaining and managing our existing high-quality open space.

This focus on preservation and maintenance is expected to have positive economic impacts. Research has found that reinvestment in existing infrastructure generally has greater economic benefit than new construction. Also, a more compact, mixed-use development pattern – discussed in the previous section of this report – can reduce the need for additional physical infrastructure, lowering future construction and maintenance costs. Ensuring that infrastructure is sufficient to support this redevelopment should be a priority.

Prioritizing investments

In the current economic climate, it is critically important for the region to prioritize investments based on long-term impacts, ensuring that we are making the best use of scarce funding. Major transportation capital projects, such as new roadways or rail lines, will be evaluated and prioritized in a later step of plan development. For other non-transportation infrastructure, prioritization of investment will be a recommendation of *GO TO 2040*, and

Infrastructure cost

The region has an enormous supply of physical infrastructure, and maintaining it is costly. The preferred Regional Scenario is expected to *reduce the cost of new infrastructure needed to support growth* by reinvesting in our existing communities, allowing resources to be focused on improving our existing infrastructure and making strategic improvements. In this chart, miles of new local roads are used as an indicator of the overall need for new local infrastructure.

Congestion

The region’s traffic congestion is among the worst in the nation, with negative impacts on the economy, environment, and quality of life. The transportation investments and more efficient land use pattern in the preferred Regional Scenario are expected to *reduce congestion* compared to a reference scenario that projects current trends, although congestion will still rise in absolute terms compared to today. While the number of congested hours in the region will increase by 2040, it will rise at a lower rate than population growth, meaning that congested hours per capita will decline.

the plan will call for the relevant decision-making groups to use evaluation criteria that include long-term economic impacts when making infrastructure investment decisions. Regional infrastructure should also be designed to enhance environmental features and be sensitive to local context.

As noted above, maintenance and preservation of existing infrastructure is a priority, but the region also needs to improve and enhance our infrastructure. In the transportation area, this is particularly important in the areas of public transit and freight, and these topics are covered in more detail later in this section. Beyond these, strategic highway improvements should be targeted to achieve particular economic goals or to reduce congestion hotspots. Also, bicycle and pedestrian travel is important, and a multimodal “Complete Streets” approach to transportation planning will be supported by the plan.

Water, stormwater, sewer, and other public infrastructure systems face similar issues. New growth will require the expansion of these systems, but they should be evaluated and prioritized to best meet the region’s goals. Energy and telecommunications systems are also critical, and the public and private sectors will be encouraged to work together to consider long-term economic impacts when making investment decisions and to ensure that regulations governing energy and telecommunications infrastructure do not limit the ability of private industry to adapt and innovate.

Green infrastructure

The plan will also address strengthening the region’s green infrastructure, made up of an interconnected network of land and water, ranging from large open space areas to small-scale green stormwater management practices. Such a network will benefit our natural environment, improve biodiversity, and support ecosystem function. Green infrastructure also improves the health of our residents, and the region’s overall economy, and public support for additional regional and local open space has been shown to be strong.

Prioritization is no less important for this type of infrastructure, and the plan will recommend that acquisition and restoration activities be targeted in the most sensitive or valuable environmental lands to preserve biodiversity, increase the supply of parks and open space in parts of the region that have shortages of these features, and provide important connections between open space areas. This approach also highlights the value of open space for stormwater management and considers waterways to be part of the green infrastructure system.

Land preservation

The conversion of farmland and open space to developed uses will occur to some extent as our region grows, but reducing the rate of consumption is important. The preferred Regional Scenario encourages reinvestment in existing communities, county and local efforts to preserve agriculture, support for local food systems, preservation of sensitive environmental land, and incorporation of natural lands and agricultural activities into some new developments; therefore, it is expected to *reduce the rate of consumption of farmland and open space*.

