# The Test of Fire: A Comparison of Adapted Four-Step MPO Model Results and Planning Process Findings to Actual Experience

*Chicago Area Model Users Group (CATMUG)*  
*November 4, 2015*

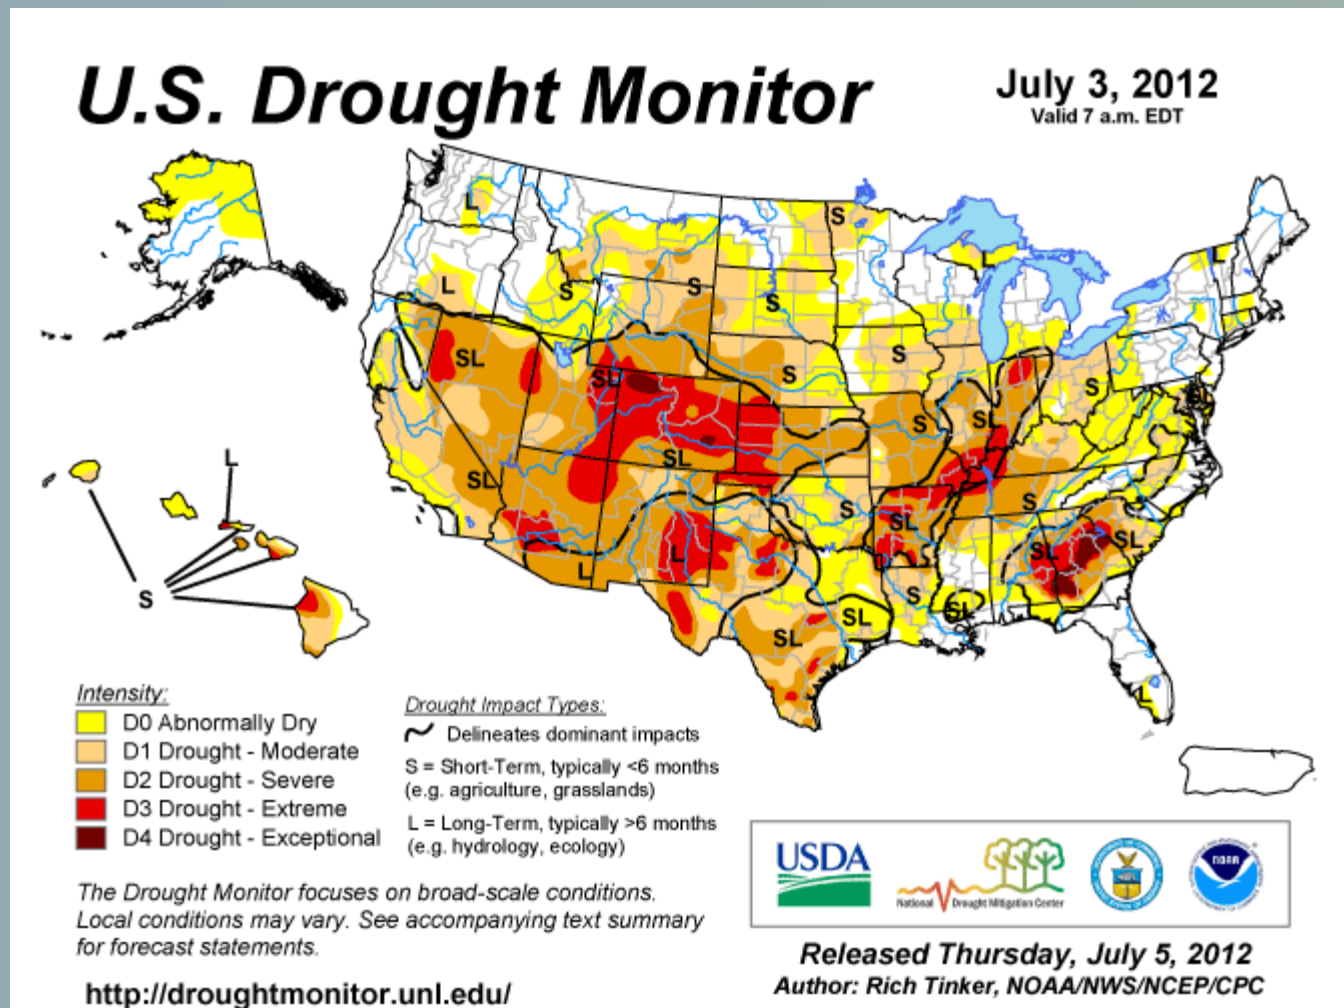

*Presented by:*  
*Maureen Paz de Araujo, AICP CTP*  
*Mary Lupa, AICP*  
*Craig T. Casper, AICP*  
*Bret Waters*

## A Changing Trend in Wildfire Incidence

- Extreme drought conditions increase fuel availability
- Urban areas that are located at edge of wildland are placed at risk

## 2012 Waldo Canyon Fire – Threat to Wildland Urban Interface Realized

## Response Elements

- ✓ Wildfire Mitigation Plan (WMP) – 2001
- ✓ WUI Wildfire Evacuation Appendix – (2008, Updated 2011)
- ✓ Community Wildfire Protection Plan (CWPP) – 2011

## Key Partners

- ✓ Colorado Springs Office of Emergency Management (OEM)
  - Wildland Urban Interface Wildfire Mitigation Plan / WUI Wildfire Evacuation Appendix
  - Community Wildfire Protection Plan
- ✓ Colorado Springs Fire Department
  - Neighborhood-level Emergency Notification/Evacuation Plans
- ✓ Pikes Peak Area Council of Governments
  - Evacuation Modeling/Planning Process
  - Wildfire Evacuation Traffic Control Plans

## Options Considered

- ✓ Design and Implement Evacuation Signal Control
  - Colorado Springs Traffic Operations Center (TOC) Lead
  - Utilizing Colorado Springs TOC ITS/Signal Control Software
- ✓ Develop Modeling Supported Evacuation Traffic Control Plans
  - Use Micro-simulation (VISSIM) for evacuation /traffic control simulation
  - Use Travel Demand Model for evacuation /traffic control simulation

## Selected Modeling & Planning Approach

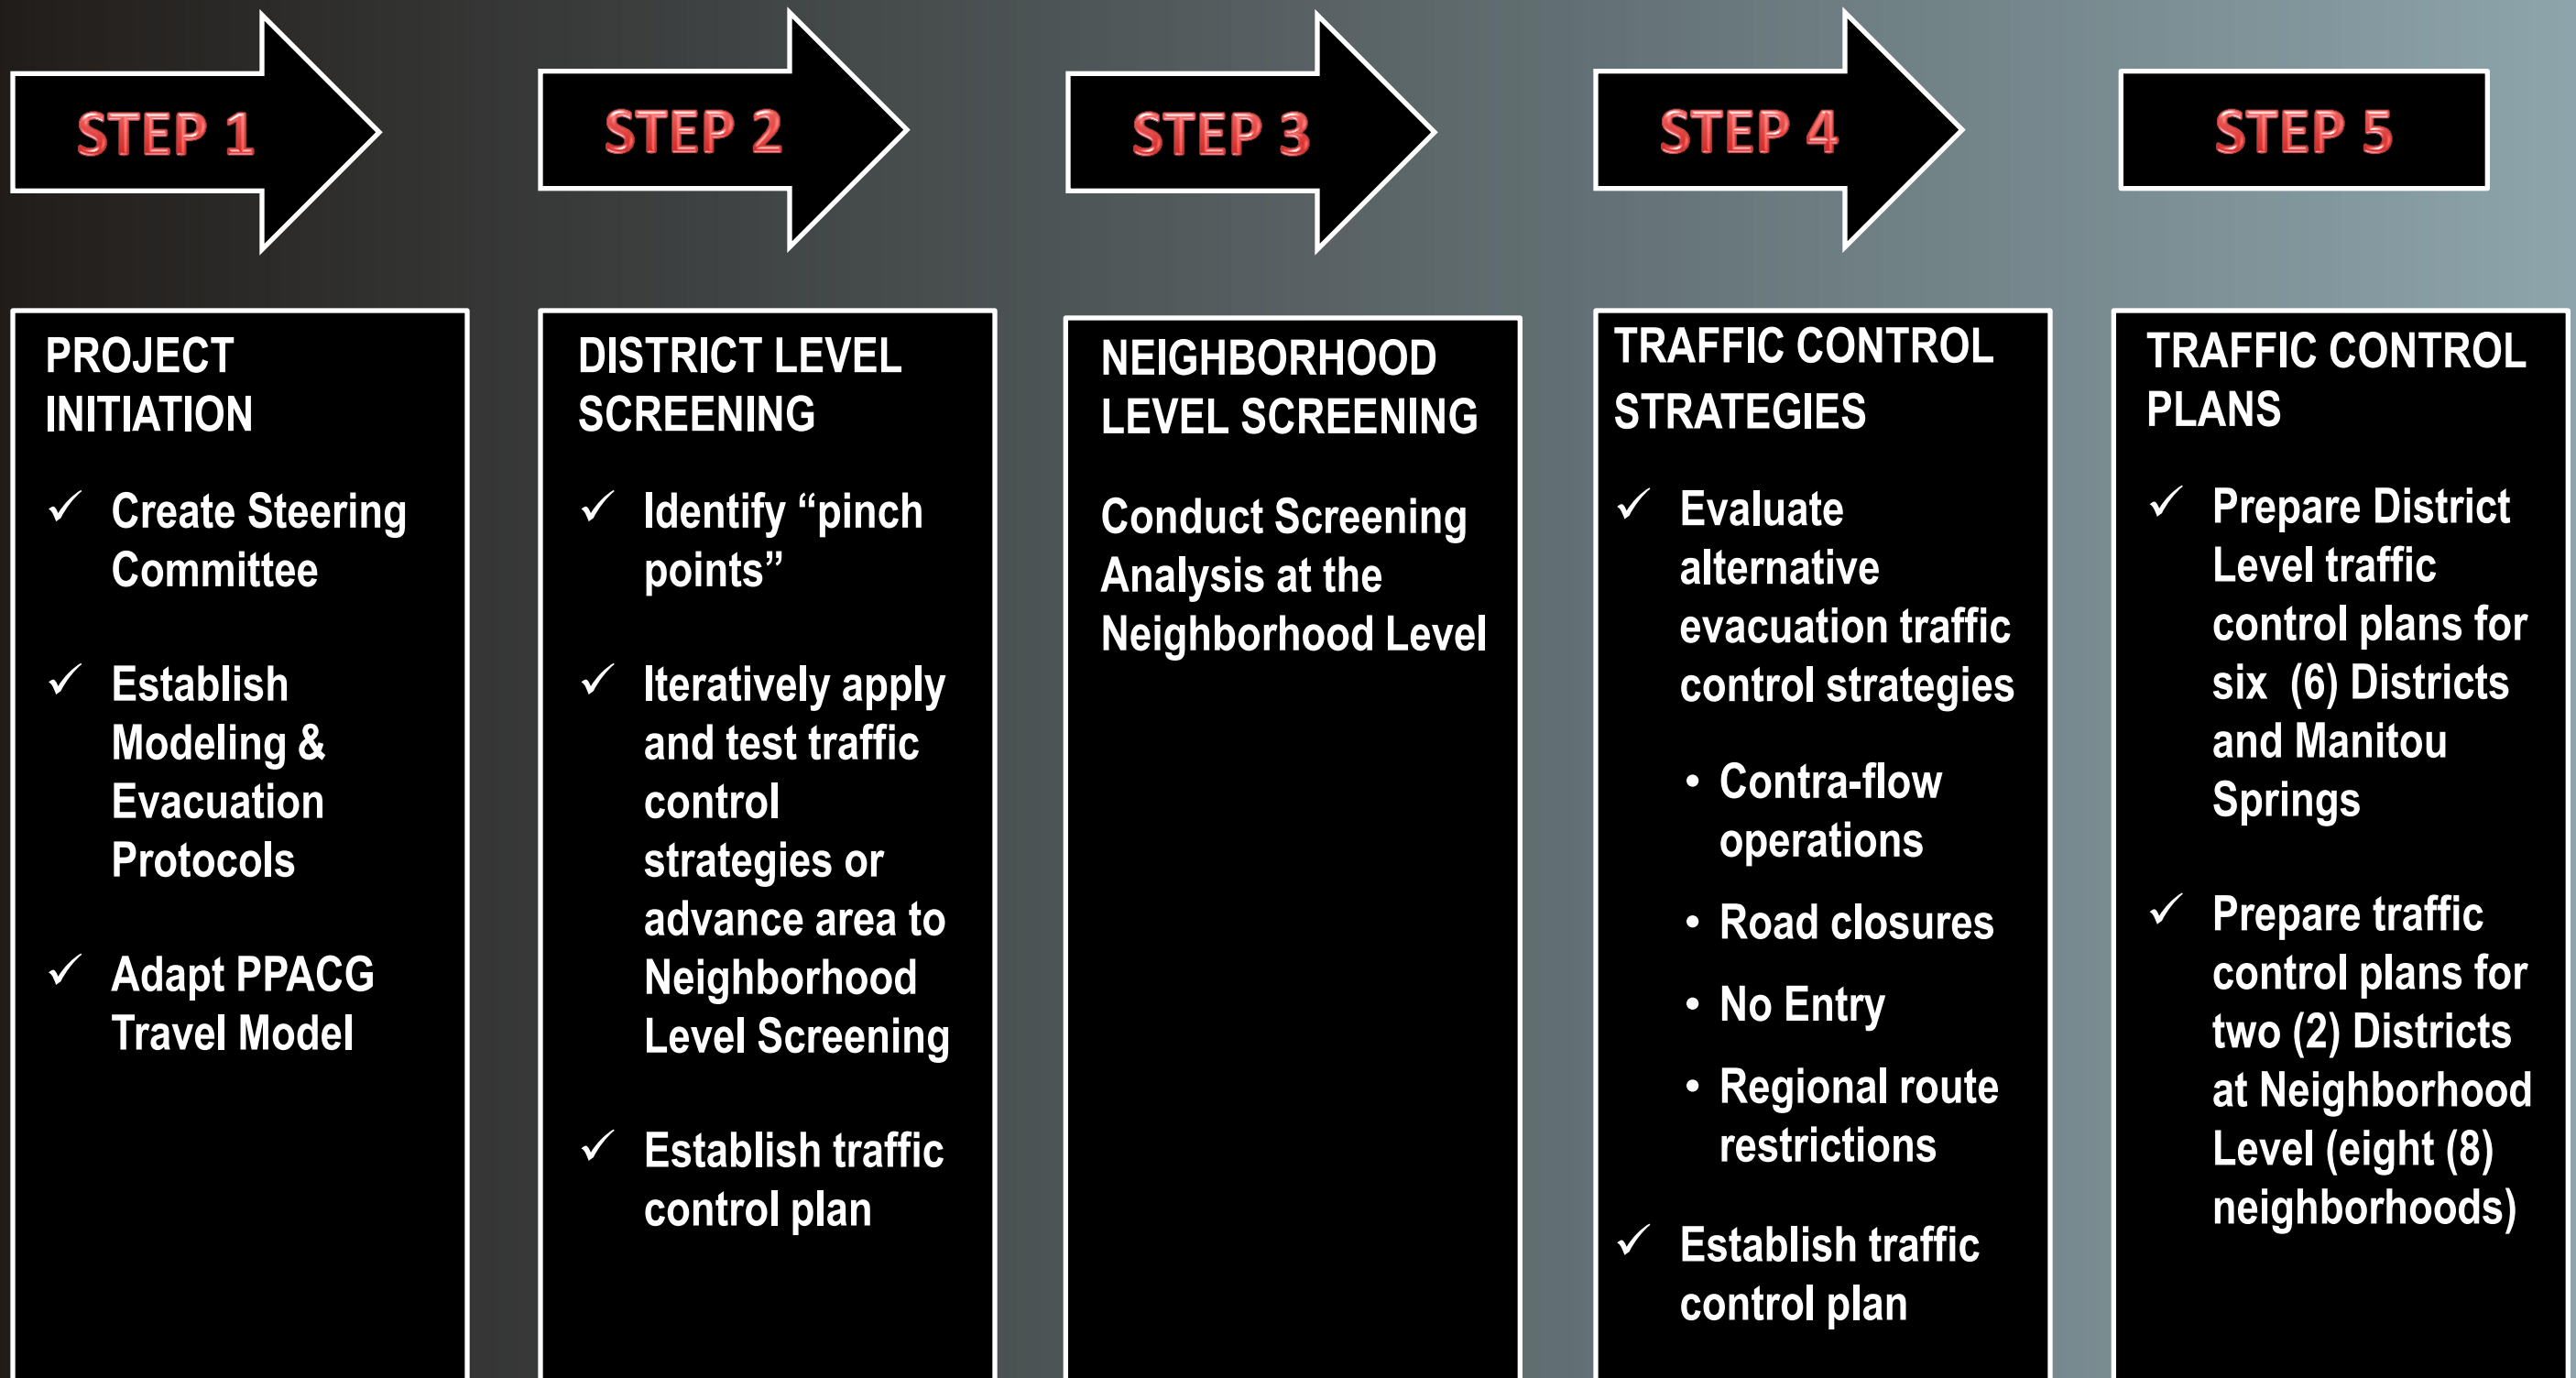

- ✓ Adapt PPACG 4-Step Travel Demand Model for evacuation simulation
- ✓ Use available data to support model adaptation and application
- ✓ Leverage Technical Steering Committee Expertise
  - To establish evacuation protocols to be modeled
  - To validate model performance – Are the model results reasonable?
- ✓ Use an iterative screening approach to optimize Traffic Control Plans
- ✓ Produce Traffic Control Plan maps to meet user requirements
  - OEM strategists
  - Emergency dispatchers
  - Law enforcement traffic control personnel
  - Emergency responders

CATEGORY	PROTOCOLS, CHARACTERISTICS OR ATTRIBUTES
DEFINE SCENARIOS	<ul style="list-style-type: none"><li>• Identify potential fire spread/risk subareas</li><li>• Evaluate no-notice versus notice evacuation</li><li>• Establish background traffic conditions</li></ul>
TRAFFIC CONTROL	<ul style="list-style-type: none"><li>• Intersection-level control</li><li>• Signal preemption/emergency operation</li><li>• Route closures</li><li>• Traveler information systems</li><li>• Contra-flow operations</li></ul>
EVACUATION PROTOCOLS	<ul style="list-style-type: none"><li>• Required evacuation rate: notice, no-notice, staged evacuation</li><li>• Shelters: locations, capacities</li><li>• Notification means</li></ul>
EVACUEE BEHAVIOR	<ul style="list-style-type: none"><li>• Mobilization time, activity sequence,</li><li>• Vehicle occupancy rate</li></ul>
SPECIAL FACILITIES	Evacuation procedures/responsibilities for schools, jails, nursing homes, hospitals and special facilities

CATEGORY	PROTOCOLS, CHARACTERISTICS OR ATTRIBUTES
DEMOGRAPHIC DATA	<ul style="list-style-type: none"><li>• Automobile ownership by TAZ</li><li>• Number of households by TAZ</li><li>• Number of persons and age distribution by TAZ</li><li>• Disabled representation within households by TAZ</li><li>• Assisted evacuation group quarters population by TAZ</li><li>• Shelter capacity and locations by TAZ</li></ul>
BACKGROUND TRAFFIC	Background traffic for preload
EVACUEE DESTINATIONS	Evacuee destinations/splits by TAZ/external station
ROAD NETWORK	<ul style="list-style-type: none"><li>• Roadway network layout (links/nodes)</li><li>• Intersection control (type/ approach classification hierarchy)</li><li>• Number of lanes/link capacity</li><li>• Free-flow link speeds</li></ul>

# Evacuation Model Application and Planning Process

8

## Establish Technical Steering Committee

- Consultant Project Team
- PPACG Modeling Staff
- Colorado Springs Office of Emergency Management
- Colorado Springs Engineering – TOC
- Colorado Springs Police Department
- Colorado Springs Fire Department

