

Louis Berger

Presentation to CMAP Committees

Chicago Region Socioeconomic Forecast

Chicago
Metropolitan
Agency for
Planning

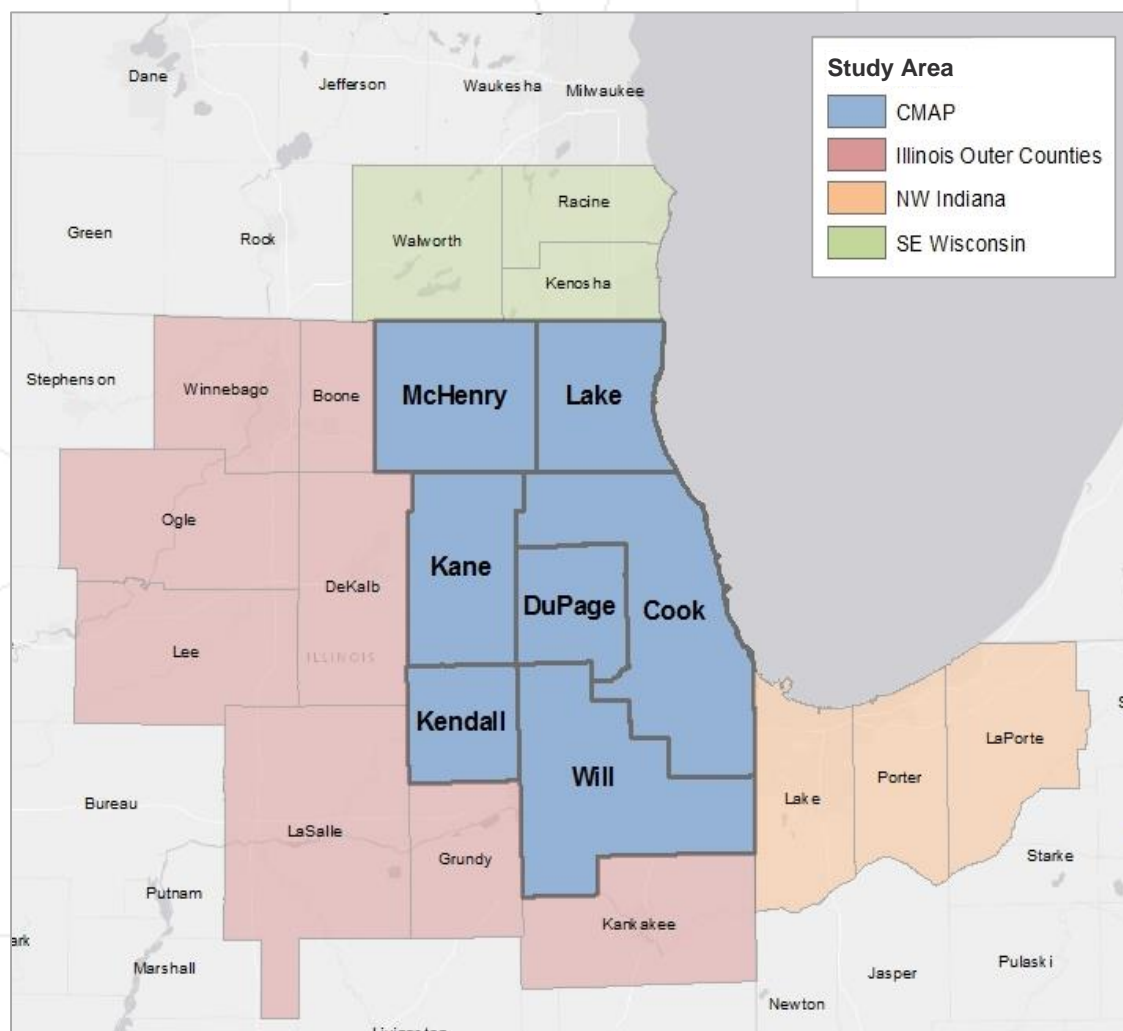

September/October 2016

Project Background

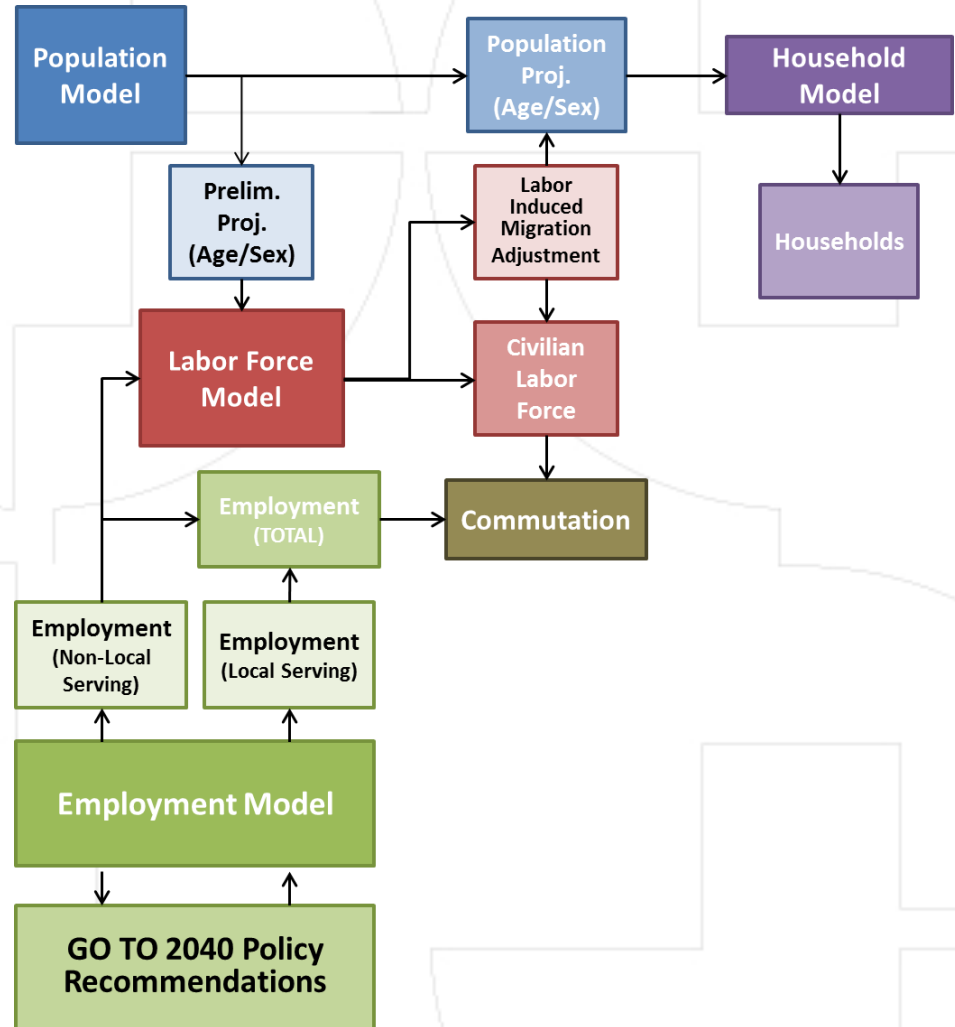

Background

- Louis Berger is developing the regional forecast of population and employment to inform planning efforts
- Forecast estimates the region's population, households, and employment through 2050
- Regional control totals for the 7-County CMAP region will be allocated to subzones
 - *Note:* Outer county forecasts to inform travel demand model

Overview of Methodology

- Economic-demographic model linking regional population and employment
- Population model uses disaggregated cohort component method to utilize age detail
- Employment model harmonizes variety of third-party forecasts to produce consensus outlook
- Labor induced migration adjustment balances labor supply (population) to labor demand (employment)
- Transportation & Education scenario employed from GO TO 2040 recommendations