Water quality

The quality of the region’s lakes, rivers, streams, and other water bodies is important for health and biodiversity. A good proxy for possible impacts to water quality is the amount of impervious surface, areas like driveways, streets, and roofs which produce runoff. The preferred Regional Scenario is expected to *improve water quality* through reinvestments in existing communities, preservation of open space, and the use of green, low-impact design techniques for development and redevelopment.

Transportation system finance and expansion

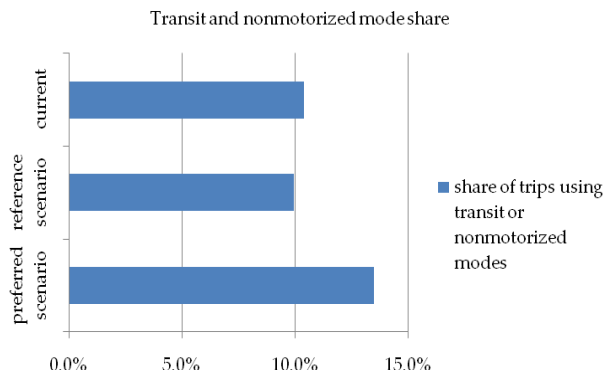

Any recommendations for improvement or expansion of the transportation system will require reconsideration of existing resource distribution or additional funding beyond what is now available. Due to the scale of our needs and the difficulty of increasing taxes, we will need innovative ways of financing transportation improvements beyond the federal and state gas tax and other conventional sources, although these sources will remain important. Options being explored include Vehicle Miles Traveled (VMT) fees to replace or supplement the gas tax, “value capture” strategies as part of new transit service extensions, public-private partnerships for new facilities, user fees such as congestion pricing, and others.

Transit improvements have broad support across the entire region, and improving transit regionwide is a high priority of *GO TO 2040*. Improvements to transit service have been shown to reduce greenhouse gas emissions, improve the regional economy, provide important connections between jobs and housing, and support reinvestment in existing communities; these benefits are recognized by residents, as evidenced by the high level of support for public transit expressed during CMAP’s public engagement. The plan will support new transit service or expansion of service into areas that are currently underserved, provided that it is complemented by land use planning and infrastructure investment that supports transit. There is an extremely strong link between the success of transit service and the character of nearby development, so the importance of supportive land use planning cannot be overemphasized. Also, inter-regional high speed rail will be an important element of the plan’s approach to transit, requiring extensive coordination outside of the region.

The region’s freight system is a critical component of the regional – and national – economy, and the plan will recommend freight improvements to preserve this important asset. These include rail-focused freight investments (including and going beyond the CREATE program) and a similar system of truck-focused infrastructure improvements. Beyond physical infrastructure, having a skilled labor force able to access jobs within the freight industry is also important, and the plan will also recommend improving the links between education and training opportunities and the needs of the freight industry.

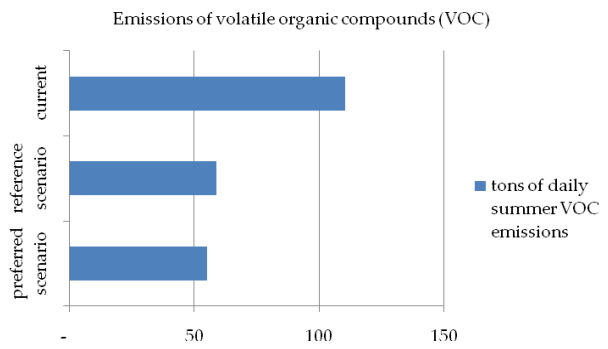

Transit and nonmotorized transportation

Providing transportation options will increase the use of public transportation, walking, and biking. Allowing more use of these transportation modes can reduce congestion, improve the natural environment, and create more livable communities. The preferred Regional Scenario is expected to *increase the use of alternative transportation modes* through investment in transportation improvements and through denser, mixed-use development patterns.