## Establish Modeling/Evacuation Protocols

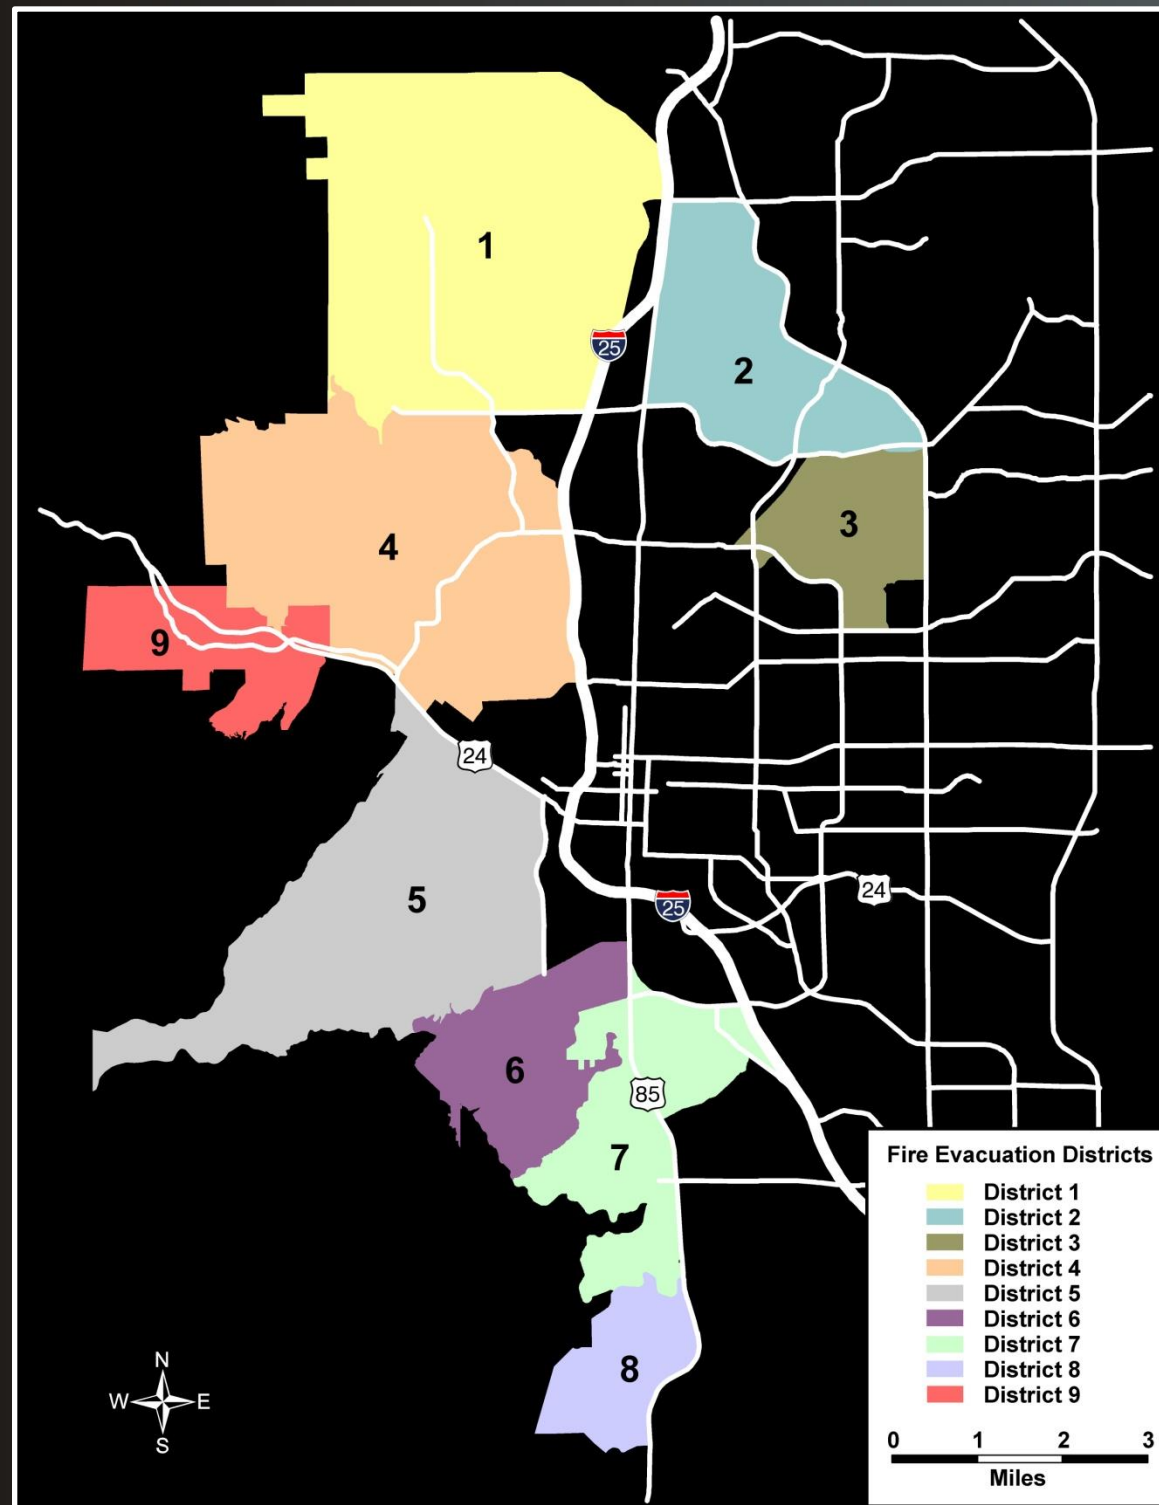

- Population/vehicles to be evacuated
- Restrictions/shared responsibilities
- Evacuee destinations – “shelter-in-place,” official shelters, other
- Contra-flow/no contra-flow
- Required “time-to-evacuate”
- Resident re-entry restrictions

## Adapting the PPACG Travel Model for Evacuation Planning

- ✓ Use 2010 PM peak hour model to represent background traffic
- ✓ Use hourly volume to capacity (V/C) ratios to evaluate “time-to-evacuate”
- ✓ Develop Embedded Evacuation Model(s)
  - Vehicles to be evacuated from U.S Census auto ownership data
  - Assume full evacuation of all households
  - Assume each household evacuates two (2) vehicles
  - Assume the following distribution of evacuee destinations:
    - Official Shelters (15%)
    - Other households in the area (60%)
    - Motels (15%)
    - Out of the County entirely (10%)

# Step 2: District Level Screening

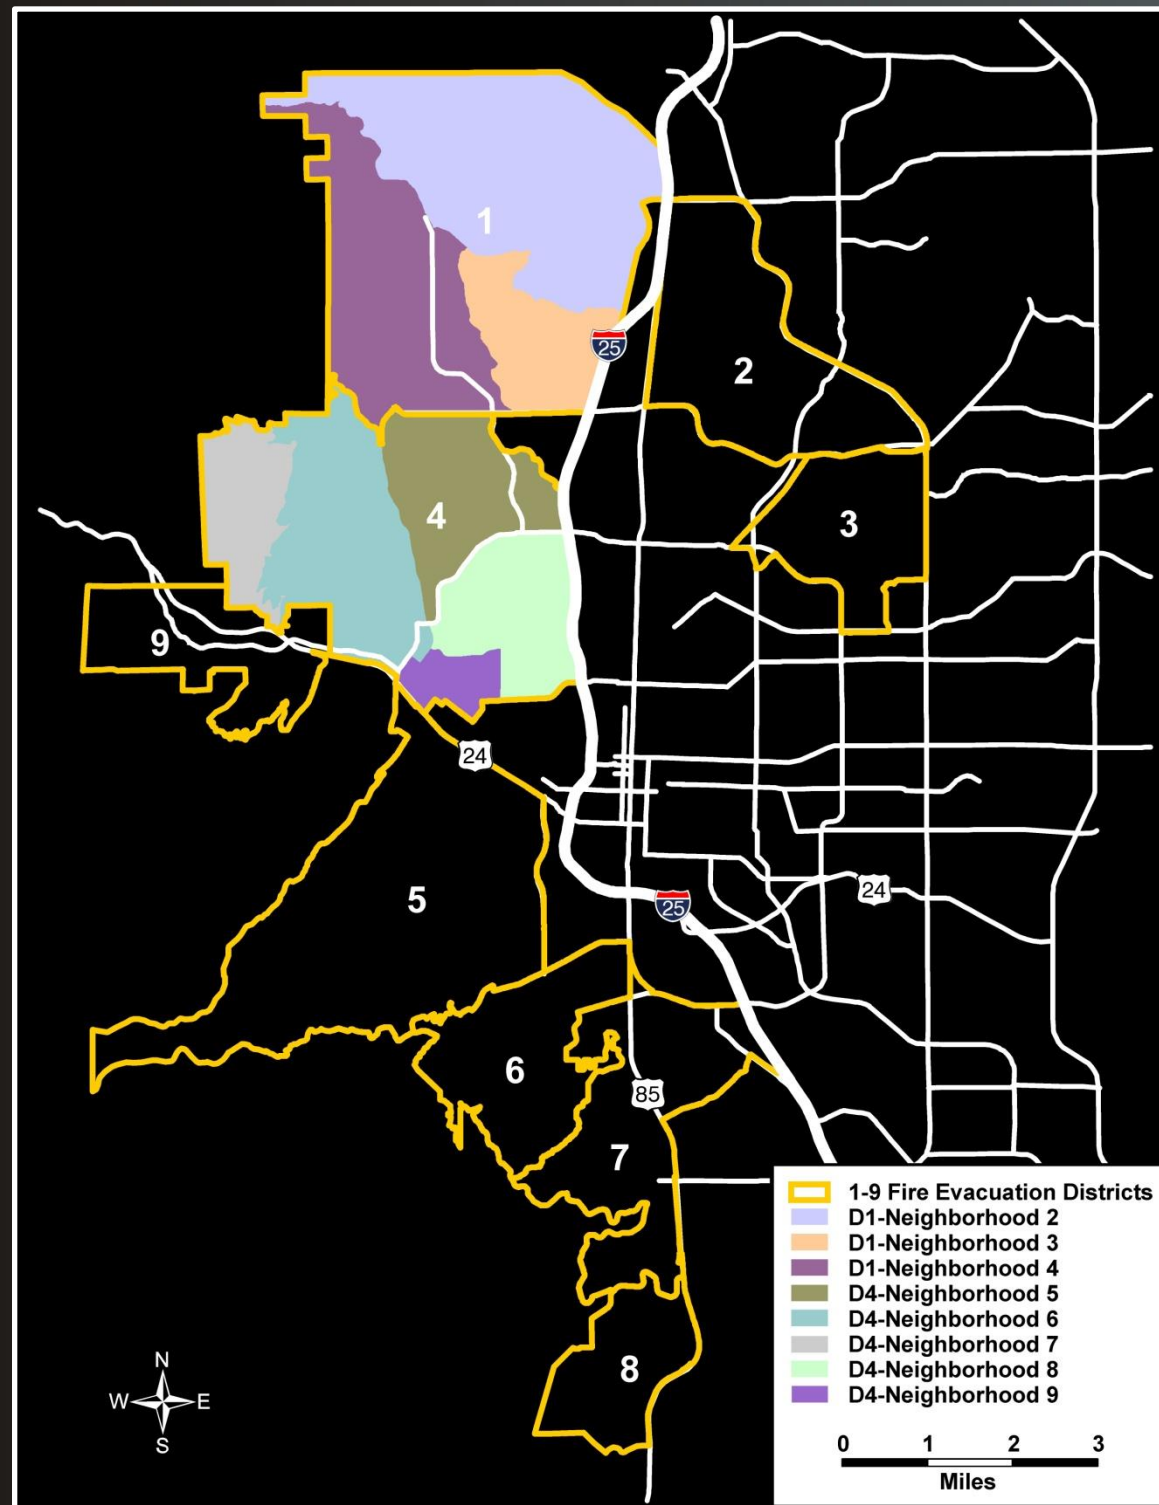

11

- Model / evaluate eight (8) wildfire at-risk districts, each incorporating multiple emergency response neighborhoods
- Model “times-to-evacuate” and screen for “pinch points” using one-hour roadway capacity as the reference criteria
- Develop district-level Traffic Control Plan or advance district to more neighborhood-level analysis

# Step 3: Neighborhood Level Screening

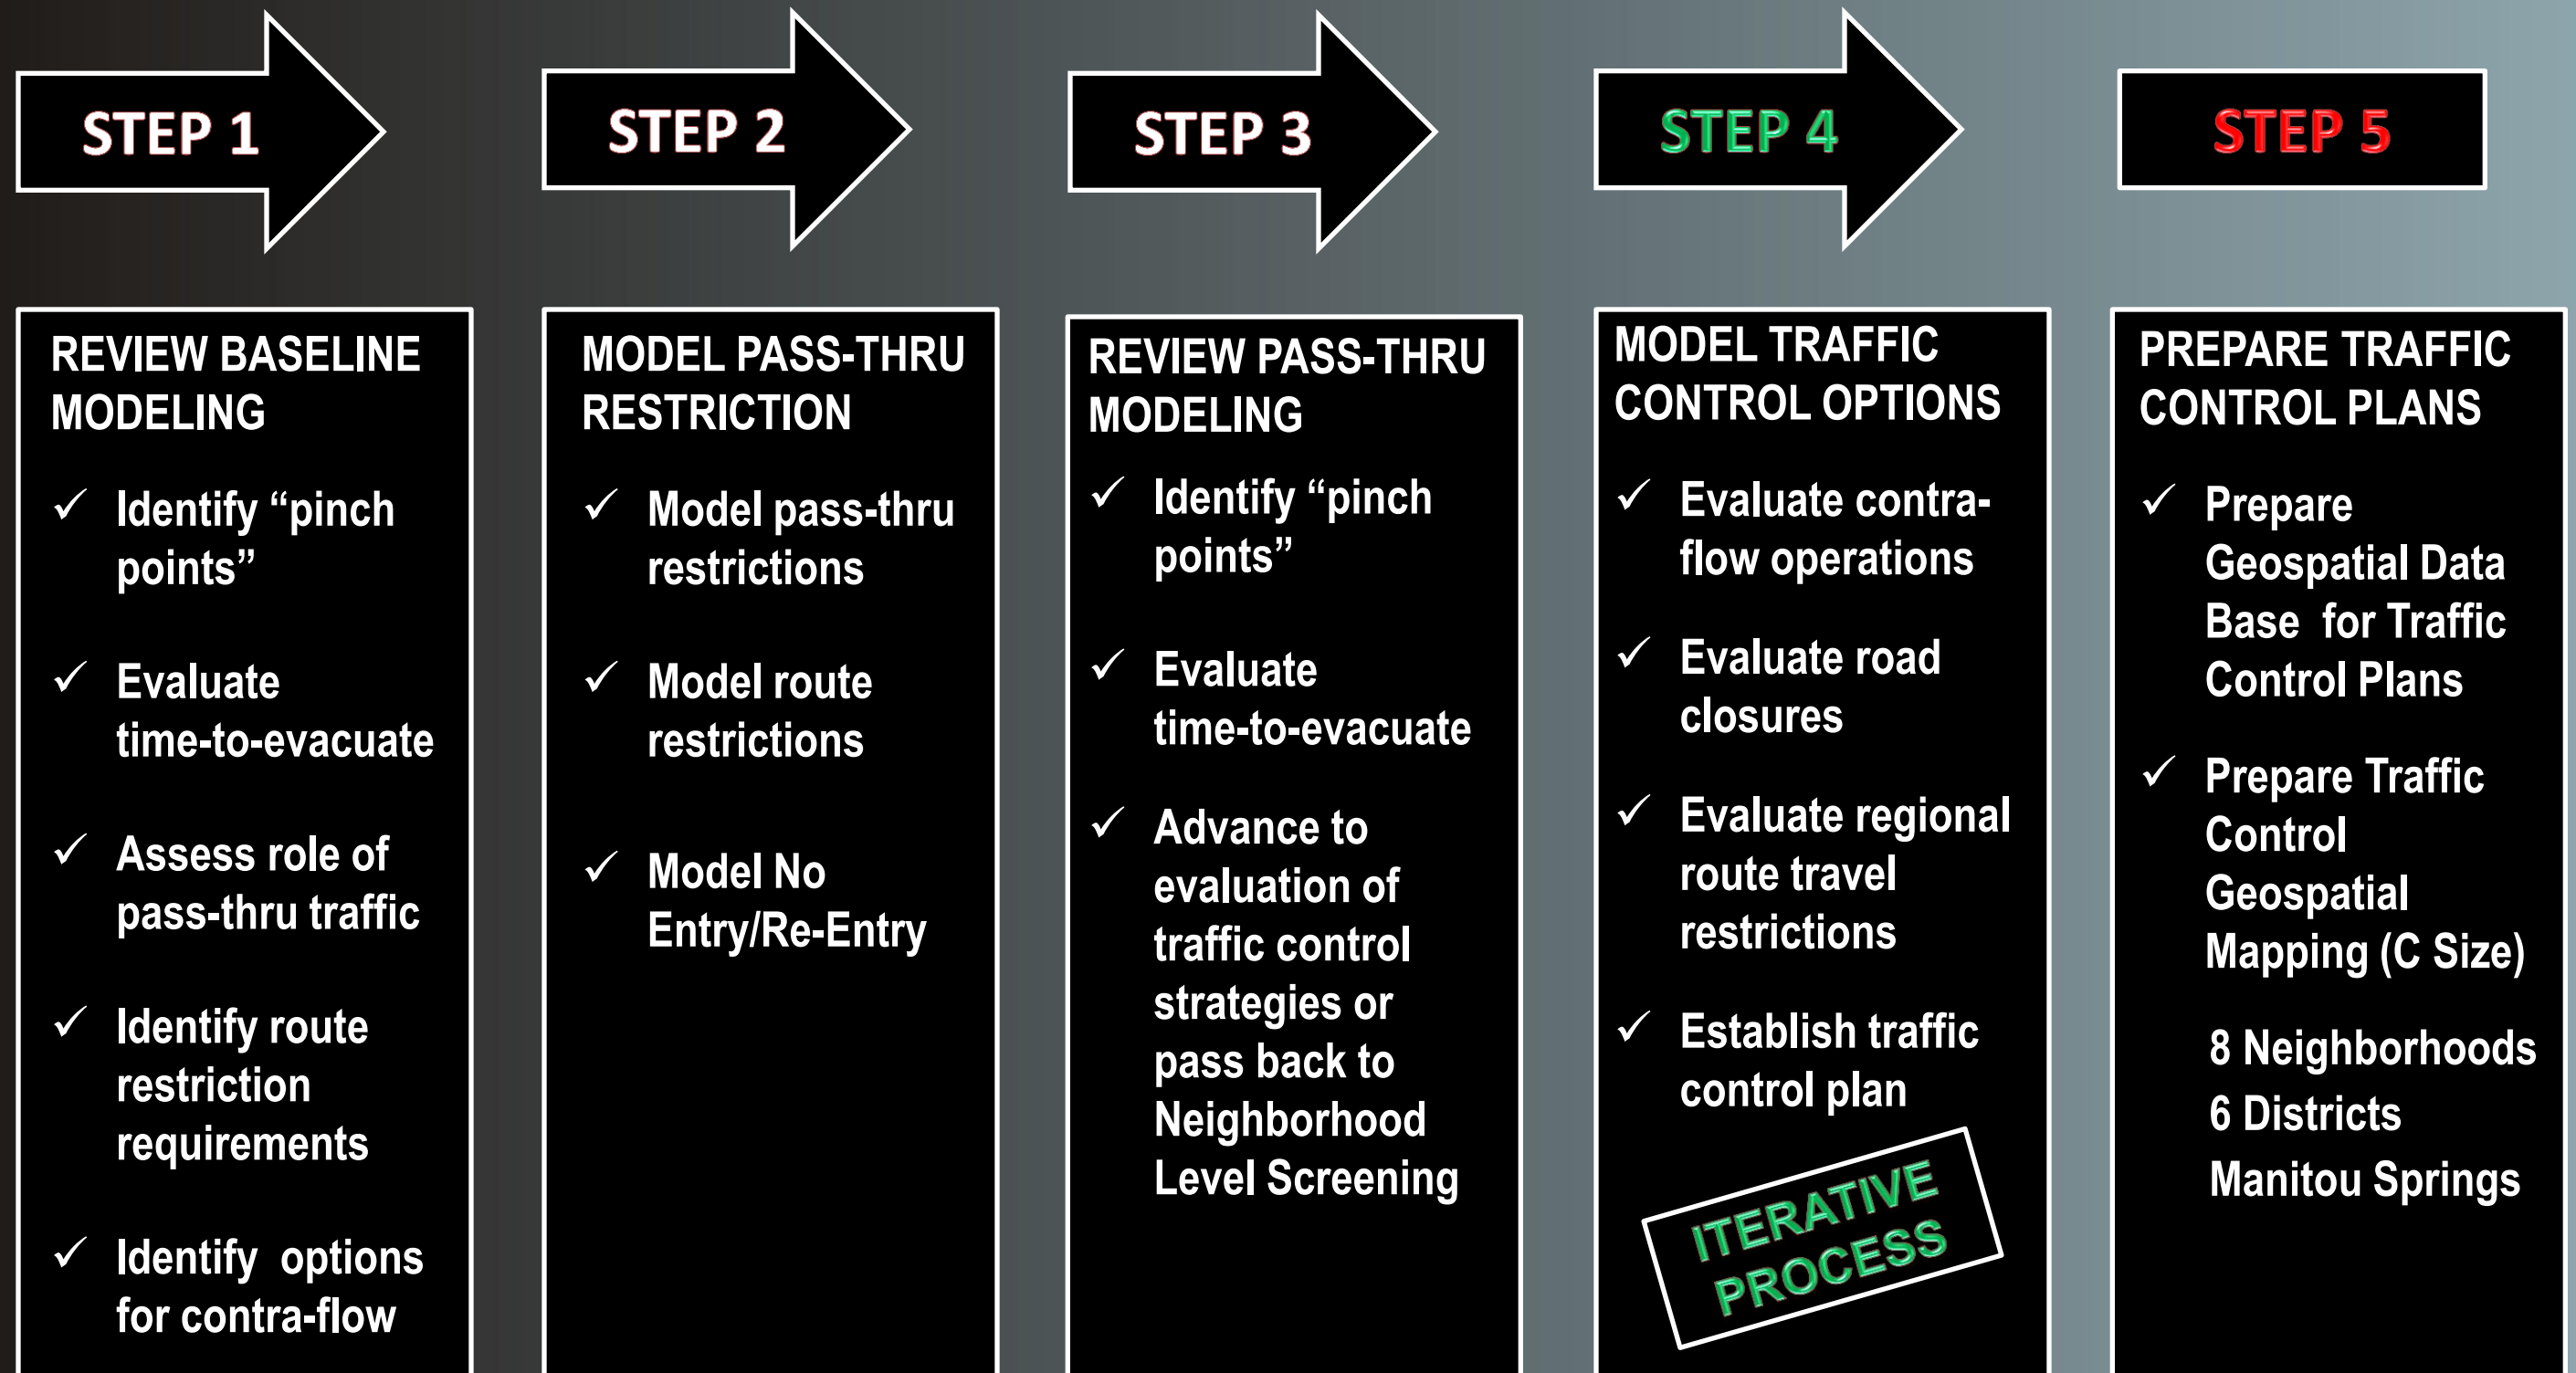

12

- Model evacuation of selected neighborhoods at risk for wildfire
- Model “times-to-evacuate” and screen neighborhoods relative to one-hour roadway capacity reference
- Identify neighborhood evacuation “pinch-points” based on “times-to-evacuate” that exceed one hour (based on one-hour V/C ratios > 1.0)
- Develop neighborhood-level Traffic Control Plan or advance for more detailed traffic control strategy analysis