Outputs

Variable Category	Variable	Model
Employment	<ul style="list-style-type: none">All two-digit NAICS categories	Employment
Households	<ul style="list-style-type: none">Total householdsWorkers in householdsAdults/Children in householdsHouseholder by ageNumber of households in income quantilesBy sex and age range	Population/Household
Non-Institutionalized Group Quarters Population	<ul style="list-style-type: none">GQ typeBy age and sex range	Population
Institutionalized Group Quarters Population	<ul style="list-style-type: none">By age and sex range	Population
Total Population	<ul style="list-style-type: none">By race/ethnicity	Population

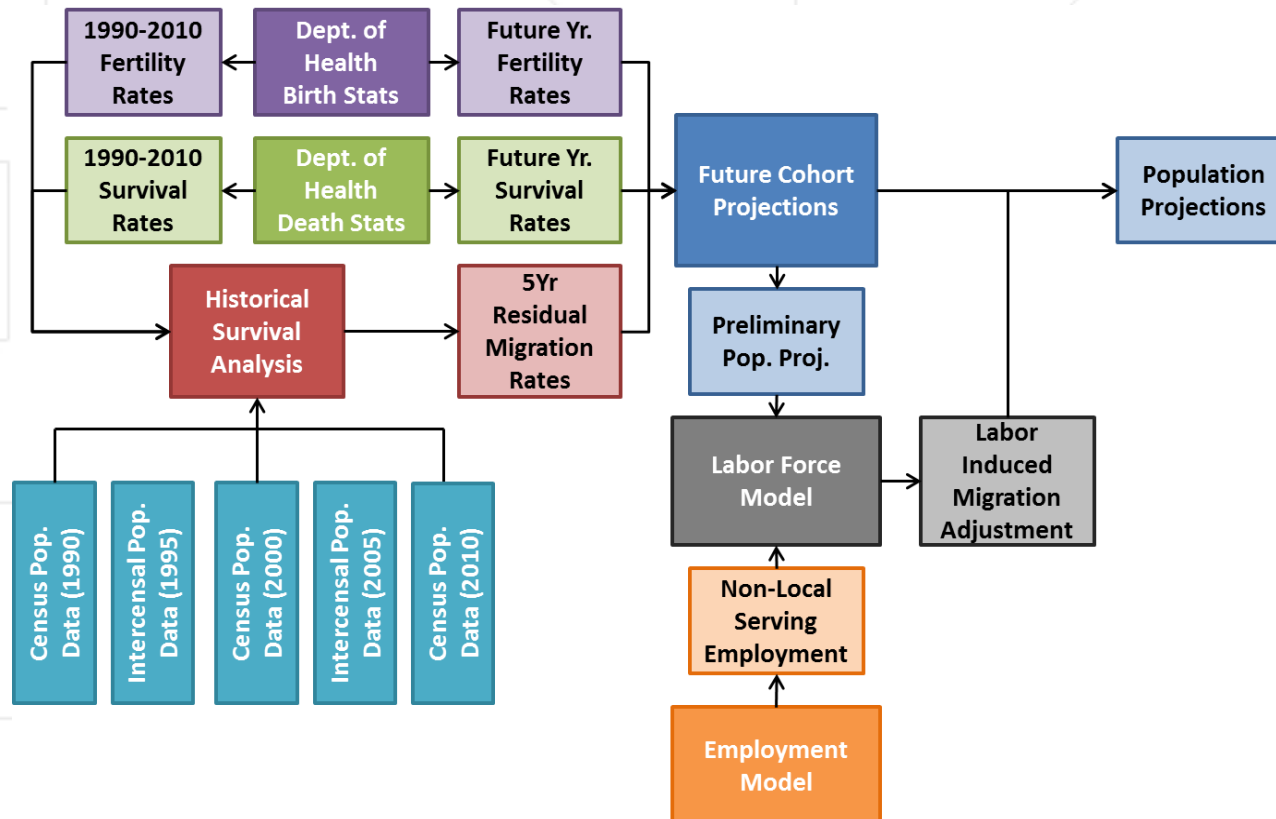

Methodology

Population Model Methodology

Goal: Produce population projections for 5-year age cohorts out to 2050

Steps:

1. Cohort component method
 - Projected Population (P_1) = Base Population (P_0) + Births – Deaths + Net Migration
2. Fertility rates, mortality rates and historic migration rates determine preliminary population projections
3. Labor induced migration adjustment (discussed in subsequent slides) balances initial labor supply (preliminary population) with labor demand (employment model) to create final population projection

Population Model Methodology

Key Assumptions

Births & Fertility Rates

Past trends for age-specific fertility rates to continue:

Declining rates in younger cohorts (15-29) and increasing rates in older cohorts (30-44)

CMAP Region Fertility Rates

Population Model Methodology

Key Assumptions

Deaths and Survival Rates

Survival rate improvements adjusted by Social Security Administration projections

CMAF Region Survival Rates

Population Model Methodology

Key Assumptions

Migration Rates

Model applies range of historical rates (1990-2010)

CMAQ Region Net Migration Rates

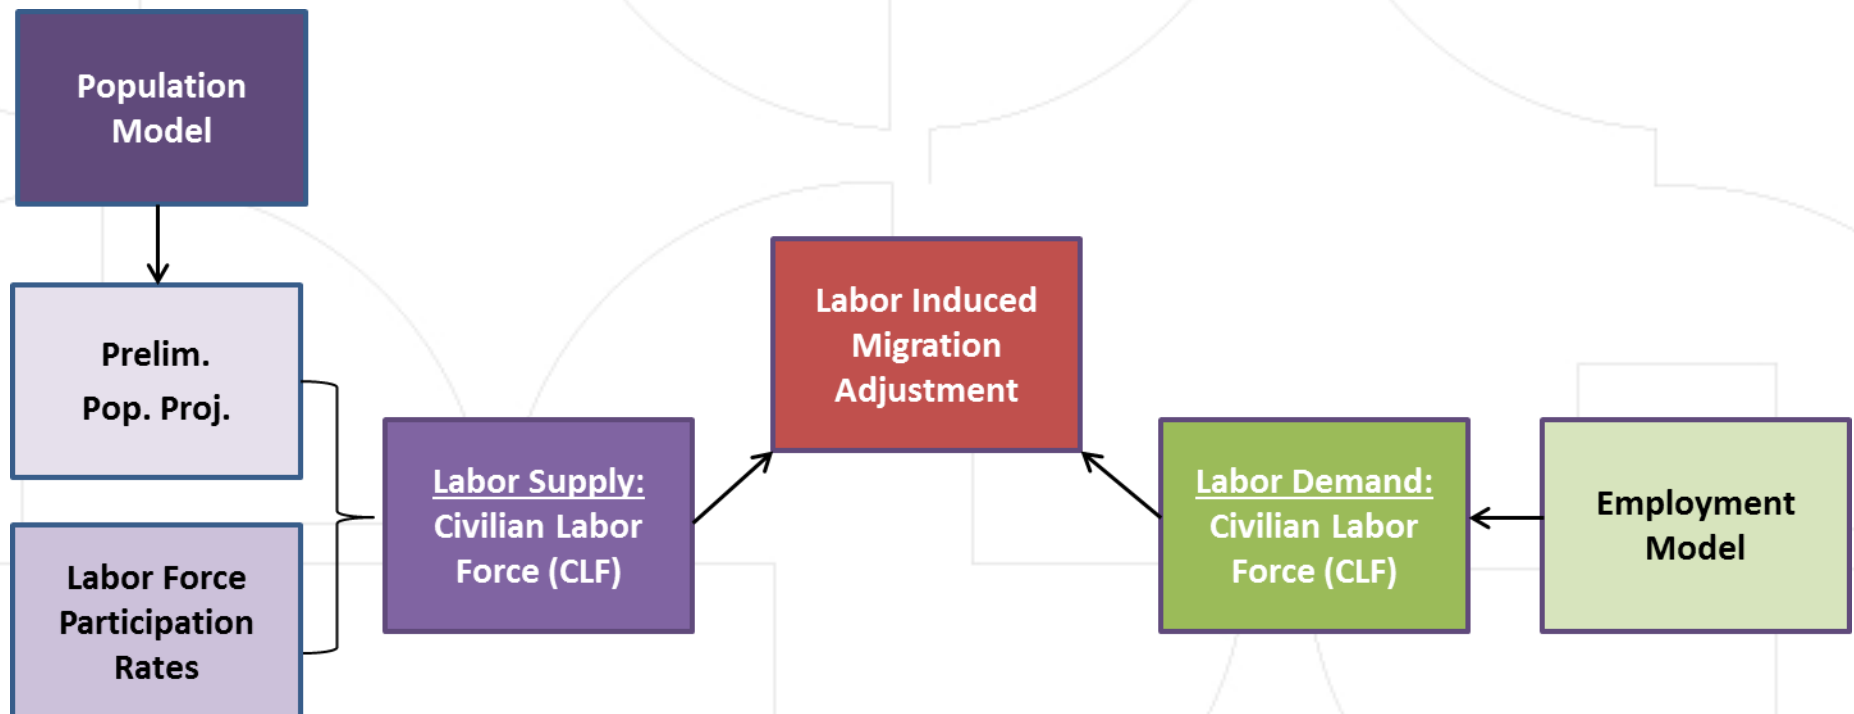

Labor Force Model Methodology

Goal: Produce estimate of labor induced migrants

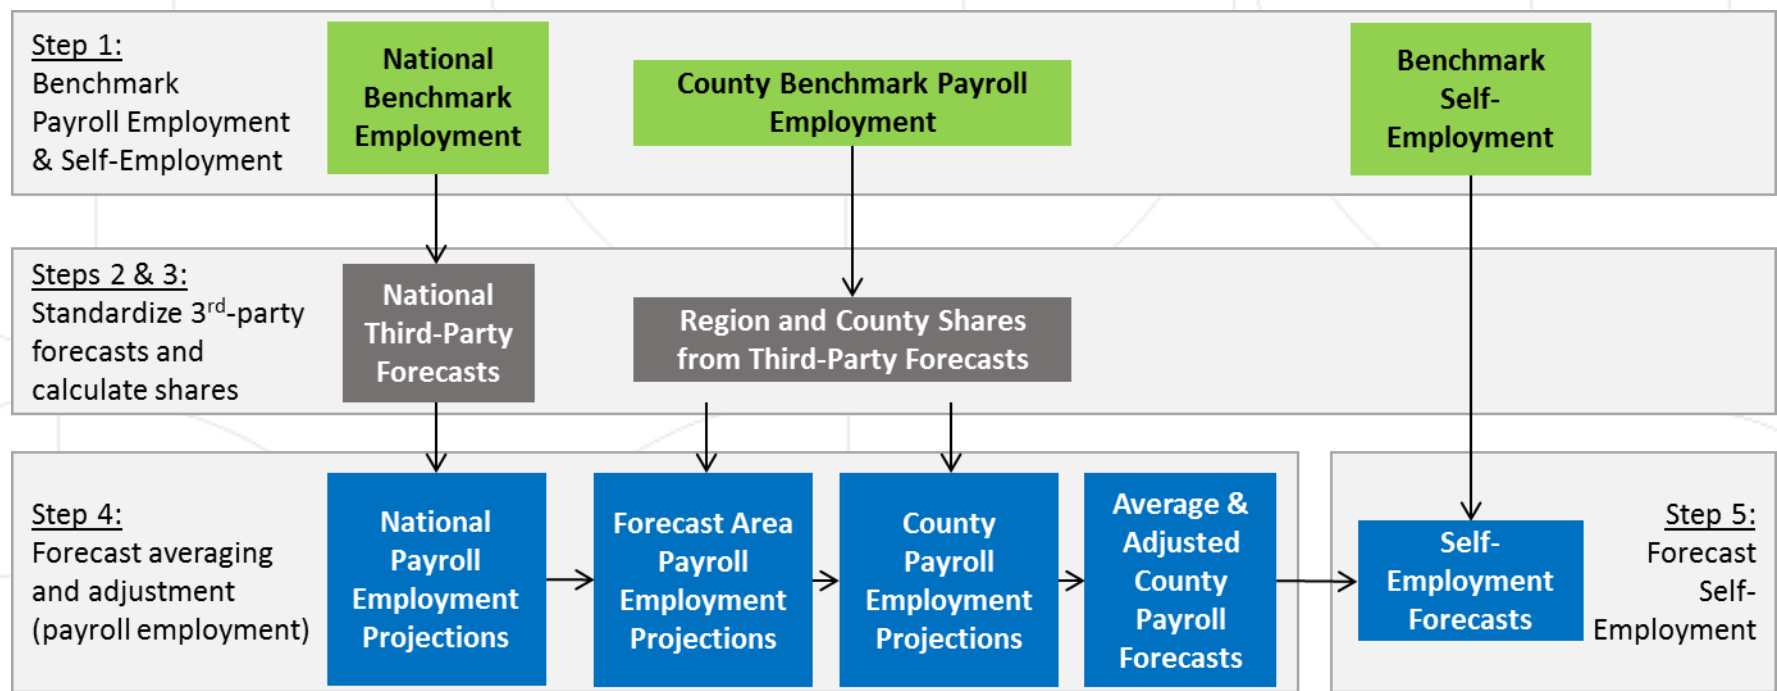

Steps:

1. Convert population projections into estimates of civilian labor force
2. Reconcile labor demand (from employment model) against labor supply (civilian labor force estimated from population model)
3. Estimate number of labor induced migrants to balance supply and demand