Air quality

The region’s air quality has been continually improving for several decades, due primarily to technological improvements and stricter federal regulations. The preferred Regional Scenario is expected to *improve air quality* through increased use of transit and non-motorized transportation modes. The chart below shows daily emissions of volatile organic compounds, an ozone precursor; other pollutants show similar trends.

Policy environment

GO TO 2040 will address broad issues of governance and policy, which are equally important as physical infrastructure is to our region's future. Many of these issues are beyond the traditional focus of regional planning agencies, but some, including human capital, innovation, tax policy, and the equitable distribution of economic benefits, are too important to the region's future prosperity for a comprehensive plan to ignore. To help the region to attract and retain businesses and jobs, the plan needs to support activities that make the region attractive to the private sector and contribute to a skilled workforce. The plan's overall approach in this area is to support activities that create a favorable policy environment for sustainable prosperity, contribute to regional job growth, and contribute to the region's status as a global economic center.

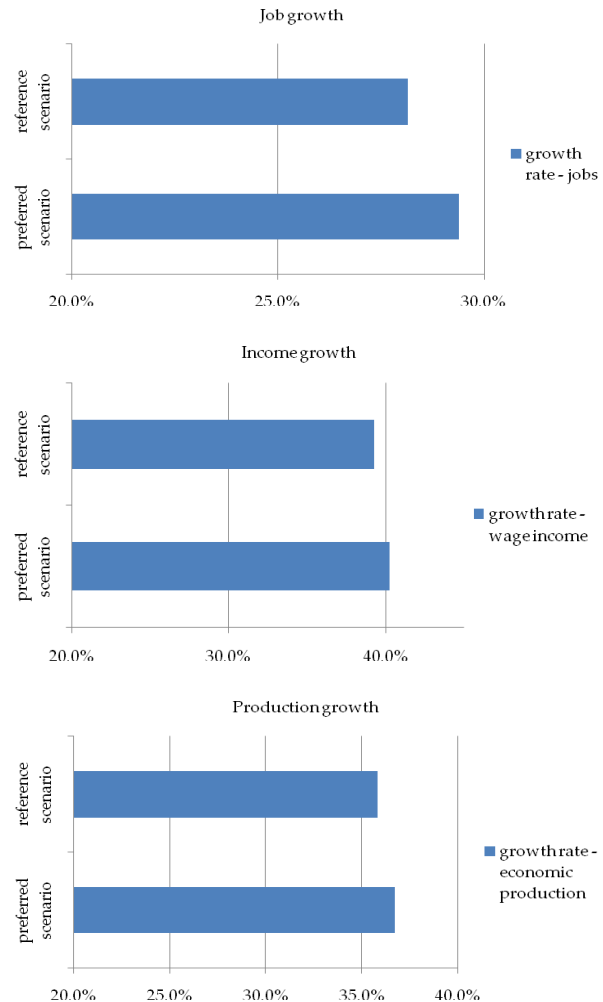

An important role for CMAP is to address these broader policy issues by providing data and tracking key indicators. These indicators will be used to measure how well the plan is meeting its goals, and to establish accountability for its implementation. An initial report on the status of key indicators will be released as part of the completed GO TO 2040 plan in October 2010.

Workforce and human capital

The quality of our labor force will be one of the most important factors influencing future prosperity. The economic importance of a skilled, educated workforce is recognized by our region's leaders and the general public, and is reinforced by research that shows education levels to be the strongest predictor of future economic growth for regions. Improving the labor force will require increases in the quality of education systems in the region, particularly by identifying and eliminating gaps between early childhood, K-12, and higher education systems; another recommendation will be to increase collaboration between these education levels through a comprehensive P-20 (preschool through advanced education) approach. Similarly, gaps between education systems, employer needs, and workforce development

Economic competitiveness

Economic prosperity is caused by many factors, including high-quality infrastructure, a skilled labor force, a supportive business environment that fosters innovation, and a good regional quality of life, among others. The preferred Regional Scenario is expected to *improve regional prosperity* by addressing these contributors to economic growth. The charts below show the increased jobs, wages, and economic production created by the infrastructure investments in the preferred Regional Scenario.