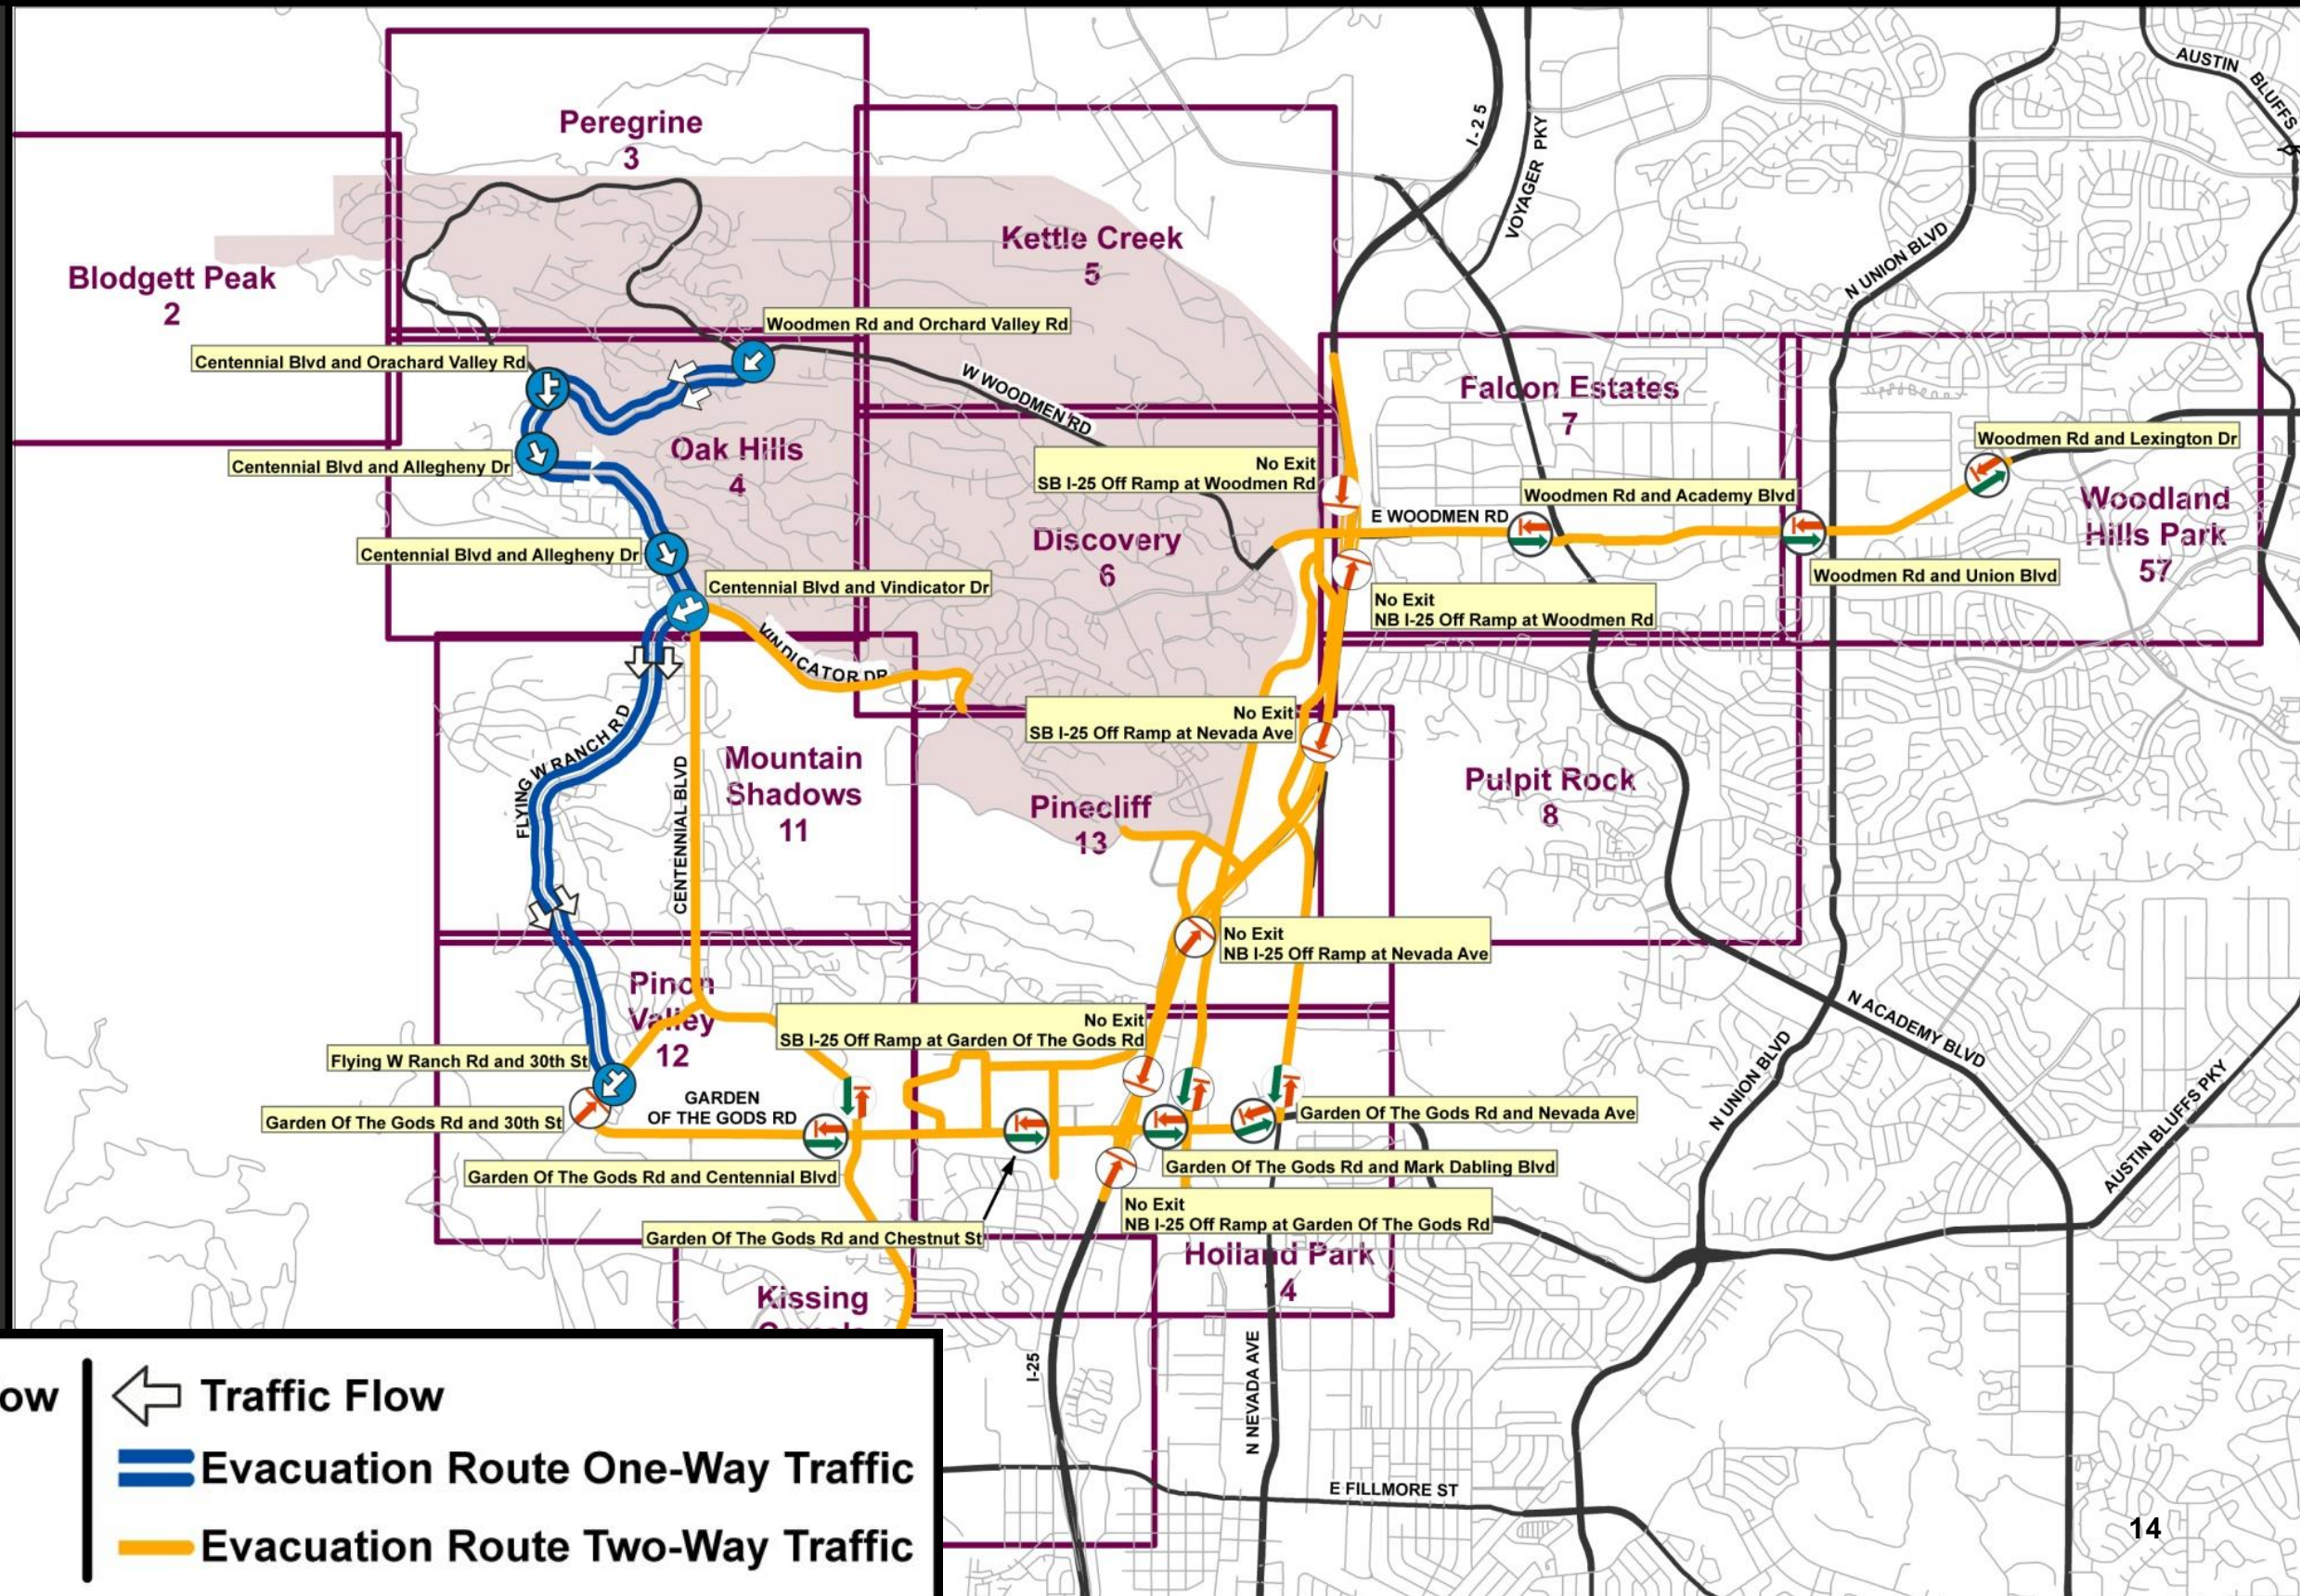

# Step 4: Modeling Traffic Control Strategies

13

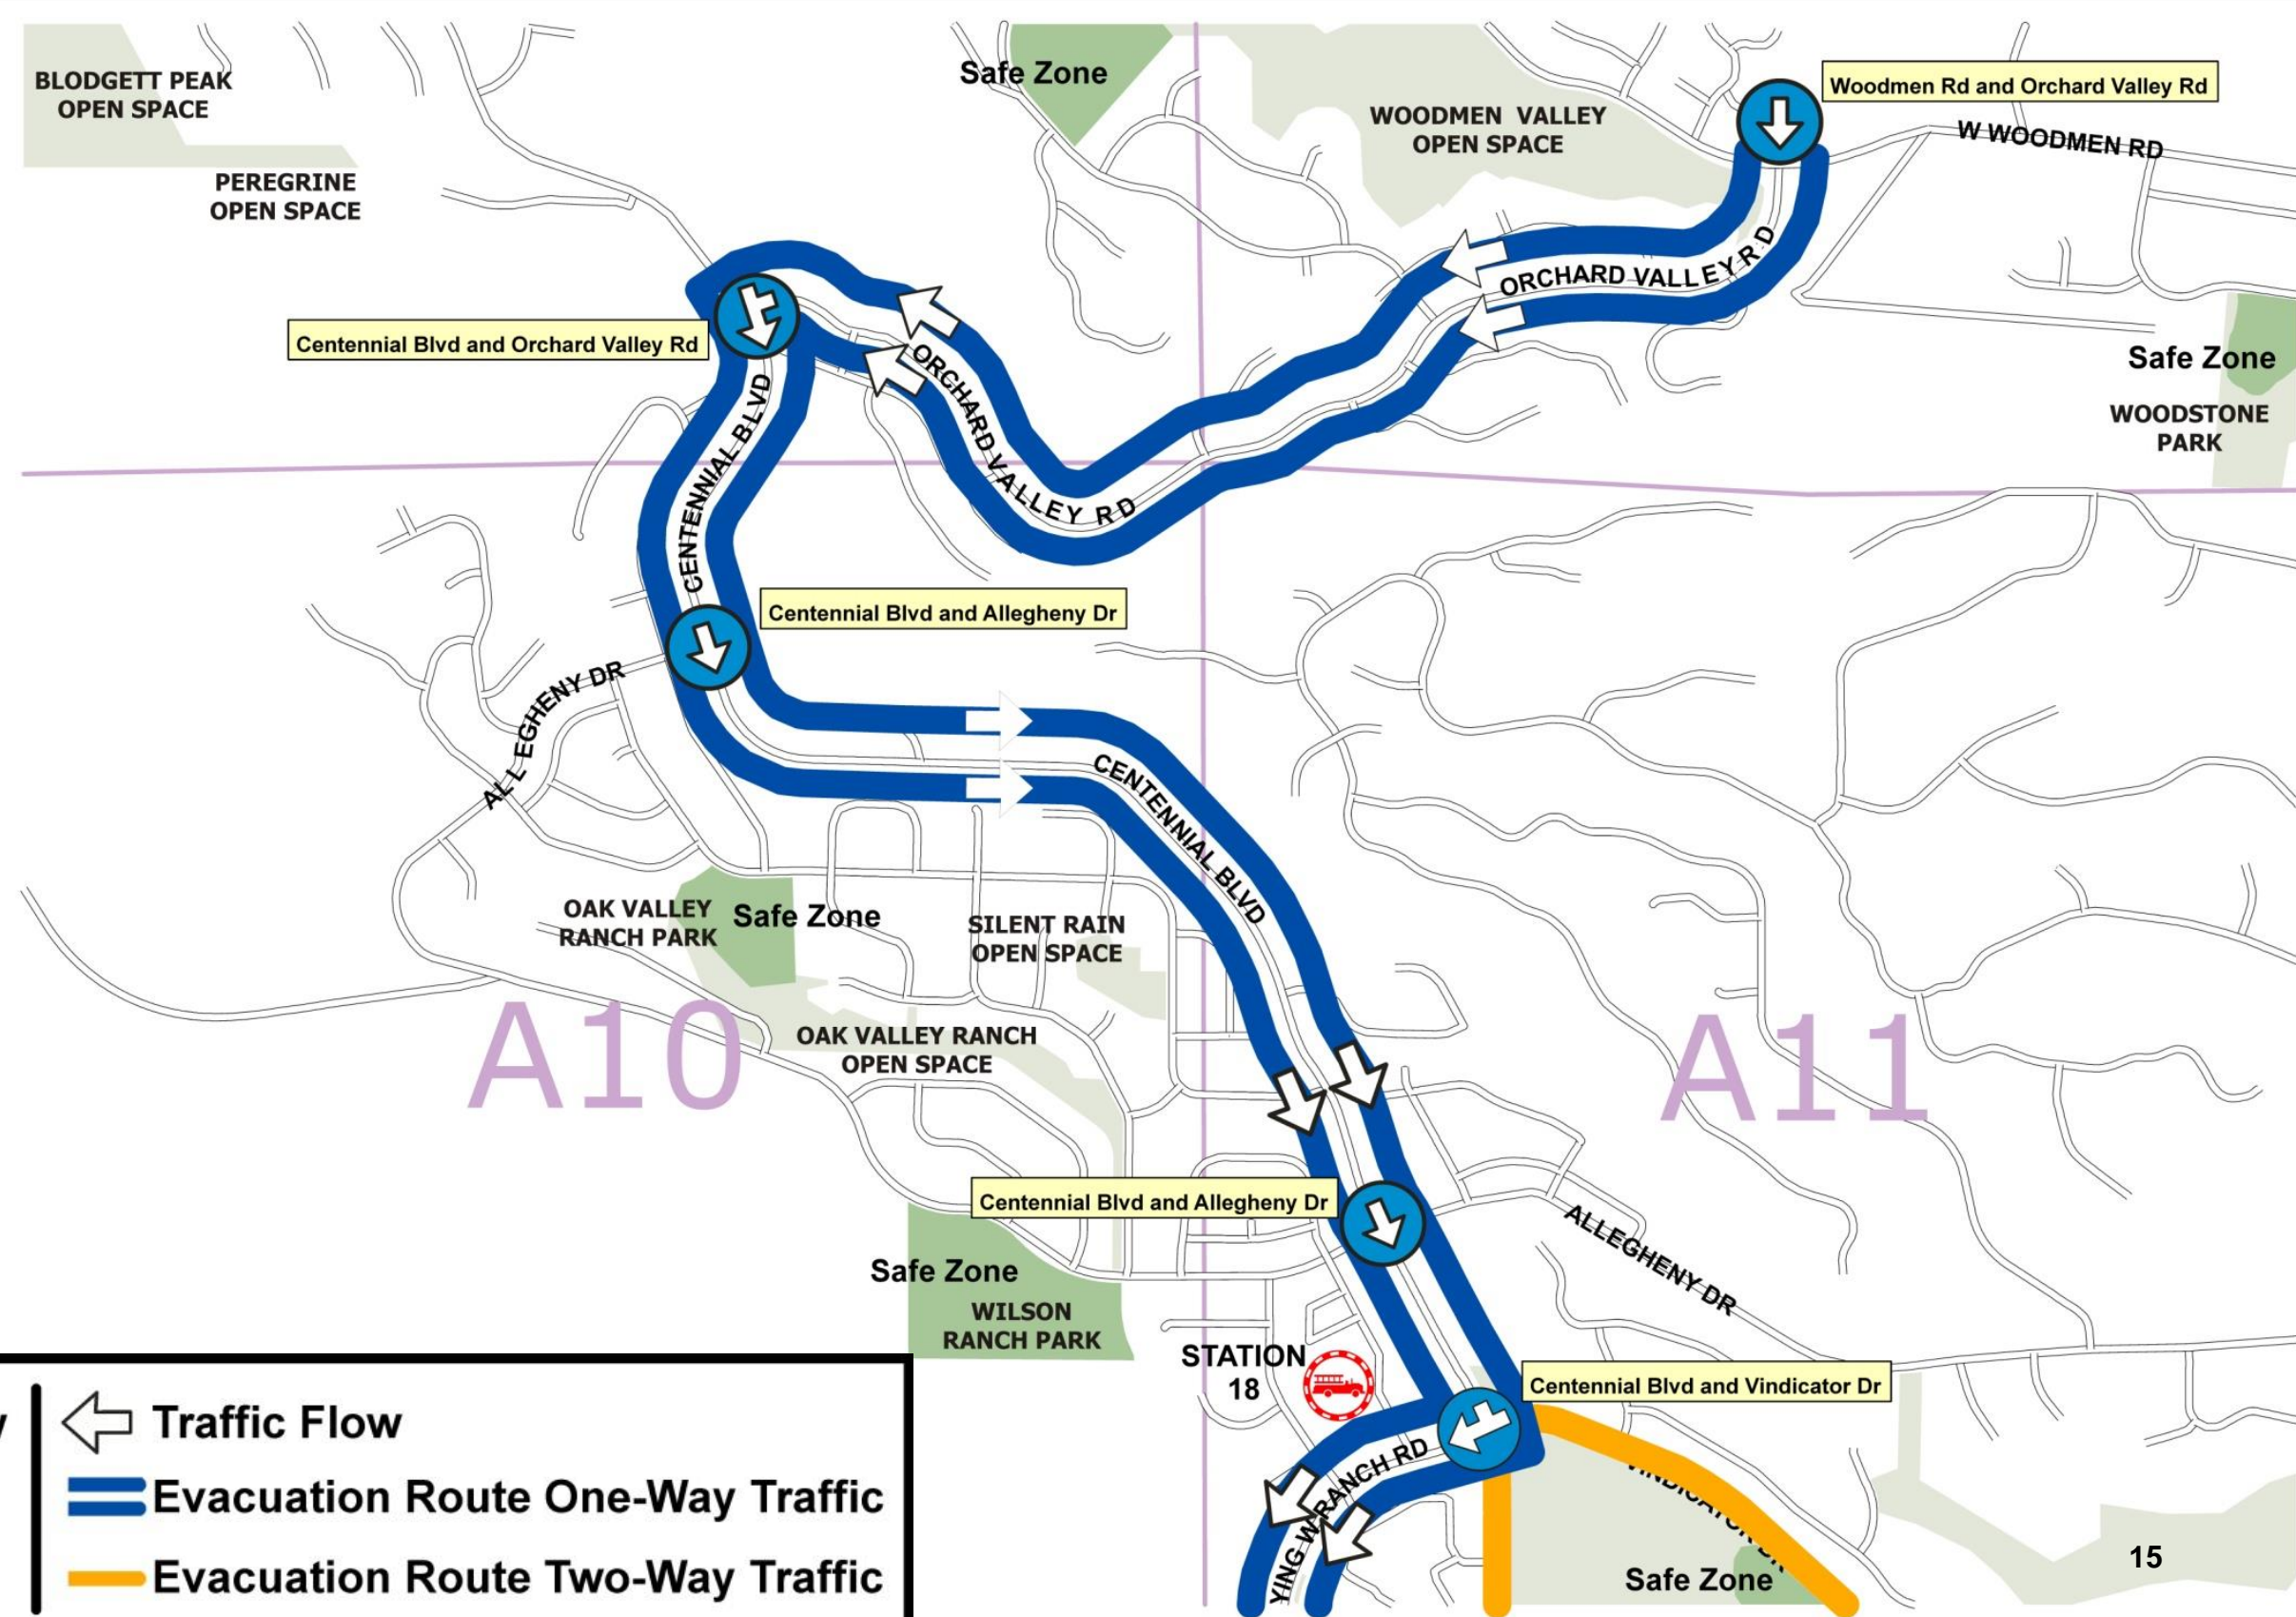

# Step 5: Preparing Traffic Control Plans – Full Area Key Map

14

# Step 5: Preparing Traffic Control Plans – Individual Map Sheet

15

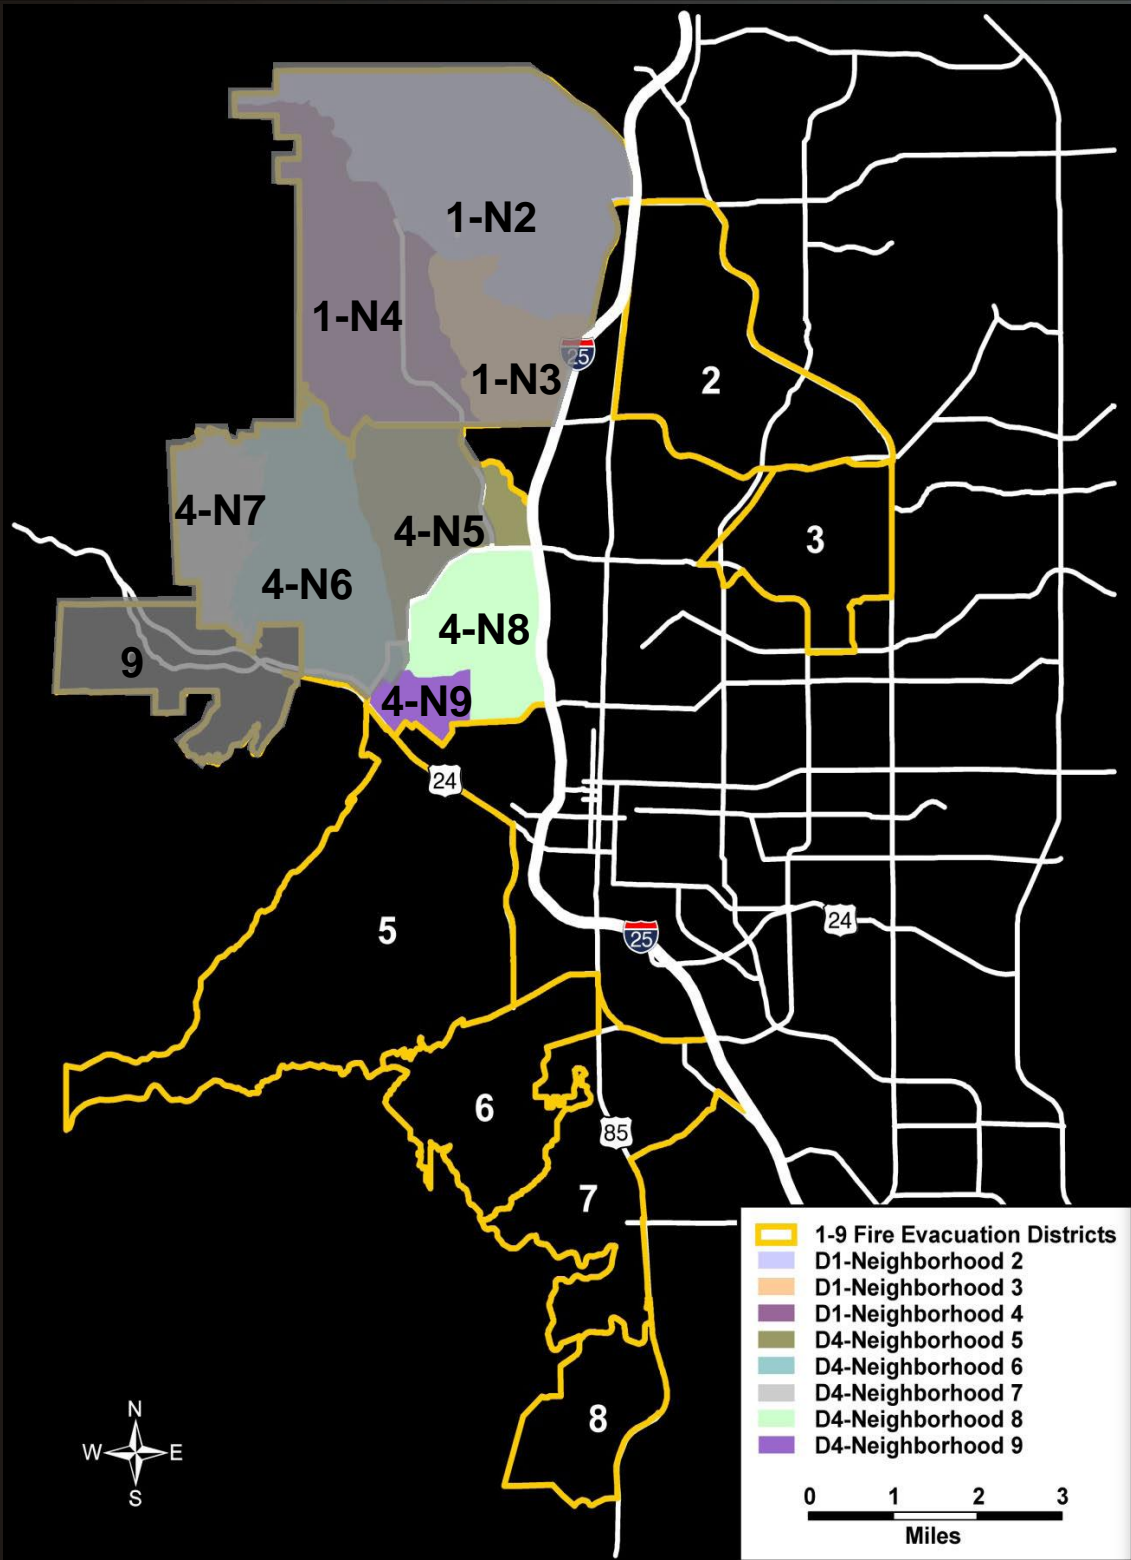

15

## Waldo Canyon Fire Statistics

- 18,247 acres burned
- 347 homes destroyed plus other structures (Flying W Ranch) – **record**
- 2 fatalities, at least 6 injuries
- 32,000 persons evacuated - **record**
- Insurance claims total \$352.6M - **record**

# June 23 – June 26, 2012 – 32,000 Persons Evacuated

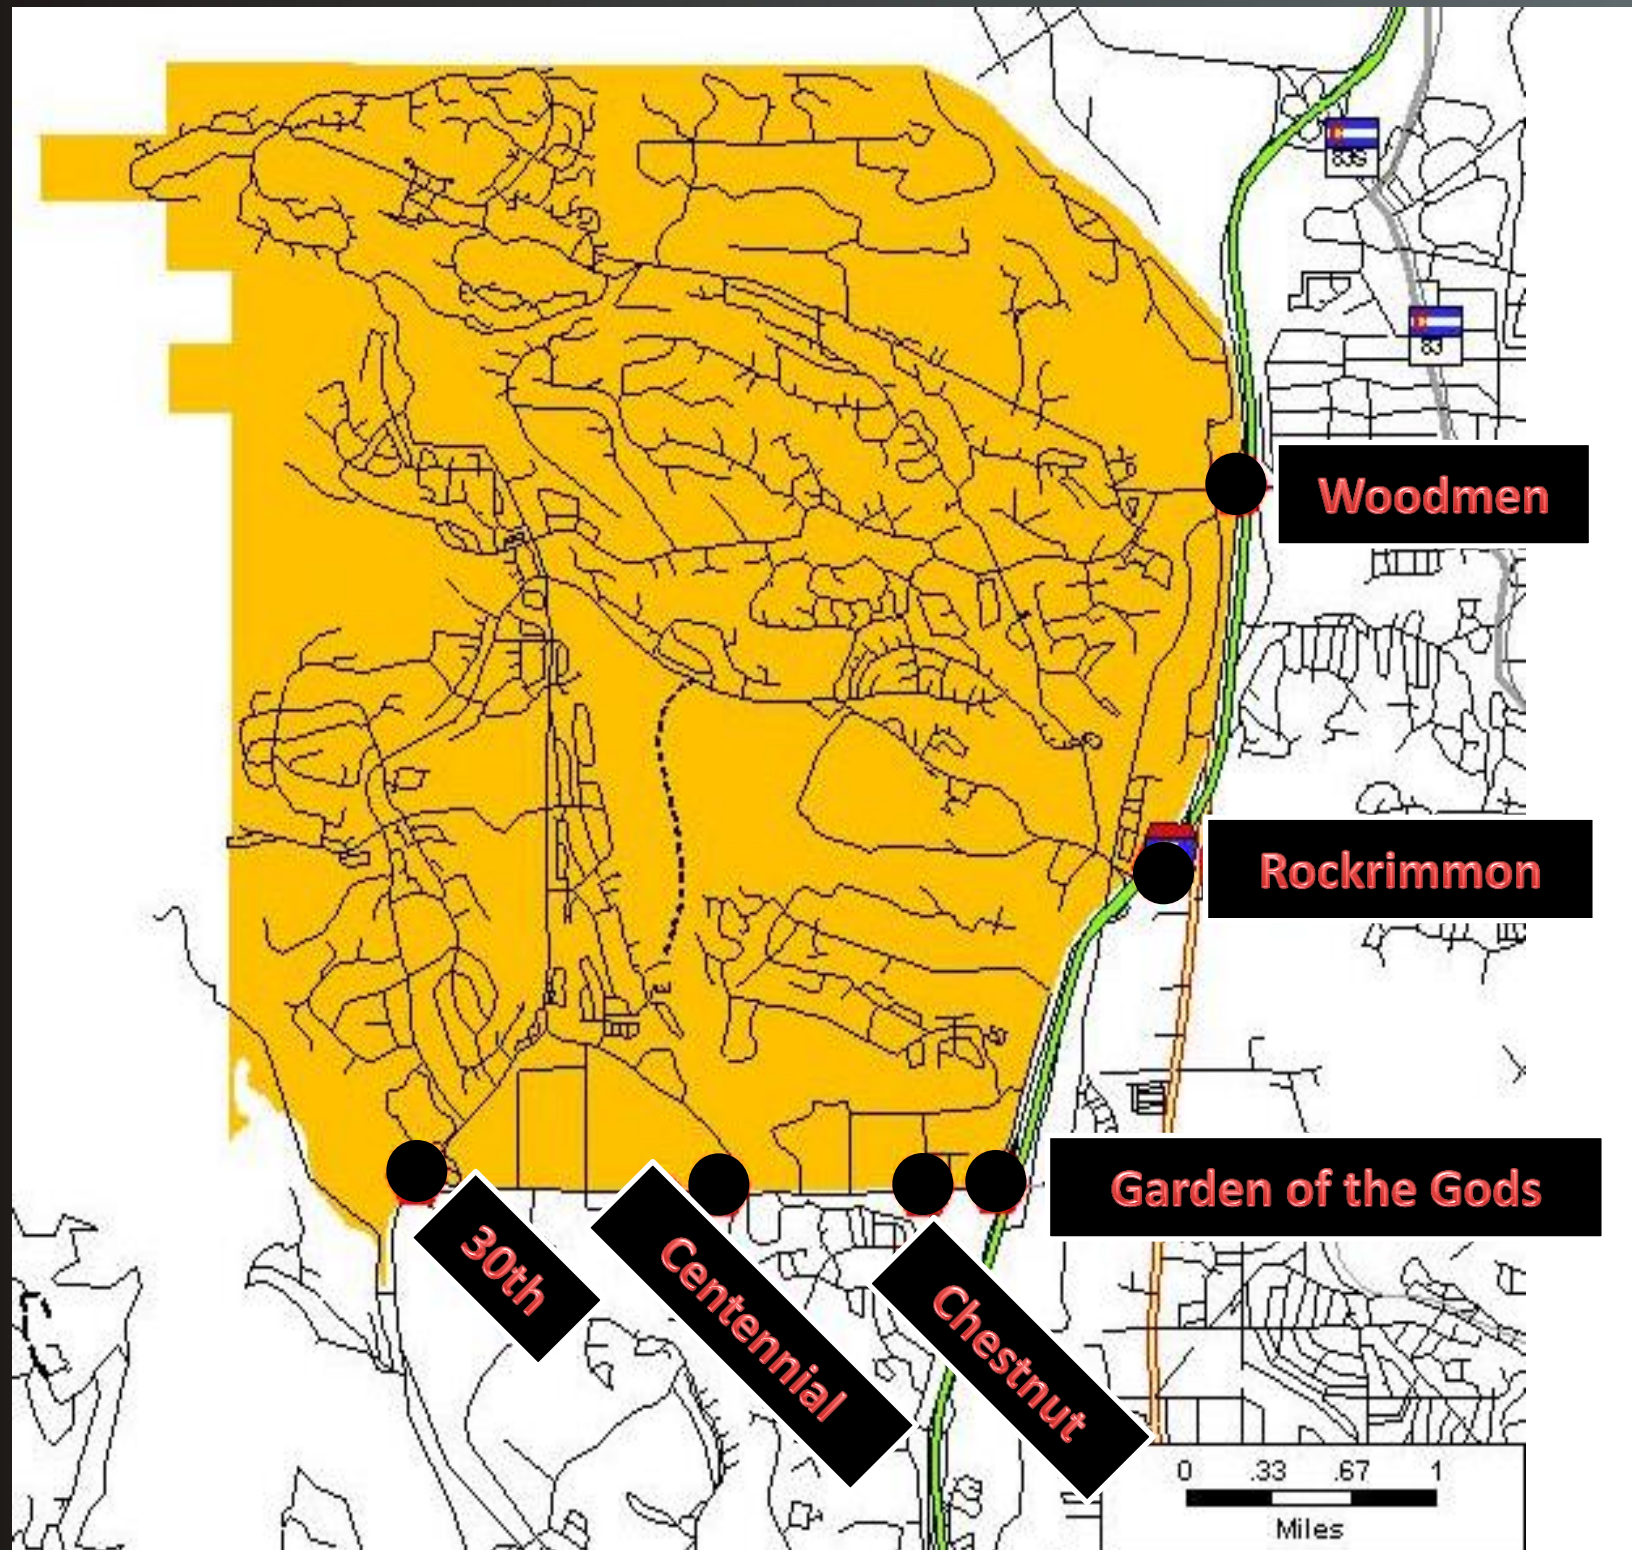

AREA	EVACUATION ZONE	NOTICE TYPE	DATE -TIME	TIME	COUNT
4-N6	Garden of the Gods	Notice: Mandatory	6/23 - 1410		Closed
4-N7	1-Cedar Heights	Notice: Mandatory	6/23 - 1422		406
Part 1-N4	2- South Mountain Shadows	Notice: Voluntary Notice: Mandatory	6/23 - 1458 6/23 - 1531		1,875
9	Manitou Springs	Notice: Mandatory Allowed to return 6/25	6/23 - 1930		4,000
Part 1-N4 Part 1-N2	3-Oak Valley, Peregrine, North Mountain Shadows	No-Notice: Mandatory	6/26 - 1624	1:58	7,950
Part 1-N2	4- North Rockrimmon	No-Notice: Mandatory	6/26 - 1822	1:45	8,025
Part 1-N2 Part 1-N3	7-SE Rockrimmon	No-Notice: Mandatory	6/26 - 1937	0:27	1,850
Part 1-N4 Part 1-N3	6-Popes Valley, Pine Cliff, Woodmen Valley, Pinon Valley	No-Notice: Mandatory	6/26 - 1950	1:56	6,275
				6:06	26,000
Part 4-N5	8-Kissing Camels	No-Notice: Mandatory	6/26 - 2146		1,600

