- Previously analyzed amendments:
 - I-355 add-lanes (I-88 to 75th Street), TIP ID 08-08-0012.
 - Prairie Parkway (IL 71 to US 34, in the 2020 analysis network), TIP ID 09-02-9033.
 - I-355 South Extension add-lanes (127th Street to I-80) and associated improvements TIP IDs 12-94-0016 and 12-07-0004.

The 2010, 2020 and 2030 highway networks were coded to include the changes listed above and the regional travel demand models were re-run using the new networks. The resultant VMT by speed and facility type for eight vehicle classes (including urban bus) was expanded to twenty-eight MOBILE vehicle types for multiplication by regional emission rates developed using the MOBILE model. The highway emission estimates are the sum of those calculations for each precursor or direct pollutant in each scenario year. Reductions from the National Energy Policy Act Credit and Clean Fuel Fleet Program have not been claimed.

For ozone, analysis horizon years 2010, 2020 and 2030 were evaluated using the current CMAP conformity model and the approved regional MOBILE6.2.03 emission rates. The results fell below SIP emission budgets for the attainment year and were very similar to emission estimates from the conformity analysis documentation for the 2030 RTP Update and FY 07-12 TIP approved in October, 2006.

PM_{2.5} emissions were calculated based on the project changes listed previously. PM_{2.5} and NO_x emissions remain below the baseline year numbers.