Human and community development outcomes

Many positive impacts of the preferred Regional Scenario are in areas beyond physical planning. Investing in human capital, in infrastructure for walking and biking, and in low-income communities is expected to have *positive impacts on human and community development outcomes* in areas such as education, health, safety, hunger, food systems, workforce development, arts and culture, emergency preparedness, and human relations. More detailed evaluation of these outcomes is online at www.goto2040.org/human_community_development.

programs need to be addressed, with particular attention to increasing the role of community colleges as a critical link in this relationship. These efforts should include workforce training programs for jobs that do not require advanced education and should support development of skills that are relevant to green businesses. Also, the region will need to continually attract and retain skilled and educated workers and will support arts and culture and other amenities that are shown to be effective at this.

Innovation

To support our future prosperity, the plan will seek to facilitate a business environment that encourages innovation. The plan’s approach is based on the concept that the public sector does not by itself create innovation, but that it can support it. In particular, appropriate directions for the plan are to coordinate with public and private sectors and educational institutions to support innovation, and to collect and disseminate data on innovation trends. The plan will call for a particular focus on “green jobs,” including manufacturing components for alternative energy generation or similar industries and construction employment involving energy or water conservation.

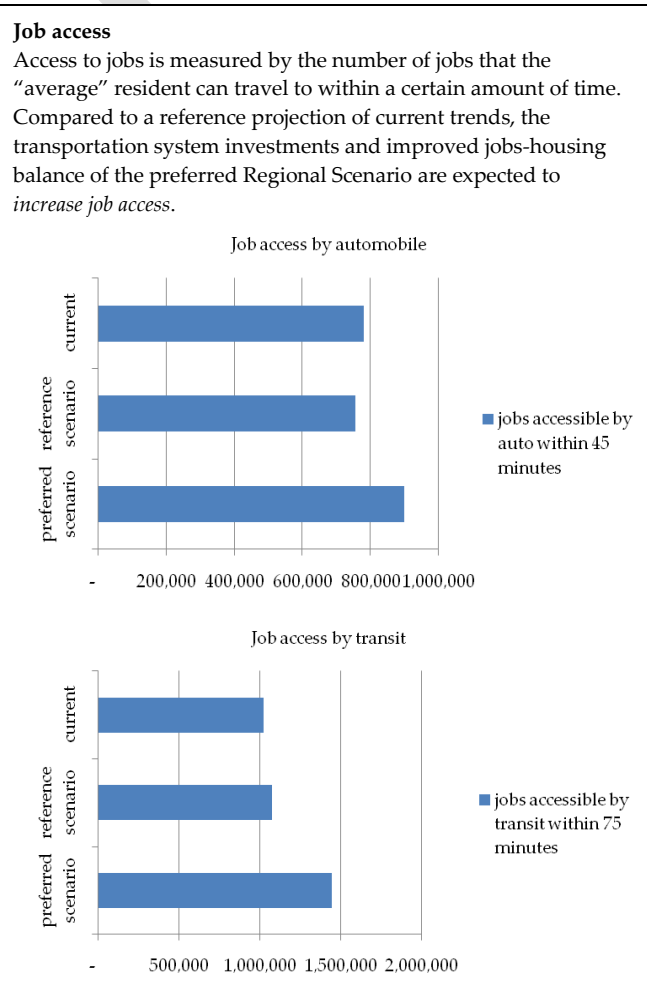

Tax policy

The plan must recognize the importance of tax policy to economic growth and development decisions within the region. The current tax system causes the region’s local governments to rely on sales and property tax as their primary revenue sources, with far-reaching land use, development, and economic impacts. Critical issues to address in the plan include the impact of state revenue distribution arrangements, property tax classifications, and rate increase limitations; sustainability of the state motor fuel tax; local tax capacity; and other sales, property, or income tax issues that affect development decisions, local government finance, transportation system funding, or funding of other GO TO 2040 priorities.

