CMAP region for-sale housing starts by year, type, and location, annual Q1 to Q3 only

Note: Metrostudy provides data for new housing developments of ten units or more. Therefore, this analysis does not include smaller developments such as three- and four-unit condo buildings, single-lot infill, or custom homes. This may lead to lower start totals in the City of Chicago and inner-ring suburbs that are built-out and experience more infill development with smaller projects.