Employment Model Methodology

Methodology Overview

Results

Results – Forecast Scenarios

CMAP and the Project Team worked together to create two forecast scenarios for the CMAP region and a shift-share-derived forecast. These scenarios are both consistent with recommendations outlined in GO TO 2040:

1. **Transportation Scenario:** Estimate future regional employment impacts resulting from implementation of GO TO 2040 Major Capital Projects and some arterial expansion.
2. **Education Scenario:** Estimate future regional employment impacts resulting from meeting GO TO 2040 educational attainment goals using regression elasticities found in the academic literature
3. **Transportation + Education Scenario:** Combine (1) and (2).
4. **Shift-Share Scenario:** Use national benchmark series to develop a shift-share-derived regional employment forecast (CMAP completed this step)

The following results reflect Scenario #3, Transportation + Education Scenario. CMAP has selected this as the most likely growth scenario for the region.

Results – Population for CMAP Region

- Annual rate of population growth expected to be slower between 2010-2050 as compared to 1990-2010
- Population expected to age over forecast horizon

CMAP Total	1990	2000	2010	2020	2030	2040	2050
	7,300,589	8,146,264	8,431,386	9,019,767	9,617,193	10,215,298	10,784,021

Results – Population for CMAP Region

Race & Ethnicity

- Non-Hispanic White share of population projected to decrease over forecast horizon, with a corresponding increase in the Hispanic share of the population

Results – Households for CMAP Region

- Growth in households projected to rise at slightly higher rate than historical trends
- Declines in average household size expected to continue

	1980	1990	2000	2010	2020	2030	2040	2050
Households	2,498,766	2,633,148	2,925,723	3,088,156	3,412,829	3,727,764	3,987,248	4,223,827

	2010-2050		
	Difference		CAGR
Households	1,135,671	37%	0.79%
Avg. HH Size	(0.18)	-7%	-0.17%

Results – Employment for CMAP Region

- Total wage and salary employment forecasted to reach over 5 million by 2050
- While growth in basic industries fell during the Great Recession, employment growth in local serving industries held steady

Results – Employment for CMAP Region

- Employment growth from 2010-2050 more robust as compared to 1990-2010
- Strongest growth between 2010-2050 expected in Construction; Professional/Technical Services; Administrative/Waste Services; and Accommodation/Food Services
- Declines projected in Manufacturing; and Educational Services

	1990	2000	2010	2020	2030	2040	2050

Next Steps

- Allocation to subzones based on land use, economic, and planning factors
- Committee discussion and review September-February
- Stakeholder workshops:
 - Policies and factors in the beta local allocation tool: November
 - Initial results: February