## Traffic Control Measures Implemented

- ✓ Full (Modified) Contra-flow Operations
- ✓ No-entry / No Re-entry
- ✓ Roadway Closures
  - WB Garden of the Gods Road at I-25
  - NB 30th at Fontmore
  - Fillmore/Fontmore at Mesa
- ✓ I-25 / Ramp Operation Closures
  - All WB traffic from I-25 blocked at the Woodmen Road, Nevada-Rockrimmon, Garden of the Gods Road and Fillmore Street I-25 exits
  - I-25 closed to non-evacuation traffic

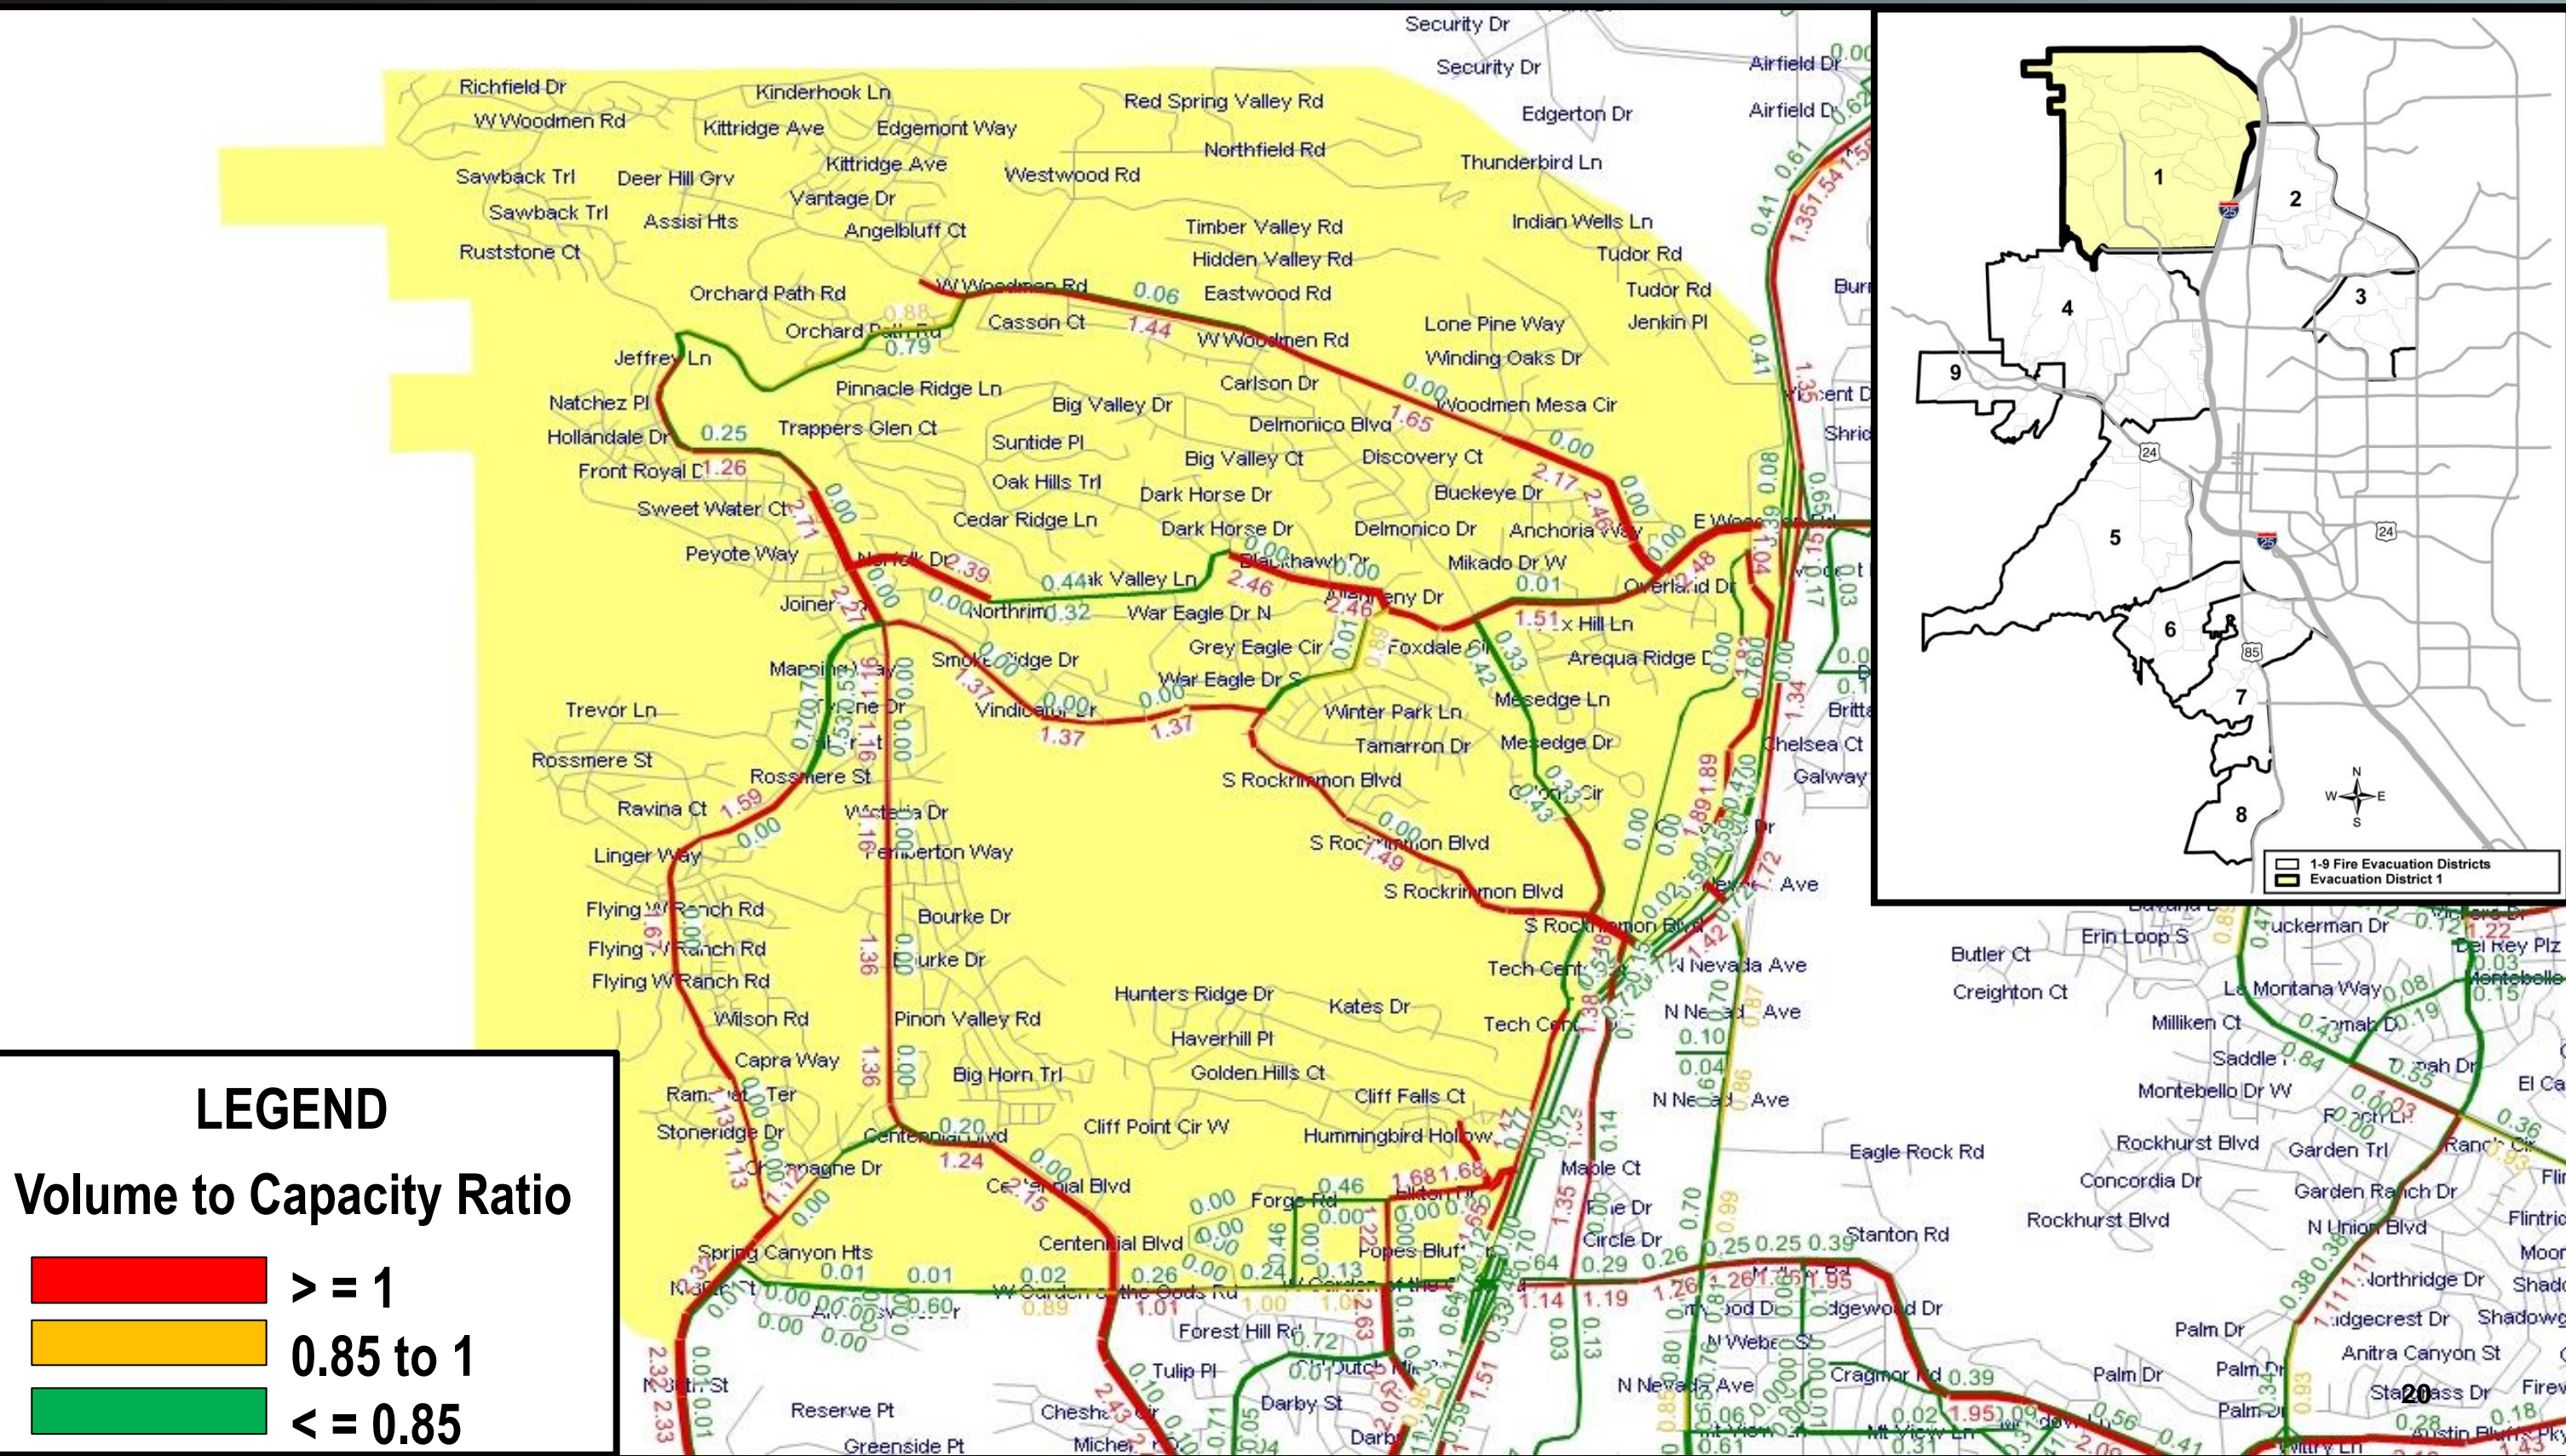

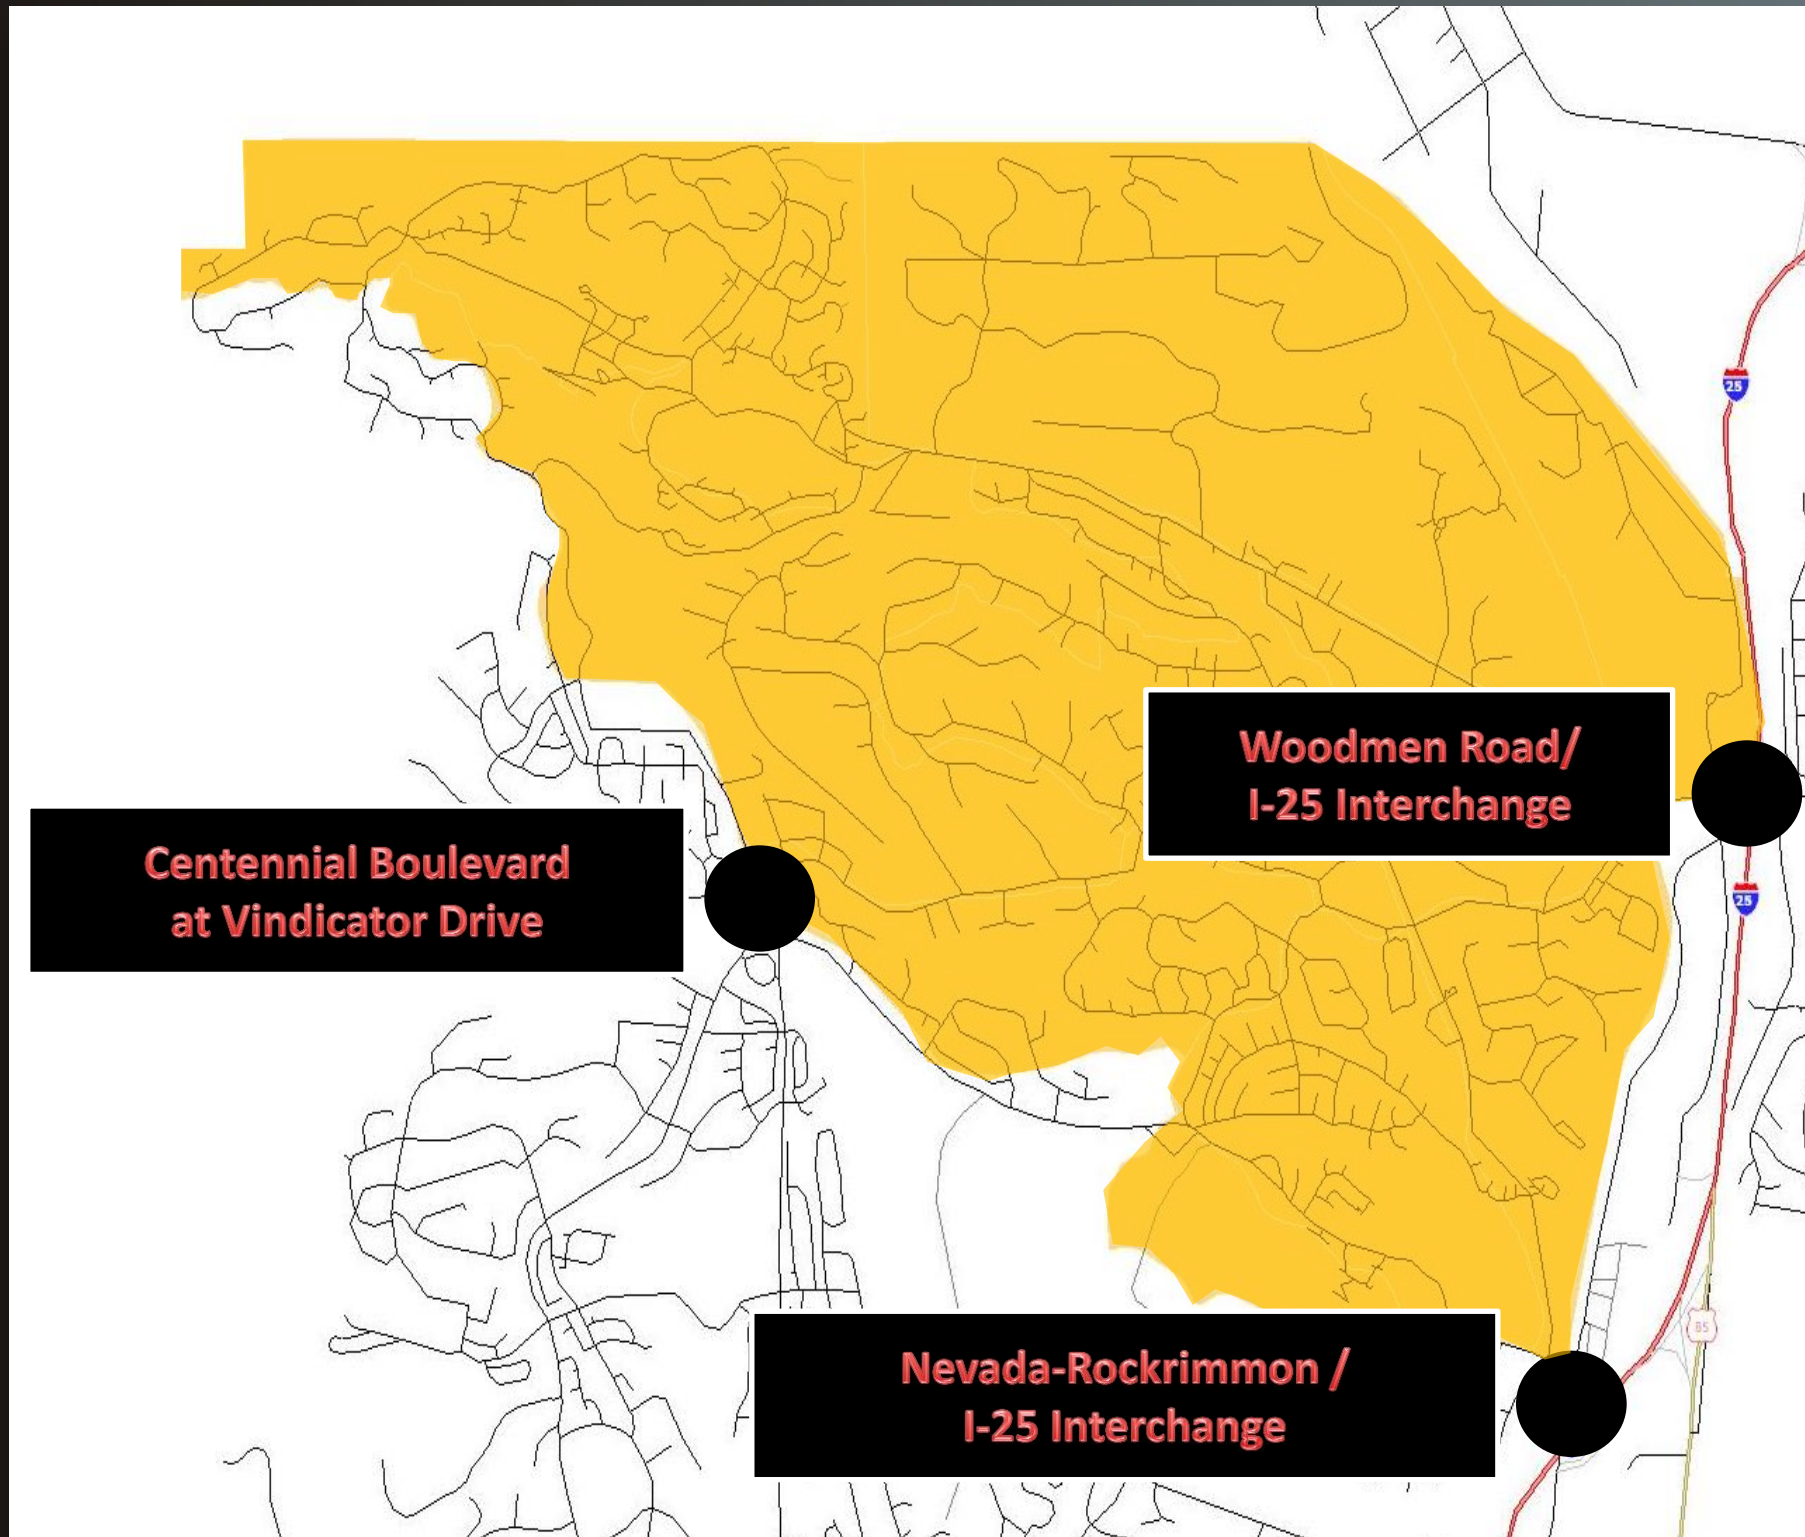

## DISTRICT STATISTICS

- ✓ 12,300 Households
- ✓ 25,830 Persons
- ✓ 6 Egress Portals
  - 30<sup>th</sup> Street
  - Centennial Boulevard
  - Chestnut Street
  - Garden of the Gods/I-25
  - Nevada-Rockrimmon/I-25
  - Woodmen Road/I-25
- ✓ District Size
  - East-west - 4 miles
  - North-south - 4 miles
- ✓ I-25 provides primary evacuation route