Distribution of growth

The plan must address the distribution of economic growth, specifically ensuring that the economic benefits of GO TO 2040 are distributed fairly throughout the region and have a positive impact on our lowest-income population groups. A goal of the plan is reduction of poverty, which improves health and education outcomes while reducing crime, hunger, and other negative outcomes. In turn, improving the economic situation of lower-income people creates additional economic growth, as their workforce participation is increased. The plan also seeks to maintain jobs in the region that pay a good wage but do not require advanced education.

A critical part of this approach is to encourage economic growth through reinvestment in disadvantaged communities, particularly those with existing concentrations of affordable housing, but the public sector cannot by itself successfully

create this growth. Instead, the plan will recommend long-term solutions such as investments in infrastructure and in the labor force, as well as providing access between these areas and job centers. The plan should ensure that the benefits and burdens of the region's economic growth are shared fairly among its communities.

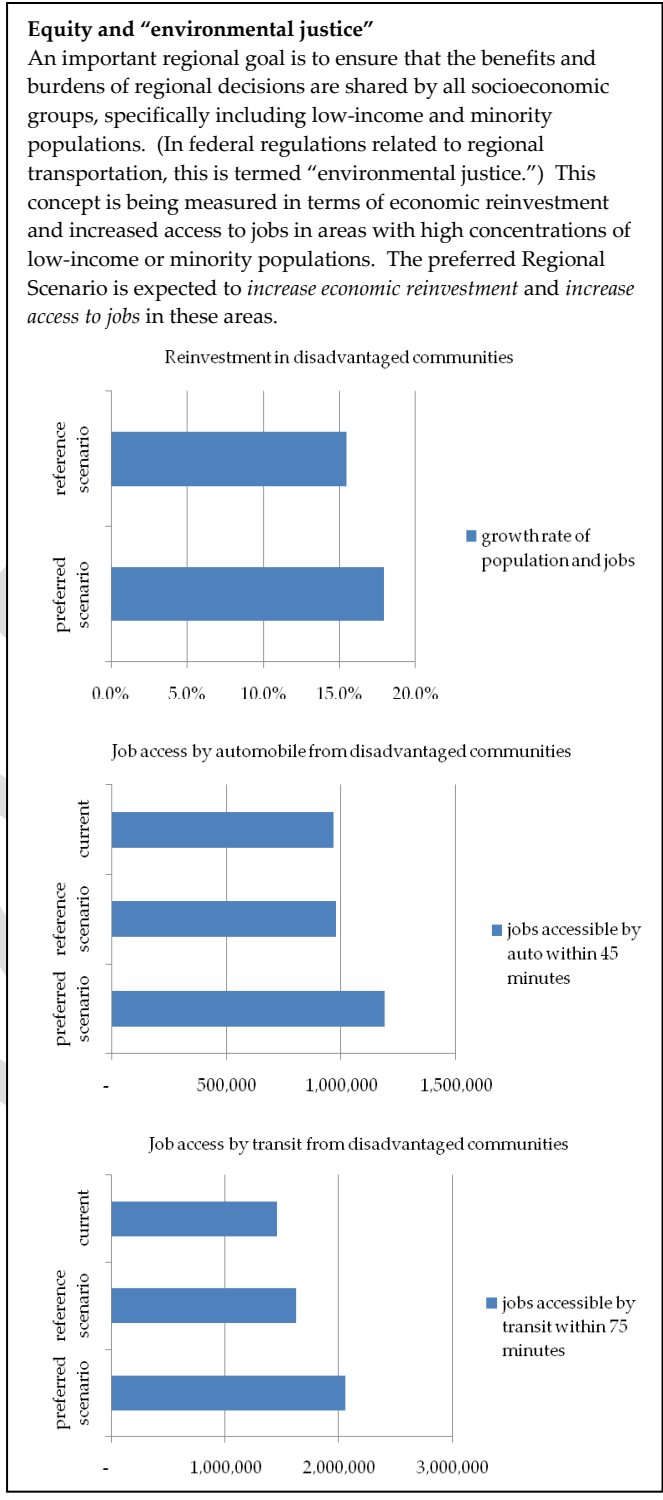

Data sharing and transparency

Across the region, an enormous number of federal, state, regional, and local agencies currently collect administrative data for their own use. The plan will call for real-time sharing of this data by public agencies with each other, as well as other organizations and residents, which will improve efficiency for a variety of public services. Such increased transparency of data and improved intergovernmental data sharing is vitally important for emergency preparedness, and it will be an important factor in the success of the Regional Indicators project.

Coordinated investment

GO TO 2040 should serve as a sustainable "roadmap" for the region's future and help guide investment decisions at the federal, state, and local levels. This requires an examination of how to improve the ways in which investment decisions are currently made. Many of our most pressing problems – in the areas of transportation, housing, climate change, economic vitality, and environmental quality – cannot be solved solely by the individual actions of any level of government. These issues truly "spill over" across jurisdictional borders, and their solutions demand coordinated investment by all levels of government.

For regional planning and community-level implementation to be aligned effectively, the "silos" that separate federal and state funding and regulatory programs need to be removed, giving metropolitan regions the flexibility in identifying the best ways to achieve identified outcomes, rather than merely meet the program-based requirements of specific grants. While pilot programs will be necessary early on, funding sources need to be sustainable and significant over the longer term, and administrative and regulatory barriers need to be addressed.