# District 1 - Baseline V/C Ratio Results

20

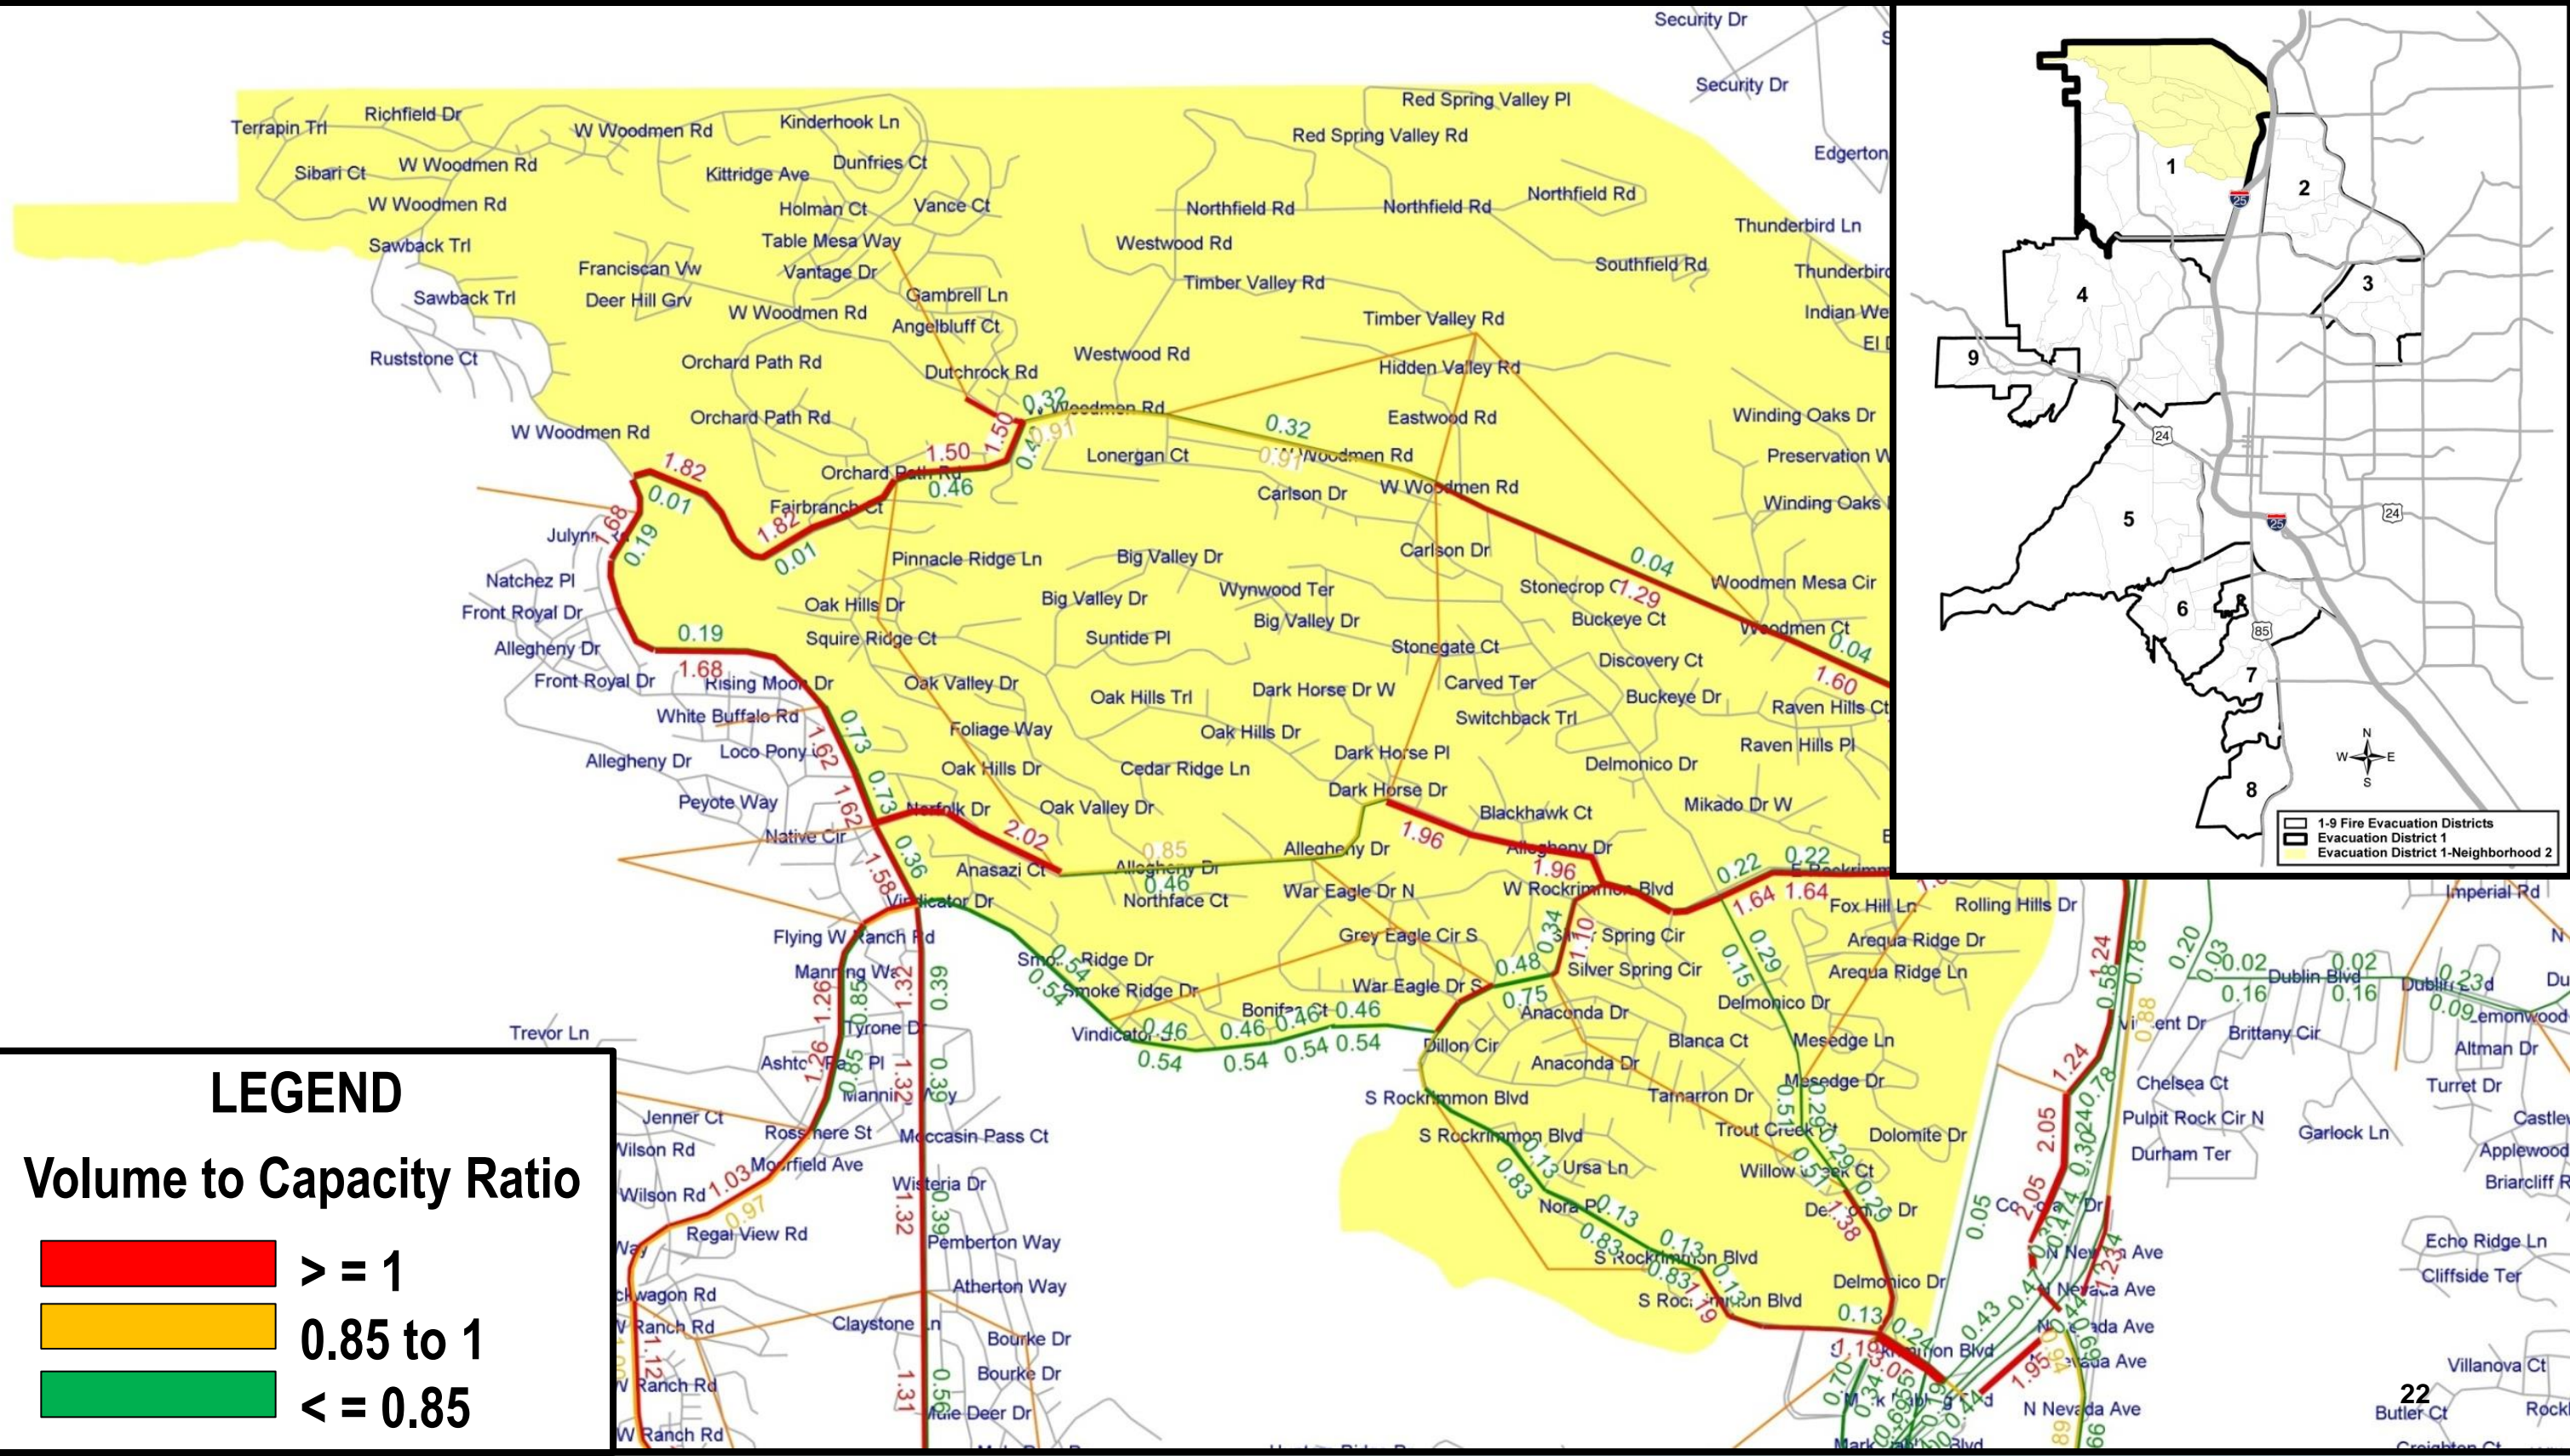

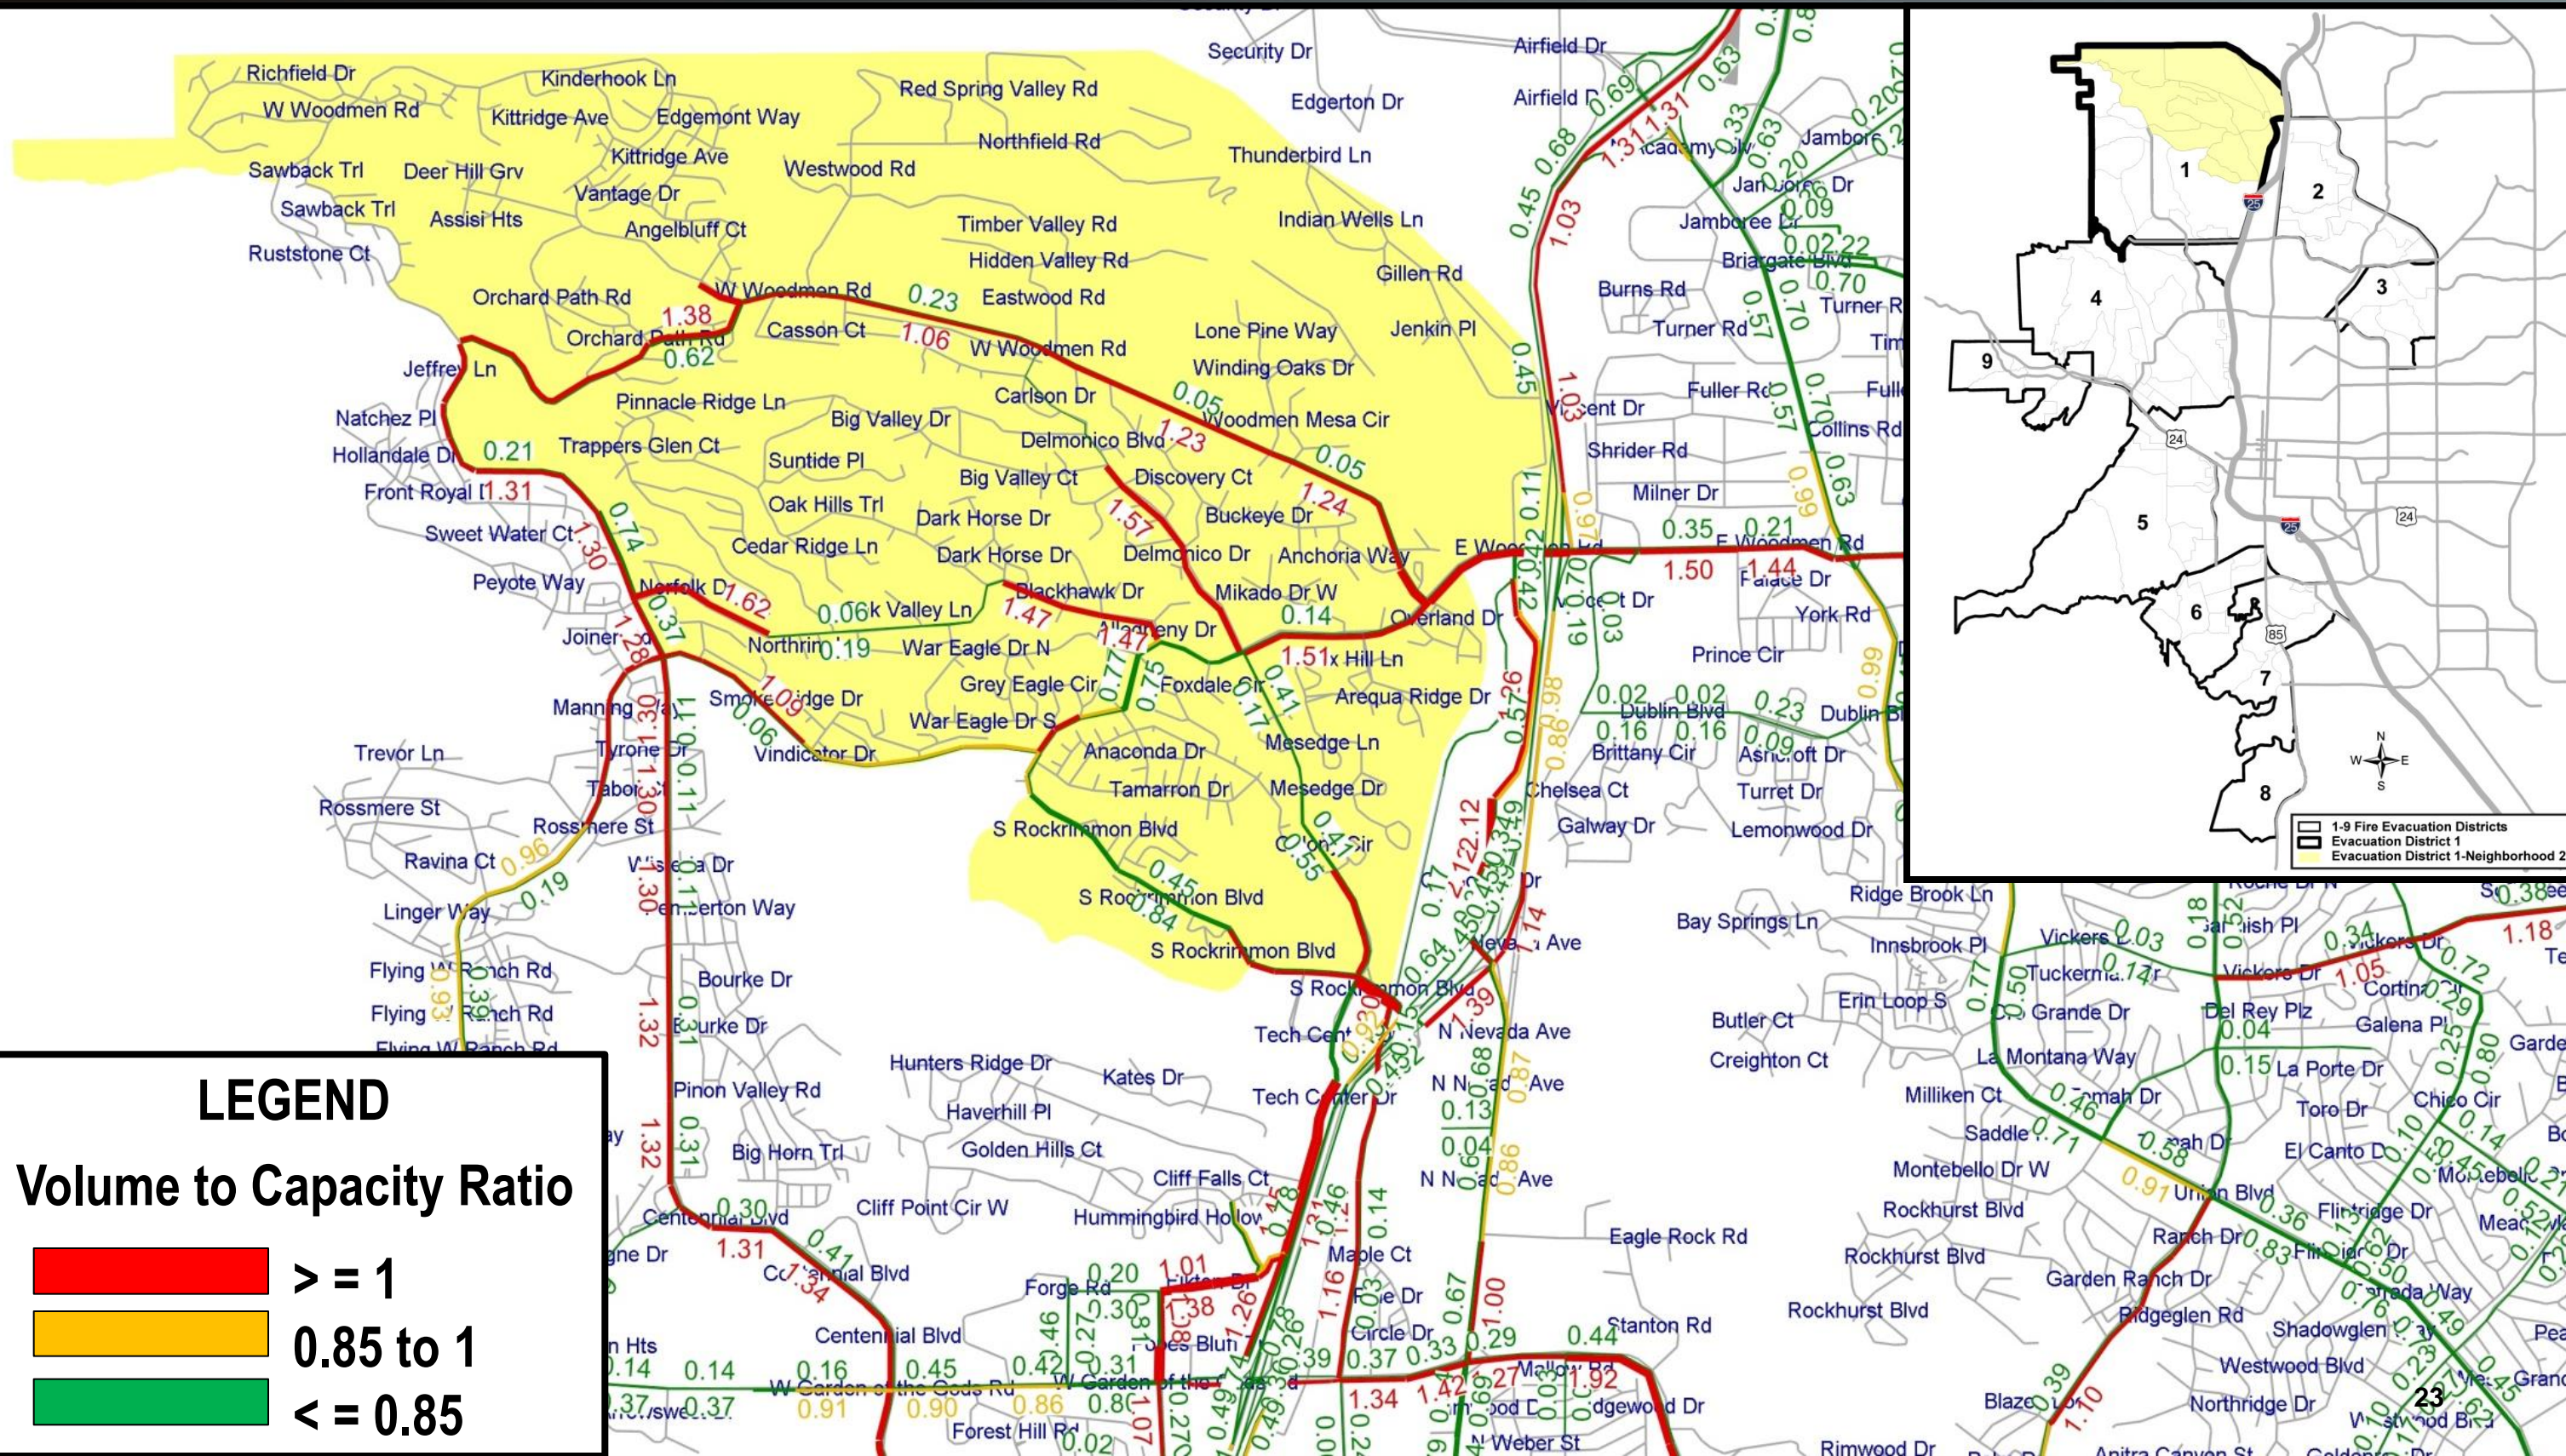

## NEIGHBORHOOD STATISTICS

- ✓ 6,700 Households
- ✓ 14,070 Persons
- ✓ 3 Egress Portals
  - Centennial Boulevard
  - Nevada-Rockrimmon/I-25
  - Woodmen Road/I-25
- ✓ Neighborhood Size
  - East-west - 4 miles
  - North-south - 3 miles
- ✓ I-25 provides primary evacuation route

# District 1 Neighborhood 2 – Baseline V/C Ratio Results

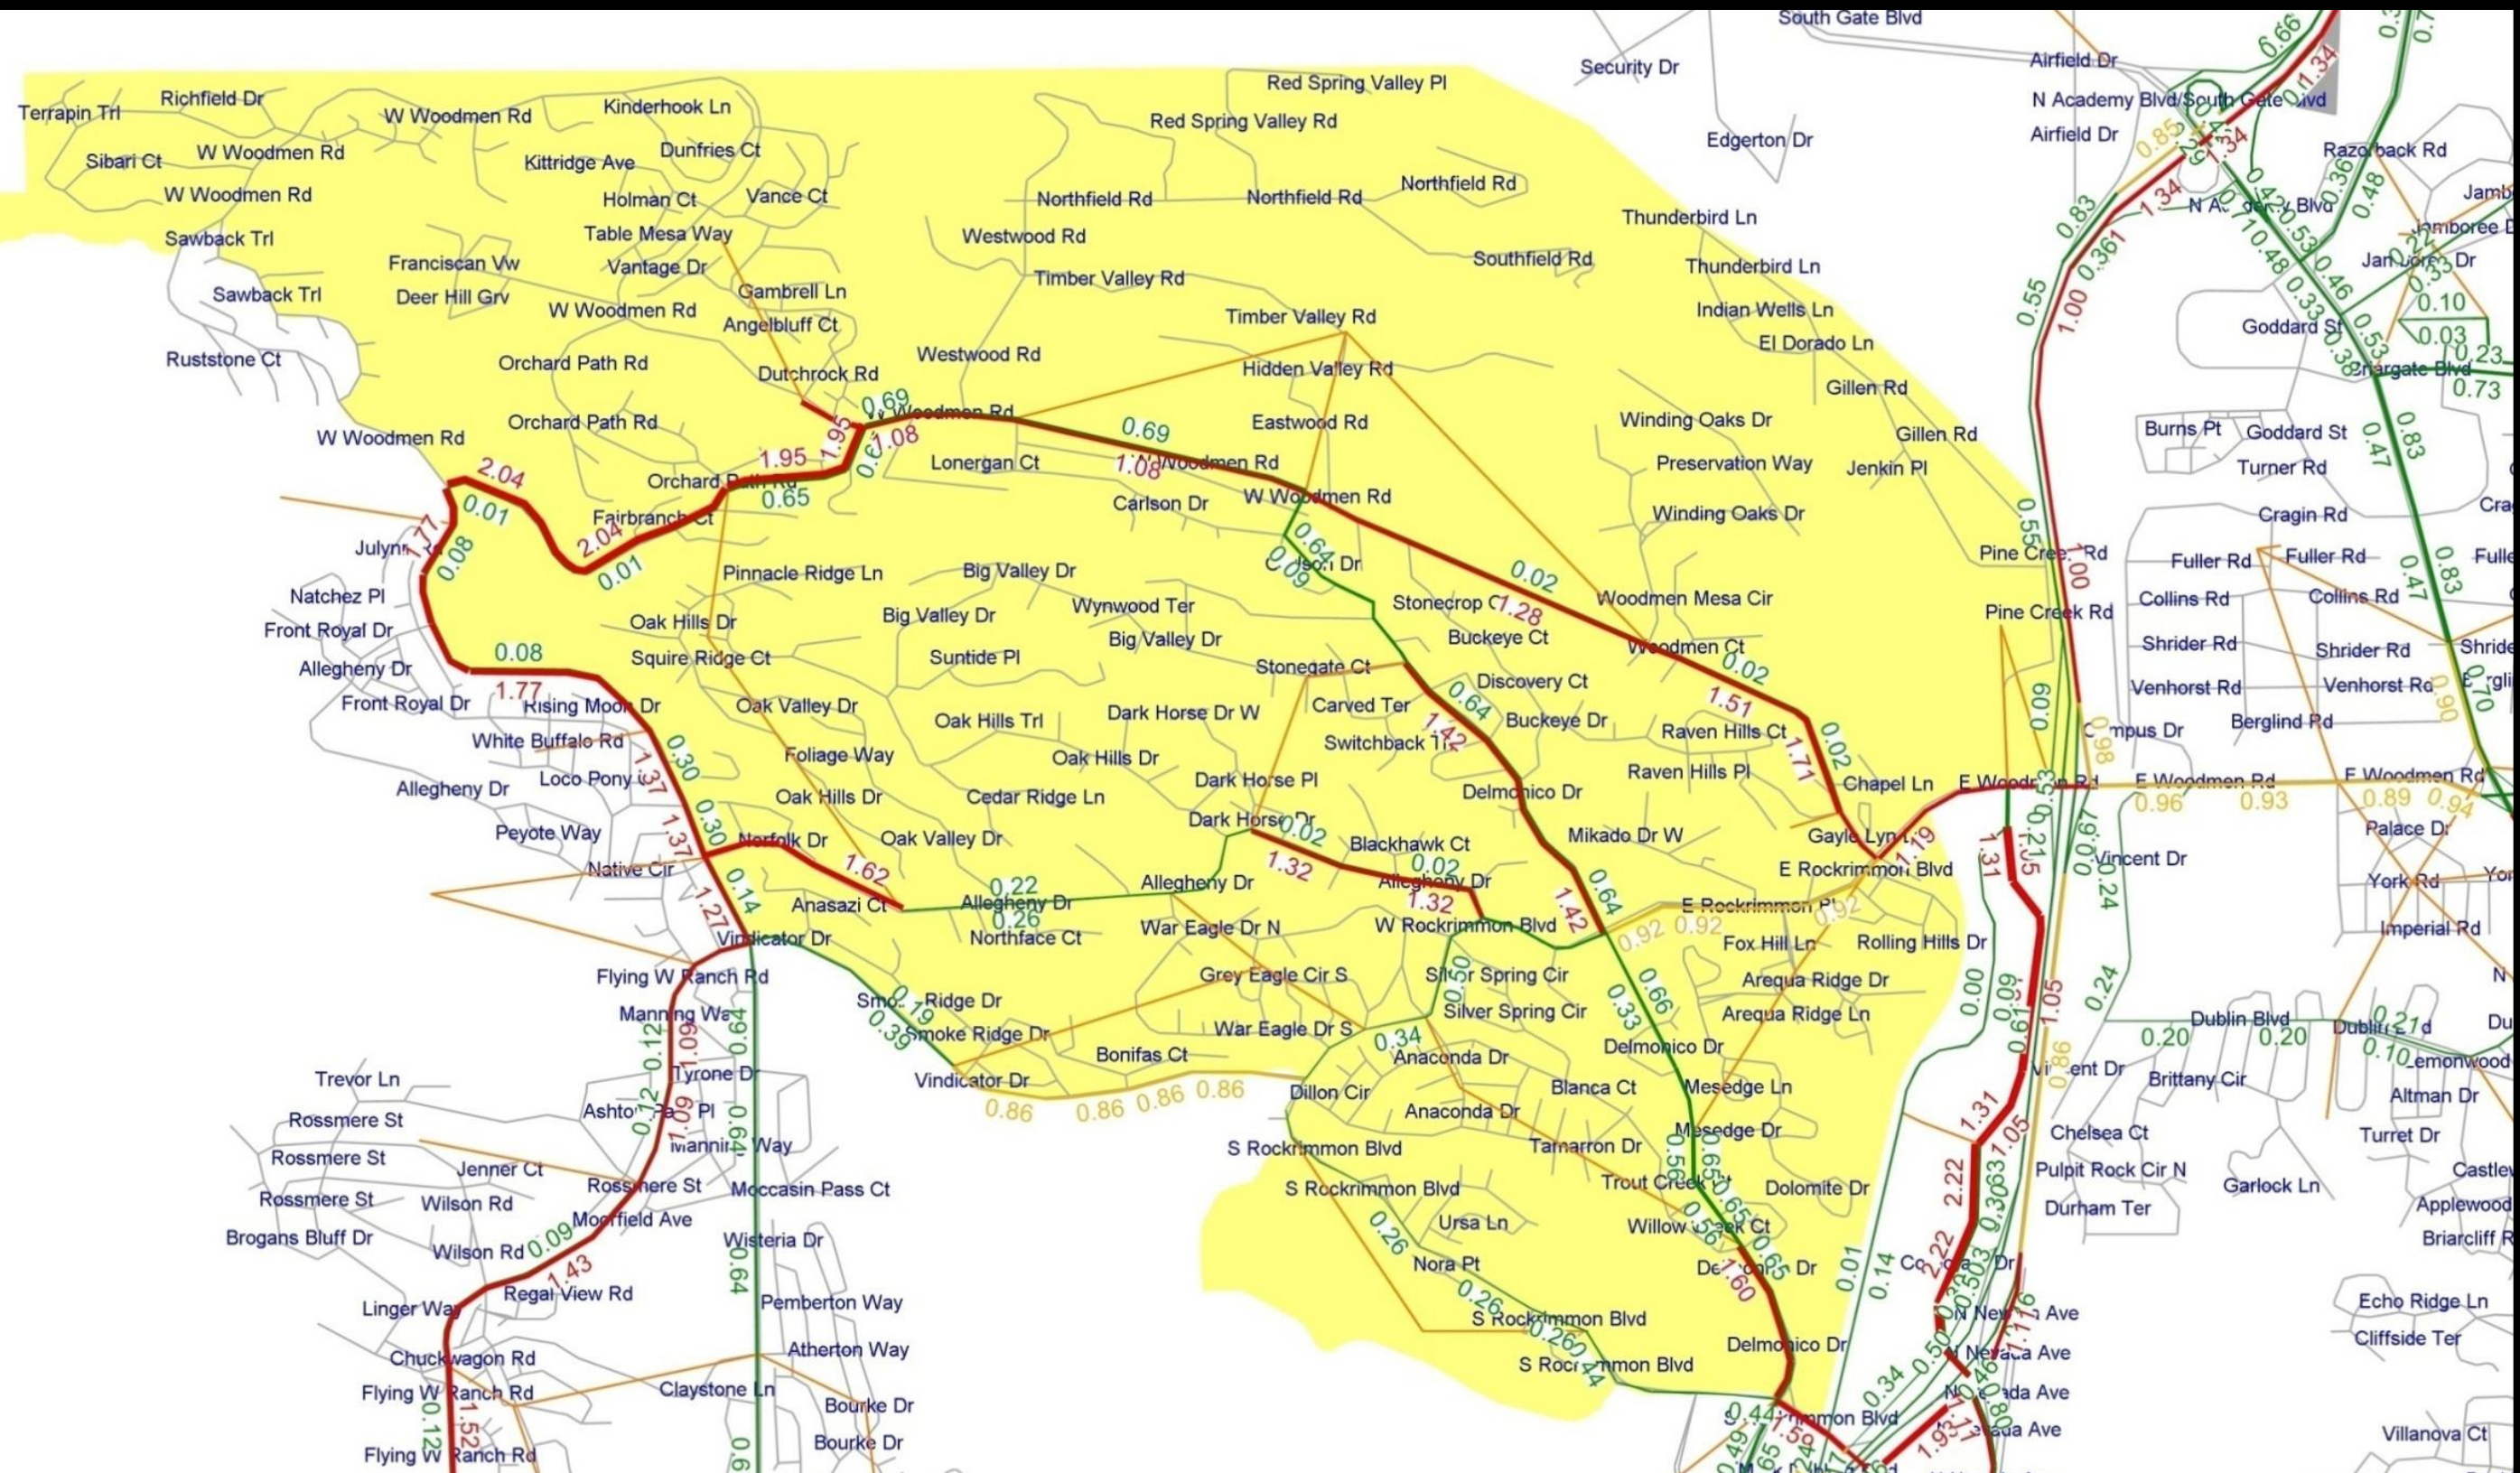

# District 1 Neighborhood 2 – Cut Through Traffic Prohibited

The map displays a network of roads with numerical values indicating distances or costs. The yellow highlighted area is a central residential zone. Three large black arrows originate from this zone and point towards the right side of the map, indicating a flow or direction. The map includes street names like W Woodmen Rd, Northfield Rd, and South Gate Blvd. Numerical values are displayed in red and green along the routes.

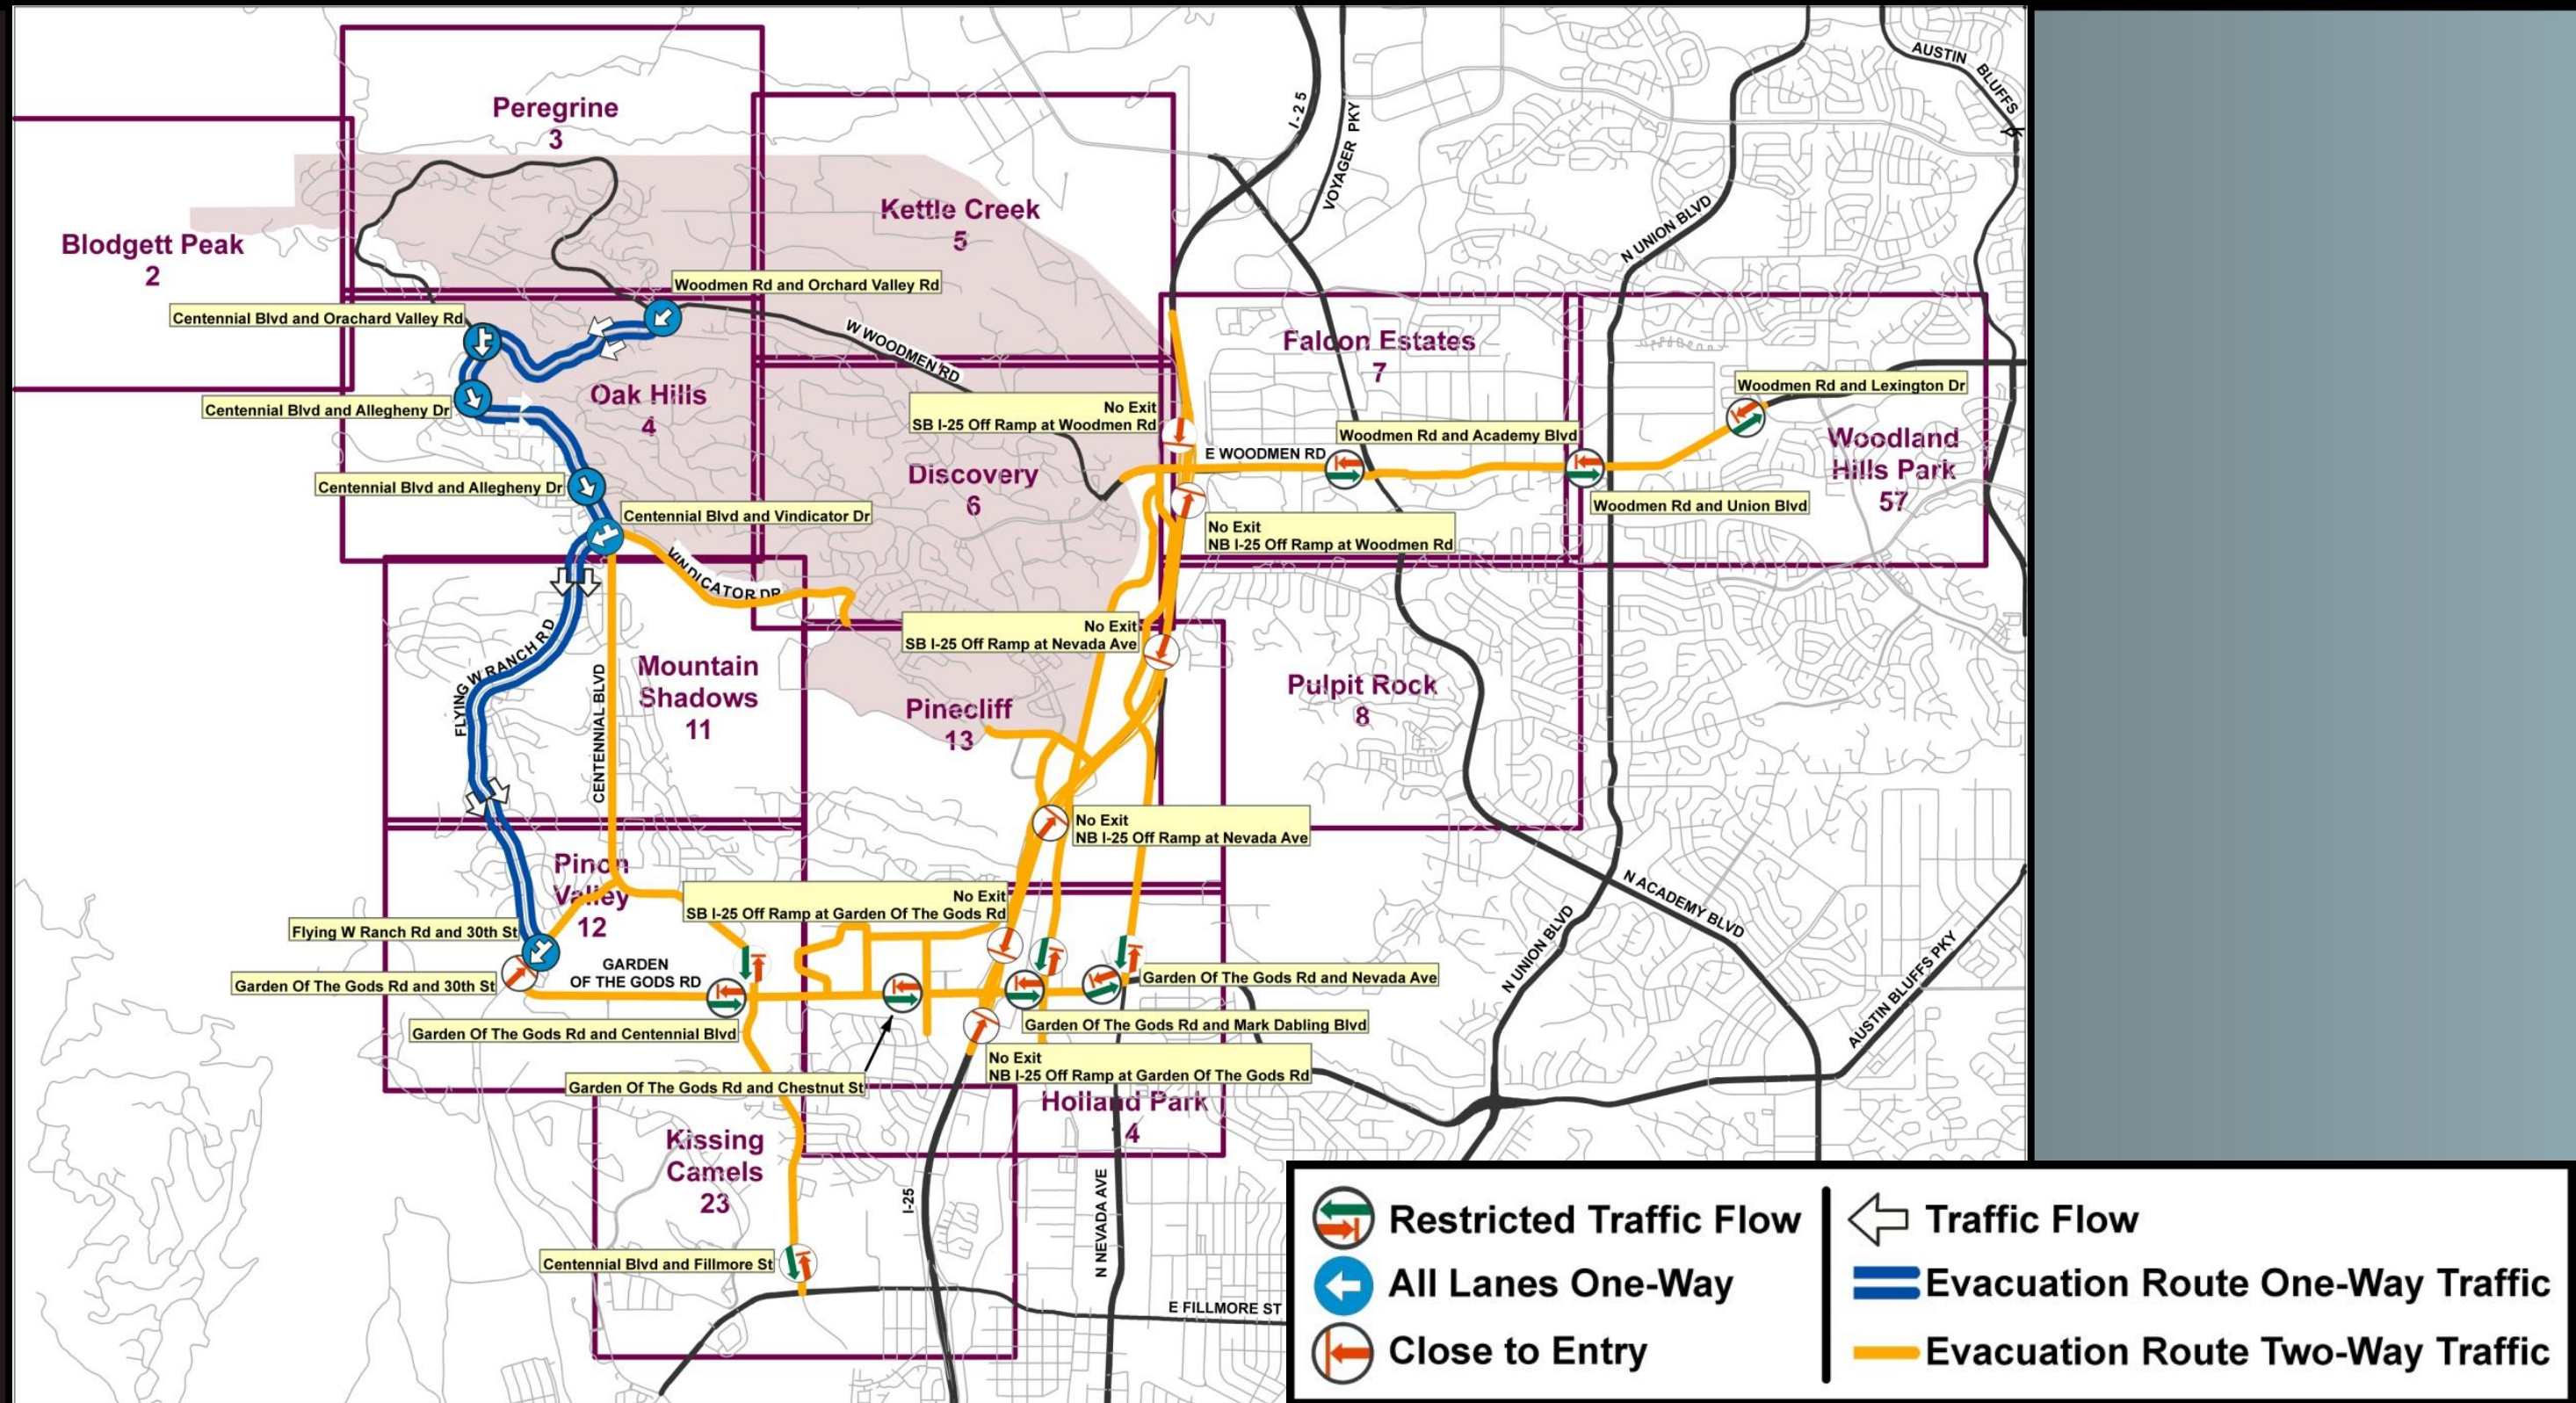

## 25

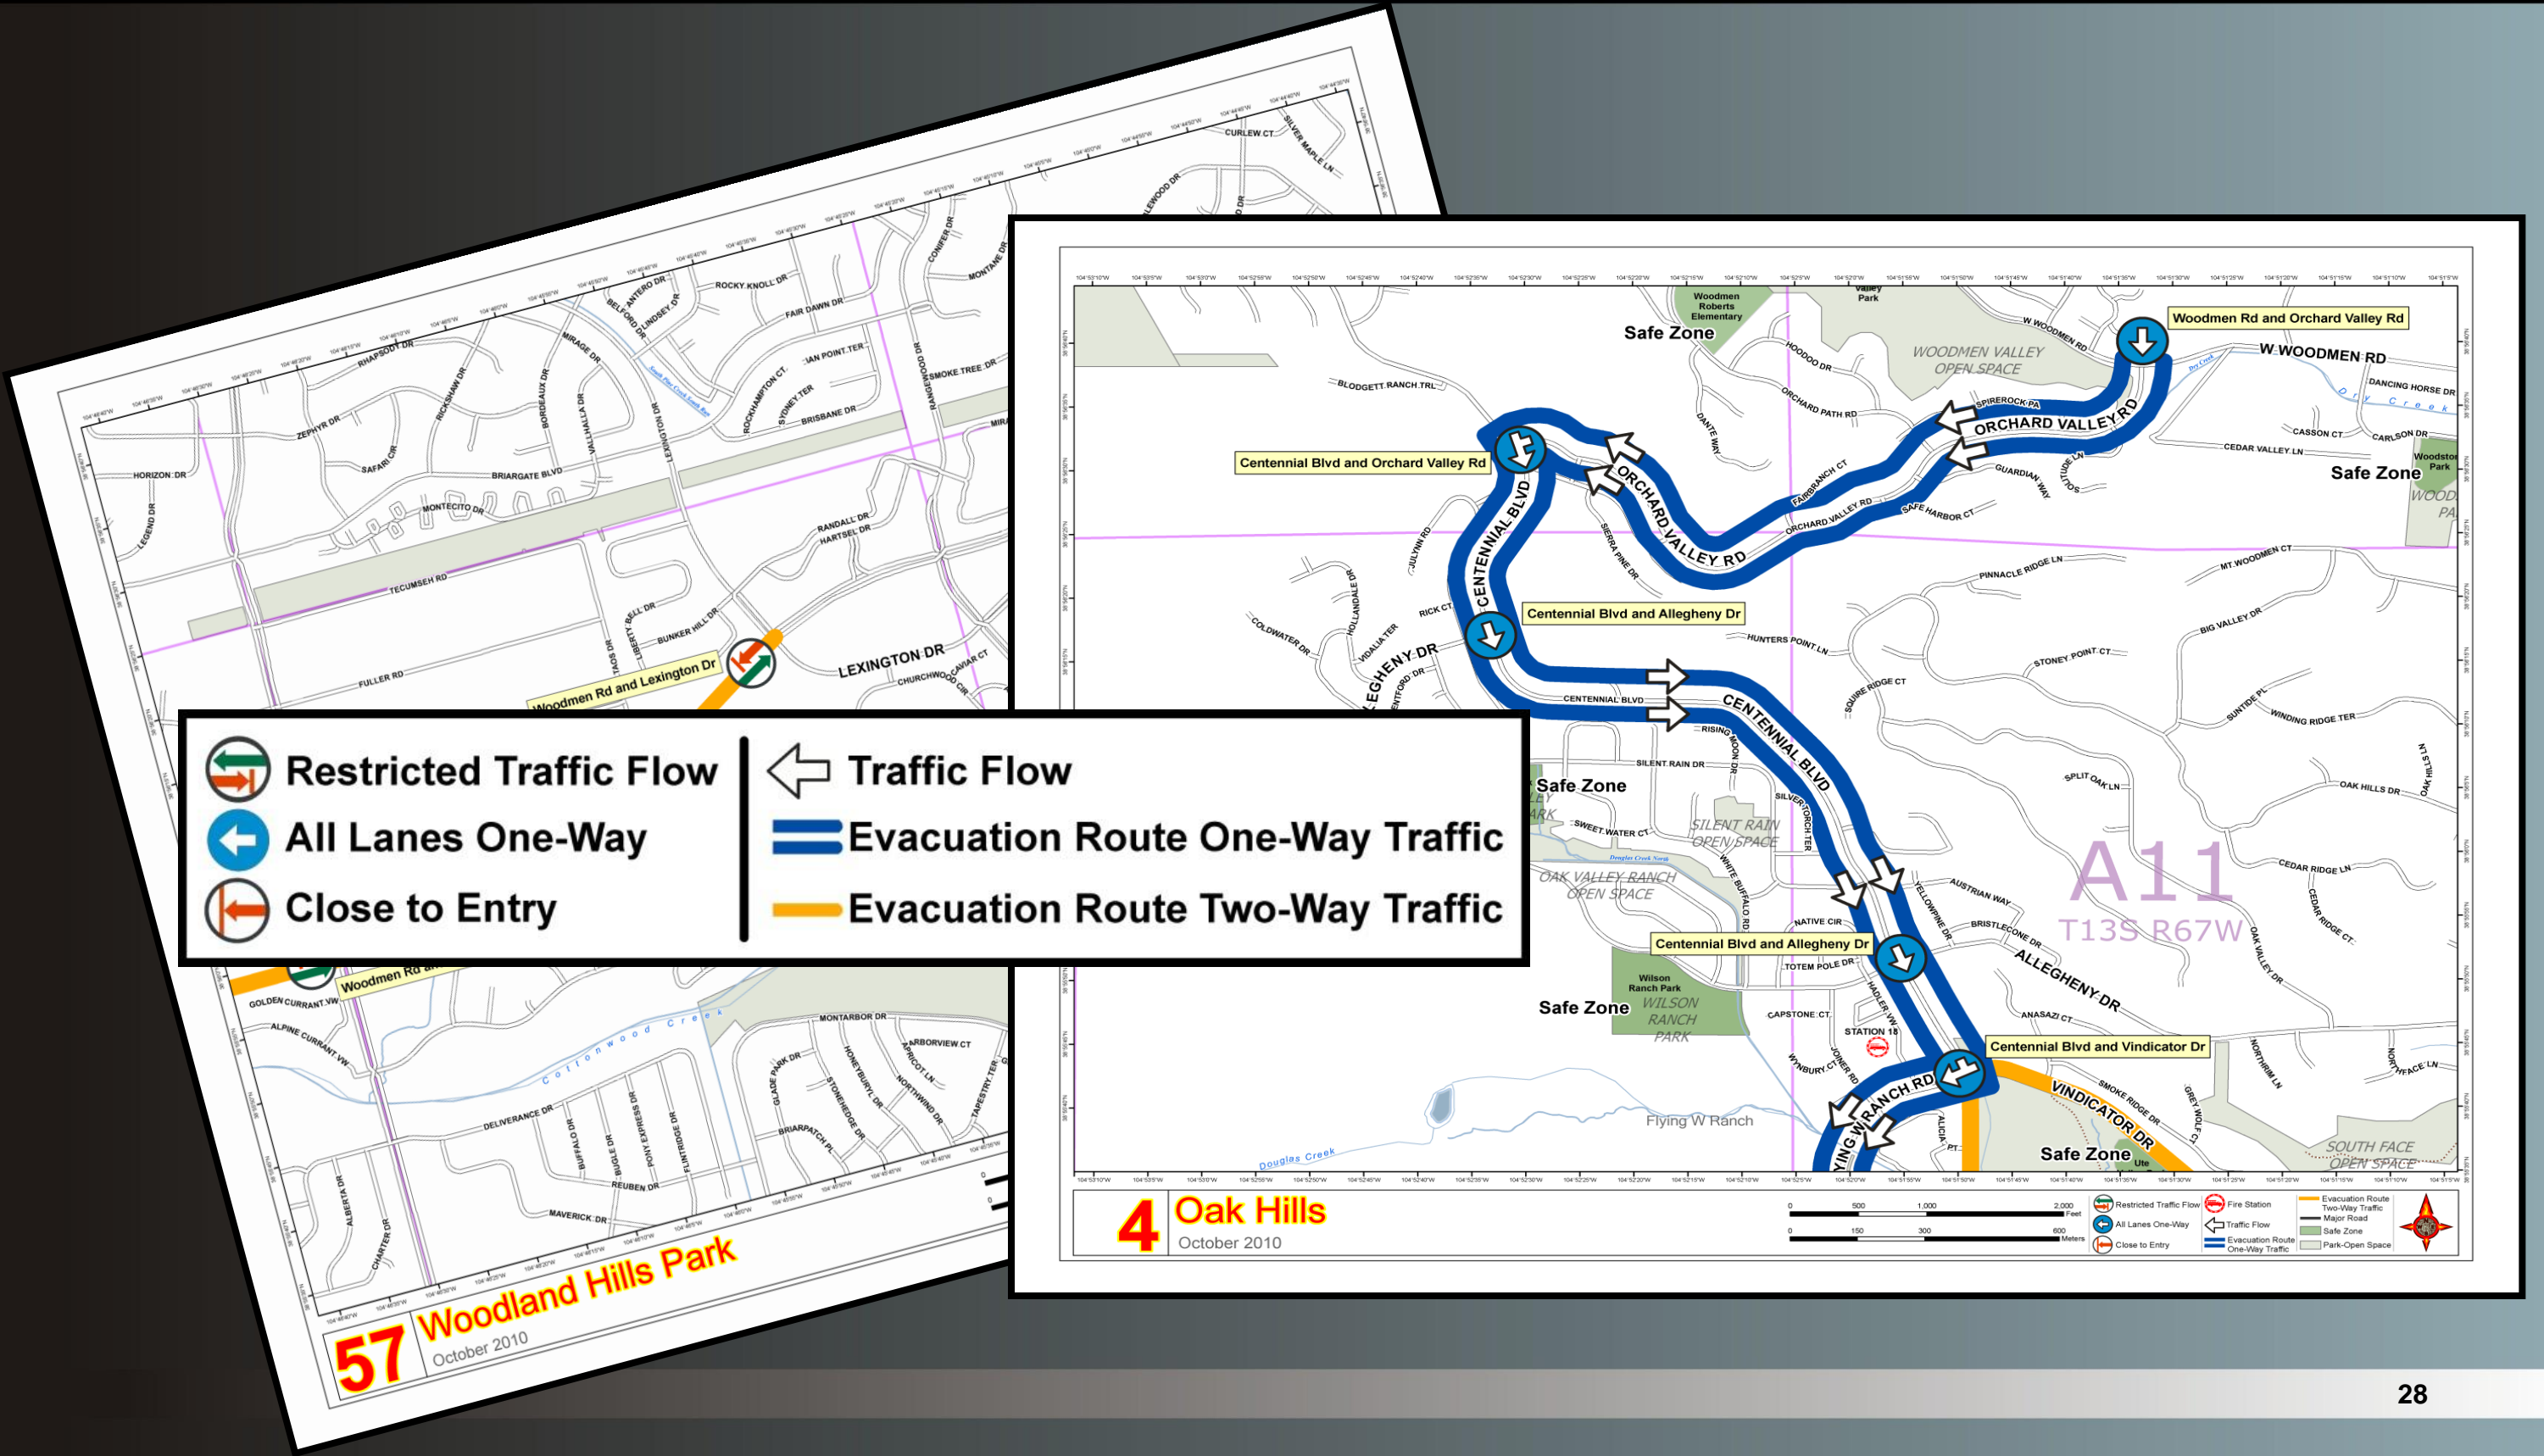

## 26

# District 1-Neighborhood 2 –Traffic Control Plan Overview Sheet

# Did Model Results Match Reality?

29

- ✓ Pre-evacuation of some areas took place over as long as 8 hours
- ✓ On June 26<sup>th</sup> no-notice evacuation was phased over 6 hours
- ✓ The maximum interval between phases was 2 hours
- ✓ Evacuees reported evacuation times of approximately 1.5 hours
- ✓ Model results for optimized traffic control show link V/C ratios of 1.3 to 1.67 – coinciding with 1 hour and 18 minutes to 1 hour and 40 minutes

# A Grateful Community Says Thank You to Police and Firefighters 30