Increasing intergovernmental coordination to achieve coordinated investment will be among the plan's key recommendations. In a number of areas at the federal and state levels, public programs would deliver better services by coordinating efforts across agencies. One example is increased coordination among state and federal agencies charged with early childhood education, health, and hunger. Another example is the formation of stronger partnerships among transportation, housing, and environmental agencies to foster greater investment in livable and sustainable communities. At the local level, our multitude of municipalities and other local governments should be communicating and cooperating regarding goals and priorities but also basic service delivery, which in some cases may prove duplicative. Efficiencies can be gained through increased levels of local coordination, communication, and -- where appropriate -- shared or consolidated services.

For comprehensive plans like *GO TO 2040* to truly help direct investment decisions, federal and state support for plan implementation is vitally important. For the plan's policies and priorities to become a reality, federal and state investments need to be targeted to local governments and regions not only for comprehensive planning, but for comprehensive implementation.

4. How the preferred Regional Scenario was developed

Several years of research, analysis, and public engagement were used to develop the preferred scenario described in this report. Through a series of regional snapshot reports and strategy research papers written during 2008 and 2009, CMAP developed a base of understanding of the many important issues and potential policy responses that confront the region. These research papers are available at www.goto2040.org/strategy_papers.aspx and www.cmap.illinois.gov/snapshot.aspx.

Based on this research and feedback from experts around the region, three alternative future scenarios, each featuring a distinct combination of policy and investment choices, were developed. These were compared to a “reference scenario” which continued current trends, and the pros and cons of each were analyzed. Descriptions and analysis of the three scenarios were released for public comment during summer 2009, and are available online at www.goto2040.org/scenarios.

A wide variety of public engagement activities took place during summer 2009. Participants could choose their depth of participation, ranging from taking a two-question survey to exploring CMAP’s scenario evaluation results in detail. Opportunities were available for face-to-face contact at over fifty workshops, online participation that did not require direct interaction, or visits to CMAP booths or kiosks located around the region. The primary public engagement tool used during the summer was an interactive software tool, called MetroQuest, which let users experiment with different types of transportation investments and development patterns and view the outcomes of these decisions. More detail on the public engagement process is available online at <http://www.cmap.illinois.gov/WorkArea/downloadasset.aspx?id=18112>.
